Introduction iii

Please refer to the purchase documentation relating to your specific vehicle to confirm each of the features found on your vehicle. For vehicles first sold in Canada, substitute the name “General Motors of Canada Limited” for Chevrolet Motor Division wherever it appears in this manual.

Keep this manual in the vehicle for quick reference.

Canadian Vehicle Owners
Propriétaires Canadiens

A French language manual can be obtained from your dealer, at www.helminc.com, or from:

Helm, Incorporated
Attention: Customer Service
47911 Halyard Drive
Plymouth, MI 48170

Using this Manual

To quickly locate information about the vehicle, use the Index in the back of the manual. It is an alphabetical list of what is in the manual and the page number where it can be found.

The names, logos, emblems, slogans, vehicle model names, and vehicle body designs appearing in this manual including, but not limited to, GM, the GM logo, CHEVROLET, the CHEVROLET Emblem, and SPARK are trademarks and/or service marks of General Motors LLC, its subsidiaries, affiliates, or licensors.

This manual describes features that may or may not be on your specific vehicle either because they are options that you did not purchase or due to changes subsequent to the printing of this owner manual.

Keep this manual in the vehicle for quick reference.

Danger, Warnings, and Cautions

⚠️ Danger

Text marked ⚠️ Danger provides information on risk of fatal injury. Disregarding this information may endanger life.

⚠️ Warning

Text marked ⚠️ Warning provides information on risk of accident or injury. Disregarding this information may lead to injury.

⚠️ Caution

Text marked ⚠️ Caution provides information that may indicate a hazard that could result in injury or death. It could also result in possible damage to the vehicle.

A circle with a slash through it is a safety symbol which means “Do Not,” “Do not do this,” or “Do not let this happen.”

Symbols

The vehicle has components and labels that use symbols instead of text. Symbols are shown along with the text describing the operation or information relating to a specific component, control, message, gauge, or indicator.

⚠️: This symbol is shown when you need to see your owner manual for additional instructions or information.

📖: This symbol is shown when you need to see a service manual for additional instructions or information.
Vehicle Symbol Chart

Here are some additional symbols that may be found on the vehicle and what they mean. For more information on the symbol, refer to the Index.

Initial Drive Information

This section provides a brief overview about some of the important features that may or may not be on your specific vehicle.

For more detailed information, refer to each of the features which can be found later in this owner manual.

Remote Keyless Entry (RKE) System

The RKE transmitter may work up to 60 m (195 ft) away from the vehicle.

With DC Charging Button Shown, Without DC Charging Similar

Press the key release button to extend the key. The key can be used for all locks.

Press once to unlock the driver door. Press a second time within five seconds to unlock all doors.

Press to lock all doors.

Lock and unlock feedback can be personalized. See Vehicle Personalization on page 5-37.

Remote Start

Use remote start to heat or cool the interior when the vehicle is plugged in to maximize electric range by utilizing electricity from the electrical outlet. The vehicle may start to
support the climate control operation. Normal operation of the system will return after the vehicle has been turned on.

**Activating Remote Start**

1. Aim the RKE transmitter at the vehicle.
2. Press and release $\mathcal{Q}$.
3. Immediately, press and hold $\mathcal{U}$ for at least four seconds or until the turn signal lamps flash.

After entering the vehicle during a remote start, press the $\mathcal{O}$ POWER button on the center stack with the brake pedal applied to operate as normal.

The time can be extended on a remote start. See “Extending Vehicle Run Time” under Remote Start on page 2-7.

**Canceling Remote Start**

To cancel a remote start, do any of the following:

- Aim the RKE transmitter at the vehicle and press and hold $\mathcal{U}$ for at least four seconds until the parking lamps turn off.
- Turn on the hazard warning flashers.
- Press the $\mathcal{O}$ POWER button on the center stack, with the brake pedal applied, then press the POWER $\mathcal{O}$ button again to turn the vehicle off.

**Door Locks**

To lock or unlock the doors from outside the vehicle:

- Use the key in the driver door to lock and unlock the door.
- Press $\mathcal{D}$ or $\mathcal{K}$ on the Remote Keyless Entry (RKE) transmitter to lock and unlock the doors.

To lock or unlock the doors from inside the vehicle:

- Press $\mathcal{D}$ or $\mathcal{K}$.
- Use the lock knob on the top of the door panel.

See Door Locks on page 2-8 and Central Locking System on page 2-9.
1-6 In Brief

**Liftgate**

To unlock the liftgate, press 🕰️ on a power door lock switch, or press 🕰️ twice on the Remote Keyless Entry (RKE) transmitter. See Remote Keyless Entry (RKE) System Operation on page 2-3.

To open the liftgate, pull the handle and lift up.

When closing the liftgate, use the pull cup.

To lock the liftgate, press 🕰️ on a power door lock switch or on the RKE transmitter or use the key in the lock cylinder.

See Liftgate on page 2-11.

**Windows**

Press the switch down to open the window. Pull the front of the switch up to close it.

The switches work when the vehicle is in ON/RUN or when Retained Accessory Power (RAP) is active.

See Retained Accessory Power (RAP) on page 9-17 and Power Windows on page 2-16.

**Seat Adjustment**

**Manual Seats**

To adjust the seat:

1. Lift the bar under the front edge of the seat cushion to unlock the seat.
2. Slide the seat to the desired position and release the bar.
3. Try to move the seat back and forth to be sure it is locked in place.
See Seat Adjustment on page 3-3.

**Seat Height Adjuster**

If available, turn the knob to raise or lower the seat.
See Seat Adjustment on page 3-3.

**Reclining Seatbacks**

To recline the seatback:
1. Lift the lever.
2. Move the seatback to the desired position, and then release the lever to lock the seatback in place.
3. Push and pull on the seatback to make sure it is locked in place.

To return the seatback to the upright position:
1. Lift the lever fully without applying pressure to the seatback, and the seatback will return to the upright position.
2. Push and pull on the seatback to make sure it is locked.

See Reclining Seatbacks on page 3-4.

**Second Row Seats**

The rear seatbacks can be folded down to increase cargo space.
See Rear Seats on page 3-6.

**Head Restraint Adjustment**

Do not drive until the head restraints for all occupants are installed and adjusted properly.

To achieve a comfortable seating position, change the seatback recline angle as little as necessary...
1-8 In Brief

while keeping the seat and the head restraint height in the proper position.

See Head Restraints on page 3-2 and Seat Adjustment on page 3-3.

Safety Belts

Refer to the following sections for important information on how to use safety belts properly.

- Safety Belts on page 3-8.
- How to Wear Safety Belts Properly on page 3-9.

Passenger Sensing System

- Lap-Shoulder Belt on page 3-10.
- Lower Anchors and Tethers for Children (LATCH System) on page 3-37.

Passenger Sensing System

The passenger sensing system turns off the front outboard passenger frontal airbag and knee airbag under certain conditions. No other airbag is affected by the passenger sensing system. See Passenger Sensing System on page 3-23 for important information.

The passenger airbag status indicator will be visible on the center display when the vehicle is started. See Passenger Airbag Status Indicator on page 5-13.

Mirror Adjustment

Exterior Mirrors

1. Move the selector switch to L (Left) or R (Right) to choose the driver or passenger mirror.
2. Move the control up, down, or side to side to adjust the mirror.

3. Return the selector switch to the center with done.

See *Power Mirrors on page 2-15*.

**Folding Mirrors**

The vehicle has manual folding mirrors. These mirrors can be folded inward to prevent damage when going through an automatic car wash. To fold, pull the mirror toward the vehicle. Push the mirror outward to return it to the original position.

See *Folding Mirrors on page 2-15*.

**Interior Mirror**

**Adjustment**

Push the tab forward to the daytime position, then adjust the rearview mirror for a clear view of the area behind the vehicle.

**Manual Rearview Mirror**

To avoid glare of the headlamps from behind, pull the tab backward for nighttime use. Push the tab forward for daytime use.

**Steering Wheel Adjustment**

To adjust the steering wheel:

1. Pull the lever down.
2. Move the steering wheel up or down.

3. Pull the lever up to lock the steering wheel in place.

Do not adjust the steering wheel while driving.

**Interior Lighting**

**Dome Lamps**

The dome lamp controls are in the overhead console.

Move the control to change the lamp setting.

**OFF:** Turns the lamps off, even when a door is open.
1-10 In Brief

DOOR: Turns the lamps on automatically when a door is opened.

ON: Turns on the dome lamps.

For more information about interior lighting, see Instrument Panel Illumination Control on page 6-4 or Courtesy Lamps on page 6-4.

Exterior Lighting

There are four positions:

- **D**: Turns on the headlamps together with the parking lamps and instrument panel lights.
- **P**: Turns on the parking lamps including all lamps, except the headlamps.
- **AUTO**: Turns the exterior lamps on and off automatically depending on the exterior light.
- **O**: Turns all the lamps off, except the Daytime Running Lamps (DRL). The DRL automatically turn off when the vehicle is turned off.

See Exterior Lamp Controls on page 6-1 and Daytime Running Lamps (DRL) on page 6-2.

Windshield Wiper/Washer

The windshield wiper/washer lever is on the right side of the steering column.

Move the lever to one of the following positions:

- **HI**: Use for fast wipes.
- **LO**: Use for slow wipes.
**In Brief**

**INT:** Move the lever up to INT for intermittent wipes, then turn the INT band up for more frequent wipes or down for less frequent wipes.

**OFF:** Use to turn the wipers off.

**Windshield Washer**
Pull the windshield wiper lever toward you to spray windshield washer fluid and activate the wipers. See *Windshield Wiper/Washer on page 5-3*. If equipped with a rear window wiper/washer, see *Rear Window Wiper/Washer on page 5-4*.

**Climate Controls**
The heating, cooling, and ventilation for the vehicle can be controlled with this system.

---

**Vehicle Features**

**Radio(s)**
- **✓ VOL ✓**: Press to decrease or increase the volume.
- **○**: Press and hold to turn the power on and off.

**Buttons 1–5:** Press the screen buttons to save and select favorite stations.

For more information about these and other radio features, see *Operation on page 7-4*.

**Storing a Favorite Station**
Stations from all bands can be stored in the favorite lists in any order. Up to five stations can be stored in each of the seven favorite pages and the number of available favorite pages can be set.

To store the station to a position in the list, press the corresponding screen button 1–5 until a beep is heard.
For more information, see “Storing a Station as a Favorite” in AM-FM Radio on page 7-5.

Setting the Clock
See Clock on page 5-5.

Satellite Radio
If equipped, vehicles with a SiriusXM® satellite radio tuner and a valid SiriusXM satellite radio subscription can receive SiriusXM programming.

SiriusXM Satellite Radio Service
SiriusXM is a satellite radio service based in the 48 contiguous United States and 10 Canadian provinces. SiriusXM satellite radio has a wide variety of programming and commercial-free music, coast to coast, and in digital-quality sound. A fee is required to receive the SiriusXM service.

Refer to:
- www.siriusxm.com or call 1-866-635-2349 (U.S.).
- www.xmradio.ca or call 1-877-209-0079 (Canada).

Portable Audio Devices
The vehicle has a 3.5 mm (1/8 in) auxiliary input and a USB port in the center stack. External devices such as iPods®, laptop computers, MP3 players, CD changers, and USB drives may be connected, depending on the audio system.

See Auxiliary Devices on page 7-11.

Bluetooth®
The Bluetooth® system allows users with a Bluetooth-enabled cell phone to make and receive hands-free calls using the vehicle audio system and controls. The Bluetooth-enabled cell phone must be paired with the in-vehicle Bluetooth system before it can be used in the vehicle. Not all phones will support all functions.

See Bluetooth (Overview) on page 7-14 or Bluetooth (Infotainment Controls) on page 7-16.

Steering Wheel Controls
If equipped with audio steering wheel controls, some audio controls can be adjusted at the steering wheel.

 SEEK or SEEK : Press to go to the next or previous radio station, song on an iPod®, or file on a USB device (if equipped).

 : If equipped with Bluetooth or OnStar, press to interact with those systems. See Bluetooth (Overview) on page 7-14 or Bluetooth (Infotainment Controls) on page 7-16 or OnStar Overview on page 14-1.

 / : Press to silence the vehicle speakers only. Press again to turn the sound on. If equipped with OnStar or Bluetooth systems, press to decline an incoming call, to end speech recognition, or to end a current call.

 + or − : Press + or − to increase or decrease the volume.

### Cruise Control

If equipped with cruise control:

 SET/− : Press briefly to set the speed and activate cruise control. If cruise control is already active, use to decrease vehicle speed.

 : Press to disengage cruise control without erasing the set speed from memory.

If equipped with cruise control:

 RES/+ : Press briefly to make the vehicle resume to a previously set speed, or press and hold to accelerate. If cruise control is already active, use to increase vehicle speed.

---

### Driver Information Center (DIC)

The DIC has different displays, which can be accessed by using the DIC buttons to the left of the steering wheel. The DIC displays trip and warning messages if a system problem is detected.
1-14 In Brief

DIC Controls

**CONFIG:** Press to change the instrument cluster display configuration. See Instrument Cluster on page 5-7.

**BACK:** Press to return to the previous screen, exit a screen, or return to the main menu. Press BACK to minimize the DIC menu display.

**SELECT:** Press the center of the knob to select the highlighted item. Turn the knob to scroll through the menu items.

See Driver Information Center (DIC) on page 5-29.

Power Outlets

The accessory power outlets can be used to plug in electrical equipment, such as a cell phone or MP3 player.

The vehicle may have accessory power outlets:
- On the center stack below the climate control.
- On the rear of the center console.

See Power Outlets on page 5-5.

Battery and Efficiency

High Voltage Safety Information

**⚠️ Warning**

Exposure to high voltage can cause shock, burns, and even death. The high voltage components in the vehicle can only be serviced by technicians with special training.

High voltage components are identified by labels. Do not remove, open, take apart, or modify these components. High voltage cable or wiring has orange covering. Do not probe, tamper with, cut, or modify high voltage cable or wiring.

This vehicle has a high voltage battery and a standard 12-volt battery.
If the vehicle is in a crash, the sensing system may shut down the high voltage system. When this occurs, the high voltage battery is disconnected and the vehicle will not start. The SERVICE VEHICLE SOON message in the Driver Information Center (DIC) will be displayed. Before the vehicle can be operated again, it must be serviced at your dealer.

**Warning**

Damage to the high voltage battery or high voltage system can create a risk of electric shock, overheating, or fire.

If the vehicle is damaged from a crash, flood, fire, or other event it may be necessary to have the vehicle inspected. Contact Spark EV Customer Assistance at 1 855-477-2754 (1-855-4SPARKINFO) as soon as possible to determine whether an inspection is needed.

**Charging**

This section explains the process for charging the high voltage battery. Do not allow the vehicle to remain in temperature extremes for long periods without being driven or plugged in. It is recommended that the vehicle be plugged in when temperatures are below 0°C (32°F) and above 32°C (90°F) to maximize high voltage battery life.

It is recommended to fully charge the battery to maximize available vehicle driving range.

When using a 240-volt charging station, it will take approximately seven hours to charge the vehicle from empty to full. When using a 120-volt AC electrical outlet, it will take approximately 20 hours to charge the vehicle with the 12 amp AC current setting, and considerably longer using the default 8 amp AC current setting. Charge times will vary with outside temperature.

There are three ways to program how the vehicle is charged. See Programmable Charging on page 5-20.

If equipped, the vehicle can be charged using DC charging equipment found at service stations and other public locations.

When using a DC charging station with at least 50kW of available power, it will take approximately 20 minutes to recharge from a depleted battery to a level of 80% of the driving range available for use. This time estimate is applicable to nominal temperature ranges. In extreme hot or cold conditions, this...
time may be lengthened. When a full charge is desired, the charging time will be increased.

The charging system may run fans and pumps that result in sounds from the vehicle while it is turned off. Additionally, clicking sounds may be caused by the electrical devices used while charging.

While the charge cord is plugged into the vehicle, the vehicle cannot be driven.

**AC Charging**

**Start Charge**

1. Make sure the vehicle is parked and turned off.

2. Push on the charge port door in and release to open the door.

   In cold weather conditions, ice may form around the charge port door. The charge port door may not open on the first attempt. Remove ice from the area and repeat attempting to open the charge port door.

3. Open the rear hatch, lift the load support floor covering, and remove the charge cord. It is located near the tire sealant and compressor kit. Pull up on the charge cord handle to release it from the handle clip. Lift the charge cord up and rearward to remove it from the vehicle. The vehicle plug is stored as shown.

4. Plug the charge cord into the electrical outlet. See **Electrical Requirements for Battery Charging on page 9-41**. Verify the charge cord status. See the charge cord user guide and
In Brief 1-17

5. Plug in the AC vehicle plug of the charge cord into the charge port on the vehicle. Make sure the AC vehicle plug is fully connected to the AC charge port. If it is not properly seated, the charge may not occur.

6. Verify that the Charging Status Indicator illuminates on top of the instrument panel and a horn chirp occurs. See Charging Status Feedback on page 9-36.

End Charge

1. Unlock the vehicle with the RKE transmitter to disarm the charge cord theft alert.

2. Unplug the vehicle plug of the charge cord from the vehicle. Unlock the vehicle plug of the charge cord from the vehicle by pushing the button on the top of the charge cord plug.

3. Close the charge port door by pressing firmly in the center to latch properly.

4. Unplug the charge cord from the electrical outlet.

5. Place the charge cord into the storage compartment.

Charge Cord

A portable charge cord used to charge the vehicle high voltage battery is stored in the hatch.

Important Information About Portable Electric Vehicle Charging

- Charging an electric vehicle can stress a building’s electrical system more than a typical household appliance.

- Before you plug in to any electrical outlet, have a qualified electrician inspect and verify the electrical system (electrical outlet, wiring, junctions, and
1-18 In Brief

- Protection devices) for heavy-duty service at a 12 amp continuous load.

- Electrical outlets may wear out with normal usage or be damaged over time, making them unsuitable for electric vehicle charging.

- Check the electrical outlet/plug while charging and discontinue use if the electrical outlet/plug is hot, then have the electrical outlet serviced by a qualified electrician.

- When outdoors, plug into an electrical outlet that is weather-proof while in use.

- Mount the charging cord to reduce strain on the electrical outlet/plug.

---

**Warning**

Improper use of portable electric vehicle charge cords may cause a fire, electrical shock, or burns, and may result in damage to property, serious injury, or death.

- Do not use extension cords, multi-outlet power strips, splitters, grounding adaptors, surge protectors, or similar devices.

- Do not use an electrical outlet that is worn or damaged, or one that will not hold the plug firmly in place.

- Do not use an electrical outlet that is on a circuit with other electrical loads.

See the charge cord user guide.

---

**Charge Cord Status Indicators**

See “Charge Cord Status Indicators” in the charge cord user guide.

**Charge Level Selection**

Charge level selection can be made using the Change Charge Level Preference screen on the center stack. See “Charge Level Selection” under Programmable Charging on page 5-20.

---

**Warning**

Using a charge level that exceeds the electrical circuit or electrical outlet capacity may start a fire or damage the electrical circuit. Use the lowest charge level until a qualified electrician inspects your electrical circuit capacity. Use the lowest charge level if the electrical circuit or electrical outlet capacity is not known.
**DC Charging**

**Start Charge**

1. Make sure the vehicle is parked and turned off.

2. Push on the charge port door in and release to open the door.

   In cold weather conditions, ice may form around the charge port door. The charge port door may not open on the first attempt. Remove ice from the area and repeat attempting to open the charge port door.

3. Unlatch the DC charging dust cover and lower it fully.

4. Plug in the DC vehicle plug into the DC charge port on the vehicle. Make sure that the DC vehicle plug is fully connected to the DC charge port. If it is not properly seated then the charge may not occur.

5. Follow the steps listed on the charging station to start charging. The electric parking brake will automatically apply once the charge process has been started.

6. Once charging, the DC vehicle plug will be locked to the DC charge port and cannot be disconnected while charging is active.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not attempt to disconnect the DC vehicle plug while charging is active. This action may damage vehicle or charging station hardware.</td>
</tr>
</tbody>
</table>

**Stop Charge**

Controls on the charging station can be used to stop the charge process at any time.

To stop charging, the stop charge button on the RKE transmitter may also be used. This applies only to DC charging.

Additionally, to stop the charge when inside the vehicle, you may use the stop charging button on the Battery Information Screen.
1-20 In Brief

Stop Charge — Automatic
When the vehicle no longer needs to use power from the charging station, it will stop charging and the DC vehicle plug will be unlocked from the DC charge port.

Energy can still be consumed from the charging station when the vehicle displays and indicators show that the battery is fully charged. This is to ensure the battery is in optimal temperature operating range to maximize vehicle range. See Programmable Charging on page 5-20.

The process can be stopped by using the procedure to stop charging manually.

End Charge
1. Wait until the charging process has been fully stopped and the Charging Status Indicator is no longer solid green.
2. Unplug the vehicle plug of the charge cord from the vehicle. Unlock the vehicle plug of the charge cord from the vehicle by pushing the button on the top of the charge cord plug.
3. Close the DC charging dust cover.

You can confirm the charge cord is connected by looking at the DIC.

4. Close the charge port door by pressing firmly in the center to latch properly.
5. The electric parking brake should be manually disengaged before driving the vehicle.
6. To start another DC charge, remove the DC vehicle plug and reconnect.

Regenerative Braking
Regenerative braking takes some of the energy from the moving vehicle and turns it back into electrical energy. This energy is then stored in the high voltage battery system, contributing to increased energy efficiency.

See Regenerative Braking on page 9-24.

Service

⚠️ Warning

Never try to do your own service on high voltage components. You can be injured and the vehicle can be damaged if you try to do your own service work. Service and repair of these high voltage components should only be performed by a trained service technician with the proper knowledge and tools. See Doing Your Own Service Work on page 10-3.
In Brief 1-21

Performance and Maintenance

Traction Control/ Electronic Stability Control

The Traction Control System (TCS) limits wheel spin. The system turns on automatically every time the vehicle is started.

The StabiliTrak system assists with directional control of the vehicle in difficult driving conditions. The system also turns on automatically every time the vehicle is started.

- To turn off traction control, press and hold the button on the center console behind the shift lever. The traction off light and the StabiliTrak OFF light illuminate. The appropriate DIC messages are displayed. See Ride Control System Messages on page 5-34.

- Press and release the button again to turn on both systems.

See Traction Control/Electronic Stability Control on page 9-25.

Tire Pressure Monitor

This vehicle may have a Tire Pressure Monitor System (TPMS).

- To turn off both traction control and StabiliTrak, press and hold the button, until the traction off light and the StabiliTrak OFF light illuminate. The appropriate DIC messages are displayed. See Ride Control System Messages on page 5-34.

The low tire pressure warning light alerts to a significant loss in pressure of one of the vehicle's tires. If the warning light comes on, stop as soon as possible and inflate the tires to the recommended pressure shown on the Tire and Loading Information label. See Vehicle Load Limits on page 9-10. The warning light will remain on until the tire pressure is corrected.

The low tire pressure warning light may come on in cool weather when the vehicle is first started, and then turn off as the vehicle is driven. This may be an early indicator that the tire pressures are getting low and the tires need to be inflated to the proper pressure.

The TPMS does not replace normal monthly tire maintenance. Maintain the correct tire pressures.

See Tire Pressure Monitor System on page 10-34.
In Brief

Driving for Better Energy Efficiency

Use the following tips to help maximize energy efficiency and range.

In colder temperatures, while these efficiency tips will help, the electric vehicle driving range may be lower due to higher energy usage.

Driving Style

Efficiency Gauge (Instrument Cluster)

The ball indicator should be kept green and in the center of the gauge.

Inefficient acceleration is indicated when the ball turns yellow and travels above the center of the gauge.

Aggressive braking is indicated when the ball turns yellow and travels below the center of the gauge.

Avoid unnecessary rapid accelerations and decelerations.

Electric range is maximized at 80 km/h (50 mph) and below. Higher speeds use more energy and can significantly reduce electric range.

Use cruise control when appropriate.

Plan ahead for decelerations and coast whenever possible. For example, do not rush to traffic signals.

Do not shift to N (Neutral) to coast. The vehicle recovers energy while coasting and braking in D (Drive) or L (Low).

Drive Mode and PRNDL Selection

Use Normal Mode when possible.

Sport Mode provides more responsive acceleration than Normal Mode but can reduce efficiency.

Use L (Low) in heavy stop-and-go traffic or when traveling downhill. L (Low) requires less brake pedal application and provides a controlled, efficient way to slow the vehicle down.

Climate Setting

Using the heat and air conditioning systems decreases the energy available for electric driving.

Optimal energy efficiency is achieved with the heat, air conditioning, and fan turned off.

Operating with the TEMP button off is the most energy efficient climate setting as long as 0 is not selected.

Use the heated seat feature instead of climate settings. Heating the seat uses less energy than heating the vehicle interior.
Use remote start to heat or cool the interior when the vehicle is plugged in to maximize the electric range by utilizing electricity from the electrical outlet.

In hot weather, avoid parking in direct sunlight or use sunshades inside the vehicle.

Turn off the front and rear window defog/defrost when they are no longer needed.

Avoid driving with the windows open at highway speeds.

**Vehicle Charging/Maintenance**

**Charging**

Keep the vehicle plugged in, even when fully charged, to keep the battery temperature ready for the next drive. This is important when outside temperatures are extremely hot or cold.

**Maintenance**

Always keep the tires properly inflated and the vehicle properly aligned.

The weight of excess cargo in the vehicle affects efficiency and range. Avoid carrying more than is needed. Avoid unnecessary use of electrical accessories. Power used for functions other than propelling the vehicle will reduce EV range.

Using a rooftop carrier will reduce efficiency due to additional weight and drag.

**Roadside Assistance Program**

U.S.: 1-888-811-1926

TTY Users (U.S. Only): 1-888-889-2438

Canada: 1-800-268-6800

As the owner of a new Chevrolet, you are automatically enrolled in the Roadside Assistance program. See *Roadside Assistance Program* on page 13-5.

**OnStar®**

If equipped, this vehicle has a comprehensive, in-vehicle system that can connect to a live Advisor for Emergency, Security, Navigation, Connection, and Diagnostic Services. See *OnStar Overview on page 14-1.*

---

**Warning**

Leaving children in a vehicle with a Remote Keyless Entry (RKE) transmitter is dangerous and children or others could be seriously injured or killed. They could operate the power windows or other controls or make the vehicle move. The windows will function with the RKE transmitter in the vehicle, and children or others could be caught in the path of a closing window. Do not leave children in a vehicle with an RKE transmitter.
2-2 Keys, Doors, and Windows

The key that is part of the RKE transmitter can be used for all locks.

With DC Charging Button Shown, Without DC Charging Similar

- Press the key release button on the RKE transmitter to extend the key.
- Press the key release button and fold the key blade to retract the key.

The key has a bar-coded key tag that the dealer or qualified locksmith can use to make new keys. Store this information in a safe place, not in the vehicle.

See your dealer if a replacement key or an additional key is needed.

If it becomes difficult to turn the key in a vehicle lock, inspect the key blade for debris. Periodically clean with a brush or pick.

If locked out of the vehicle, call the Roadside Assistance Center. See Roadside Assistance Program on page 13-5. With an active OnStar subscription, an OnStar Advisor may remotely unlock the vehicle. See OnStar Overview on page 14-1.

Remote Keyless Entry (RKE) System

If there is a decrease in the RKE operating range:

- Check the distance. The transmitter may be too far from the vehicle.
Remote Keyless Entry (RKE) System Operation

The RKE transmitter functions may work up to 60 m (195 ft) away from the vehicle. Other conditions, such as those previously stated, can impact the performance of the transmitter.

Check the location. Other vehicles or objects may be blocking the signal.

Check the transmitter's battery. See “Battery Replacement” later in this section.

If the transmitter is still not working correctly, see your dealer or a qualified technician for service.

With DC Charging Button Shown, Without DC Charging Similar

( Unlock): Press once to unlock the driver door. Press a second time within five seconds to unlock all doors.

The hazard warning lamps will flash twice each time the button is pressed and the anti-theft alarm system will be disarmed. See Vehicle Alarm System on page 2-12.

( Lock): Press to lock all doors. The hazard warning lamps will flash once and the anti-theft alarm system will be armed. See Vehicle Alarm System on page 2-12.

If the driver door is open when ( Lock) is pressed, all doors lock and then the driver door will unlock if the Unlocked Door Anti Lock Out feature is enabled through the vehicle personalization. See “Unlocked Door Anti Lock Out” under Vehicle Personalization on page 5-37. This may vary based on vehicle personalization.

( Panic Alarm): Press and release one time to initiate vehicle locator. The exterior lamps flash and the horn chirs three times. Press and hold for three seconds to sound the panic alarm. The horn sounds and the turn signals flash for 30 seconds. Press again or start the vehicle to cancel the panic alarm.
2-4 Keys, Doors, and Windows

(Remote Start): Press and release and then immediately press and hold for at least four seconds to start the vehicle’s heating or air conditioning systems and rear window defogger from outside the vehicle using the RKE transmitter. See Remote Start on page 2-7.

(Stop Charge): If equipped with DC charging, press and hold to stop the charge. See Plug-In Charging on page 9-32.

Programming Transmitters to the Vehicle

Only RKE transmitters programmed to this vehicle will work. If a transmitter is lost or stolen, a replacement can be purchased and programmed through your dealer. When the replacement transmitter is programmed to this vehicle, all remaining transmitters must also be reprogrammed. Any lost or stolen transmitters will no longer work once the new transmitter is programmed. Each vehicle can have up to eight transmitters matched to it.

Programming with a Recognized Transmitter

A new transmitter can be programmed to the vehicle when there is one recognized transmitter. To program, the vehicle must be off and all of the transmitters, both currently recognized and new, must be with you.

1. Remove the rubber cap on the steering column. Press the button on the recognized transmitter to extend the key blade. Insert the key blade into the transmitter slot.

2. Insert the vehicle key of the new transmitter into the key lock cylinder on the outside of the driver door and turn the key to the unlock position five times within 10 seconds. The Driver Information Center (DIC) displays READY FOR REMOTE #2, 3, 4 or 5.

3. Remove the recognized key and place the new transmitter into the transmitter slot.

4. Press the POWER button. When the transmitter is learned, the DIC will show that it is ready to program the next transmitter.
5. Remove the transmitter from the transmitter pocket and press 📣.
   To program additional transmitters, repeat Steps 3–5. When all additional transmitters
   are programmed, press and hold the 🔴 POWER button for 12 seconds to exit programming
   mode. Replace the plastic trim piece from the small storage area.

Programming without a Recognized Transmitter
Program a new key to the vehicle when a recognized key is not available. Canadian regulations
require that owners see their dealer.

This procedure will take approximately 30 minutes to complete. The vehicle must be off
and all of the transmitters you wish to program must be with you.

1. Insert the vehicle key of the transmitter into the key lock cylinder on the outside of the driver door and turn the key to the unlock position five times within 10 seconds.
   The Driver Information Center (DIC) displays REMOTE LEARN PENDING, PLEASE WAIT.

2. Wait for 10 minutes until the DIC displays PRESS ENGINE START BUTTON TO LEARN and then press the 🔴 POWER button.
   The DIC displays will again show REMOTE LEARN PENDING, PLEASE WAIT.

3. Repeat Step 2 two additional times. After the third time all previously known transmitters will no longer work with the vehicle. Remaining transmitters can be relearned during the next steps.
   The DIC display should now show READY FOR REMOTE # 1.

4. Remove the rubber cap on the steering column. Press the button on the recognized
2-6 Keys, Doors, and Windows

transmitter to extend the key blade. Insert the key blade into the transmitter slot.

5. Press the POWER button. When the transmitter is learned the DIC will show that it is ready to program the next transmitter.

6. Remove the transmitter from the transmitter slot and press \( \text{ } \). To program additional transmitters, repeat Steps 4–6. When all additional transmitters are programmed, press and hold the POWER button for 12 seconds to exit programming mode. Replace the plastic trim piece from the small storage area.

Starting the Vehicle with a Low Transmitter Battery

If the transmitter battery is weak or there is interference with the signal, the DIC may display NO REMOTE DETECTED or PLACE KEY IN TRANSMITTER POCKET when you try to start the vehicle. The REPLACE BATTERY IN REMOTE KEY message may also display at this time.

To start the vehicle:

1. Remove the rubber cap on the steering column.

2. Extend the key blade and place the blade into the slot.

3. With the vehicle in P (Park) or N (Neutral), press the brake pedal and the POWER button on the center stack. See Power Button on page 9-14.

Replace the transmitter battery as soon as possible.

Battery Replacement
Caution

When replacing the battery, do not touch any of the circuitry on the transmitter. Static from your body could damage the transmitter.

To replace the battery:
1. Extend the key blade and open the battery cover on the back of the unit.
2. Remove the used battery. Avoid touching the circuit board to other components.
3. Insert the new battery, positive side facing down toward the base.
4. Reassemble the battery cover.
5. Check the operation of the transmitter with the vehicle.

Remote Start
Use remote start to heat or cool the interior when the vehicle is plugged in to maximize electric range by utilizing electricity from the electrical outlet. Normal operation of the system will return after the vehicle has been turned on.

(Remote Vehicle Start): This button will be on the RKE transmitter if the vehicle has remote start.

The climate control system will use the previous settings during a remote start. The rear defog may come on during remote start based on cold ambient conditions. The rear defog indicator light does not come on during remote start.

Laws in some local communities may restrict the use of remote starters. For example, some laws require a person using remote start to have the vehicle in view. Check local regulations for any requirements.

If the vehicle is low on electricity, do not use the remote start feature. The vehicle may run out of electricity.

The RKE transmitter range may be less while the vehicle is running.

Other conditions can affect the performance of the transmitter. See Remote Keyless Entry (RKE) System on page 2-2.

Activating the Remote Start
To start the vehicle using the remote start feature:
1. Aim the RKE transmitter at the vehicle.
2. Press and release  
3. Immediately press and hold  for at least four seconds or until the turn signal lamps flash.
4. The vehicle will shut off after 20 minutes unless a time extension is done or  POWER button is pressed.
2-8 Keys, Doors, and Windows

After entering the vehicle during a remote start, press \( \text{POWER} \) on the center stack with the brake pedal applied to operate as normal.

Extending Vehicle Run Time

The vehicle run time can also be extended by another 20 minutes, if during the first 20 minutes Steps 1–3 are repeated while the vehicle is running. This provides a total of 40 minutes.

The remote start can only be extended once.

A maximum of two remote starts, or a single start with an extension, are allowed between ignition cycles.

For additional remote starts, press the \( \text{POWER} \) first.

Canceling a Remote Start

To cancel a remote start, do one of the following:

- Turn on the hazard warning flashers.
- Press \( \text{POWER} \) on the center stack with the brake pedal applied, then press \( \text{POWER} \) again to turn the vehicle off.

Door Locks

\[ \text{Warning} \]

Unlocked doors can be dangerous.

- Passengers, especially children, can easily open the doors and fall out of a moving vehicle. When a door is locked, the handle will not open it. The chance of being thrown out of the vehicle in a crash is increased if the doors are not locked. So, all passengers should wear safety belts properly and the doors should be locked whenever the vehicle is driven.

- Young children who get into unlocked vehicles may be unable to get out. A child can be overcome by extreme heat and can suffer permanent

(Continued)
Warning (Continued)

injuries or even death from heat stroke. Always lock the vehicle whenever leaving it.

- Outsiders can easily enter through an unlocked door when you slow down or stop the vehicle. Locking the doors can help prevent this from happening.

To lock or unlock the doors from outside the vehicle:

- Use the key in the driver door to lock and unlock the door.
- Press Q or K on the Remote Keyless Entry (RKE) transmitter to lock and unlock the doors. See Remote Keyless Entry (RKE) System Operation on page 2-3.

To lock or unlock the doors from inside the vehicle:

- Press Q or K.
- Use the lock knob on the top of the door panel.

Central Locking System

This system allows the doors and liftgate to be locked and unlocked by using the Remote Keyless Entry (RKE) transmitter or by using the key in the driver door. See Door Locks on page 2-8 and Liftgate on page 2-11.

Door Ajar Reminder

If one of the doors or the liftgate is not closed properly while the ignition is on, the door ajar light on the instrument cluster comes on and stays on until the doors are closed. See Door Ajar Light on page 5-19.

Delayed Locking

This feature is activated through Vehicle Personalization. See Vehicle Personalization on page 5-37.

When delayed locking is active and Q is pressed on the door lock switch while the door is open, a chime will sound three times.

When all the doors are closed, the doors will lock automatically after five seconds. If a door is reopened before five seconds have elapsed, the five-second timer will reset once all the doors are closed again.
2-10 Keys, Doors, and Windows

Press Q on the door lock switch again or press Q on the RKE transmitter to override this feature and lock the doors immediately.

**Automatic Door Locks**

The doors will lock automatically when all doors are closed, the ignition is on, and the shift lever is moved out of P (Park).

To unlock the doors:
- Press K on a door.
- Shift the transmission into P (Park).

Automatic door unlocking can be programmed through the Driver Information Center (DIC). See Vehicle Personalization on page 5-37.

**Lockout Protection**

If the vehicle is in ACC/ACCESSORY or ON/RUN/START and the power door lock switch is pressed with the driver door open, all the doors will lock and only the driver door will unlock.

Lockout Protection can be manually overridden with the driver door open by pressing and holding Q on the power door lock switch.

If Unlocked Door Anti Lockout is turned on and the vehicle is off, the driver door is open, and locking is requested, all the doors will lock and only the driver door will unlock. The Unlocked Door Anti Lockout feature can be turned on or off using the vehicle personalization menus. See Vehicle Personalization on page 5-37.

**Safety Locks**

The vehicle has rear door safety locks on each rear door that prevent passengers from opening the rear doors from the inside.

**Using the Rear Door Safety Lock**

1. Move the lever up to lock.
2. Close the door.
3. Repeat Steps 1 and 2 for the other rear door lock.

Using the Rear Door Safety Lock
Keys, Doors, and Windows 2-11

**Caution**

Pulling the inside door handle while the rear door safety locks are engaged could damage your vehicle. Do not pull the inside door handle while the rear door safety locks are engaged.

The rear doors on the vehicle cannot be opened from the inside while this feature is in use.

**Opening a Rear Door When the Safety Lock Is On**

1. Unlock the door from the inside.
2. Open the door from the outside.

For the rear doors to open from the inside, the safety locks have to be moved back to the unlock position.

**Canceling a Rear Door Safety Lock**

1. Unlock the door from the inside and open the door from the outside.
2. Move the lever down to unlock.
3. Repeat Steps 1 and 2 for the other rear door lock.

The rear door locks can now be locked and unlocked normally.

**Liftgate**

**Caution**

To avoid damage to the liftgate or liftgate glass, make sure the area above and behind the liftgate is clear before opening it.

To lock or unlock the liftgate from the outside, use the key in the liftgate lock or press \( \square \) or \( \square \) on the RKE transmitter. See Remote Keyless Entry (RKE) System Operation on page 2-3.
2-12 Keys, Doors, and Windows

Vehicle Security
This vehicle has theft-deterrent features; however, they do not make the vehicle impossible to steal.

Vehicle Alarm System
This vehicle has an anti-theft alarm system.

Arming the Alarm System
1. Close the trunk and the liftgate, then turn off the vehicle.
2. Lock the vehicle in one of three ways:
   - Use the RKE transmitter.
   - Use the Keyless Access system.
   - With a door open, press on the interior of the door.

To lock or unlock the liftgate from the inside, press or .
To open the liftgate, pull the handle and lift up.
When closing the liftgate, use the pull cup.
See Central Locking System on page 2-9.
3. After 30 seconds the alarm will arm, pressing \( \text{Q} \) on the RKE transmitter a second time will bypass the 30-second delay and immediately arm the alarm system.

The vehicle alarm system will not arm if the doors are locked with the key.

If the driver door is opened without first unlocking with the RKE transmitter, the horn will chirp and the lights will flash to indicate pre-alarm. If the vehicle is not started, or the door is not unlocked by pressing \( \text{Q} \) on the RKE transmitter during the 10-second pre-alarm, the alarm will be activated.

If a door or the liftgate is opened without first disarming the system, the turn signals will flash and the horn will sound for about 30 seconds. The alarm system will then re-arm to monitor for the next unauthorized event.

**Disarming the System**

Do one of the following to disarm the alarm system or turn off the alarm if it has been activated:

- Press \( \text{Q} \) on the RKE transmitter.
- Unlock the vehicle using the Keyless Access system.
- Start the vehicle.

To avoid setting off the alarm by accident:

- Lock the vehicle after all occupants have left the vehicle.
- Always unlock a door with the RKE transmitter or use the Keyless Access system.

Unlocking the driver door with the key will not disarm the system or turn off the alarm.

To turn off the alarm sound and lights without disarming or arming the system:

- Press any button on the RKE transmitter.

- Press \( \text{Q} \) on the RKE transmitter. The alarm will re-arm after about 30 seconds.

**Detecting a Tamper Condition**

If \( \text{K} \) is pressed on the RKE transmitter and the horn chirps three times, an alarm occurred previously while the alarm system was armed.

If the alarm has been activated, a message will appear on the DIC. See Security Messages on page 5-35.

**Immobilizer**

**Immobilizer Operation**

This vehicle has a passive theft-deterrent system.

The system does not have to be manually armed or disarmed.

The vehicle is automatically immobilized when the transmitter leaves the vehicle.
### Keys, Doors, and Windows

The immobilization system is disarmed when the ignition button is pushed in and a valid transmitter is found in the vehicle.

The security light on the instrument cluster comes on when there is a problem with arming or disarming the theft-deterrent system.

The system has one or more transmitters matched to an immobilizer control unit in the vehicle. Only a correctly matched transmitter will start the vehicle. If the transmitter is ever damaged, you may not be able to start your vehicle.

When trying to start the vehicle, the security light comes on briefly when the ignition is turned on.

If the vehicle does not start and the security light stays on, there is a problem with the system. Turn the vehicle off and try again after 30 seconds.

If the RKE transmitter appears to be undamaged, try another transmitter, or place the transmitter in the steering ignition slot. See “Starting the Vehicle with a Low Transmitter Battery” under Remote Keyless Entry (RKE) System Operation on page 2-3.

If the vehicle does not start with the other transmitter or when the transmitter is in the steering ignition slot, your vehicle needs service. See your dealer who can service the theft-deterrent system and have a new transmitter programmed to the vehicle.

Do not leave the transmitter or device that disarms or deactivates the theft-deterrent system in the vehicle.

---

### Exterior Mirrors

#### Convex Mirrors

**Warning**

A convex mirror can make things, like other vehicles, look farther away than they really are. If you cut too sharply into the right lane, you could hit a vehicle on the right. Check the inside mirror or glance over your shoulder before changing lanes.

The passenger side mirror is convex shaped. A convex mirror’s surface is curved so more can be seen from the driver seat.
Power Mirrors

1. If equipped, move the selector switch to L (Left) or R (Right) to choose the driver or passenger mirror.

2. Move the control up, down, or side to side to adjust the mirror. Adjust the mirrors so the side and the area behind the vehicle can be seen.

3. Return the selector switch to the center when done.

Folding Mirrors

Manual Folding Mirrors

The vehicle has manual folding mirrors. These mirrors can be folded inward to prevent damage when going through an automatic car wash. To fold, pull the mirror toward the vehicle. Push the mirror outward to return it to the original position.

Folding Mirrors

Manual Folding Mirrors

The vehicle has manual folding mirrors. These mirrors can be folded inward to prevent damage when going through an automatic car wash. To fold, pull the mirror toward the vehicle. Push the mirror outward to return it to the original position.

Interior Mirrors

Interior Rearview Mirrors

Adjust the rearview mirror for a clear view of the area behind your vehicle.

Do not spray glass cleaner directly on the mirror. Use a soft towel dampened with water.

Manual Rearview Mirror

Push the tab forward for daytime use and pull it rearward for nighttime use to avoid glare of the headlamps from behind.
2-16 Keys, Doors, and Windows

Windows

⚠️ Warning

Never leave a child, a helpless adult, or a pet alone in a vehicle, especially with the windows closed in warm or hot weather. They can be overcome by the extreme heat and suffer permanent injuries or even death from heat stroke.

The vehicle aerodynamics are designed to improve electric range performance. This may result in a pulsing sound when either rear window is down and the front windows are up. To reduce the sound, open a front window.

Power Windows

⚠️ Warning

Children could be seriously injured or killed if caught in the path of a closing window. Never leave keys in a vehicle with children. When there are children in the rear seat, use the window lockout button to prevent operation of the windows. See Keys on page 2-1.

The switches on the driver door control all windows. In addition, each passenger door has a switch for its own window.

Press the switch down to open the window. Pull the front of the switch up to close it.

The power windows only operate with the ignition in ON/RUN or when Retained Accessory Power (RAP) is active. See Retained Accessory Power (RAP) on page 9-17.
**Window Lockout**

This feature prevents the rear passenger windows from operating, except from the driver position.

- Press 🗝️ to activate the window lockout.
- Press 🗝️ again to deactivate the window lockout.

**Sun Visors**

Pull the sun visor down to block out glare. Detach the sun visor from the center mount and swing it to the side.

**Visor Vanity Mirror**

The vehicle may have vanity mirrors and card holders on the back of the sun visors. Swing down the sun visor to expose the vanity mirror.

Head Restraints

⚠️ Warning

With head restraints that are not installed and adjusted properly, there is a greater chance that occupants will suffer a neck/spinal injury in a crash. Do not drive until the head restraints for all occupants are installed and adjusted properly.

Adjust the head restraint so that the top of the restraint is at the same height as the top of the occupant’s head. This position reduces the chances of a neck injury in a crash.

Front Seats

The front seats have adjustable head restraints in the outboard seating positions.

To lower the head restraint, press the button, located on the top of the seatback, and push the head restraint down. Try to move the head restraint after the button is released to make sure that it is locked in place.

The front seat outboard head restraints are not designed to be removed.

Rear Seats

The vehicle’s rear seats have adjustable head restraints in the outboard seating positions.

The height of the head restraint can be adjusted. Pull the head restraint up to raise it. Try to move the head restraint to make sure that it is locked in place.
The height of the head restraint can be adjusted. Pull the head restraint up to raise it. Try to move the head restraint to make sure that it is locked in place.

To lower the head restraint, press the button, located on the top of the seatback, and push the head restraint down. Try to move the head restraint after the button is released to make sure that it is locked in place.

If you are installing a child restraint in the rear seat, see “Securing a Child Restraint Designed for the LATCH System” under Lower Anchors and Tethers for Children (LATCH System) on page 3-37.

Front Seats

Seat Adjustment

Manual Seats

⚠️ Warning

You can lose control of the vehicle if you try to adjust a driver seat while the vehicle is moving. Adjust the driver seat only when the vehicle is not moving.
3-4 Seats and Restraints

To adjust the seat:
1. Lift the bar under the front edge of the seat cushion to unlock the seat.
2. Slide the seat to the desired position and release the bar.
3. Try to move the seat back and forth to be sure it is locked in place.

Seat Height Adjuster

If available, turn the knob to raise or lower the seat.

Reclining Seatbacks

⚠️ Warning
If either seatback is not locked, it could move forward in a sudden stop or crash. That could cause injury to the person sitting there. Always push and pull on the seatbacks to be sure they are locked.

To recline the seatback:
1. Lift the lever.
2. Move the seatback to the desired position, and then release the lever to lock the seatback in place.
3. Push and pull on the seatback to make sure it is locked in place.

To return the seatback to the upright position:
1. Lift the lever fully without applying pressure to the seatback, and the seatback will return to the upright position.
2. Push and pull on the seatback to make sure it is locked.

⚠️ Warning
Sitting in a reclined position when the vehicle is in motion can be dangerous. Even when buckled up, the safety belts cannot do their job.

(Continued)
**Warning (Continued)**

The shoulder belt will not be against your body. Instead, it will be in front of you. In a crash, you could go into it, receiving neck or other injuries.

The lap belt could go up over your abdomen. The belt forces would be there, not at your pelvic bones. This could cause serious internal injuries.

For proper protection when the vehicle is in motion, have the seatback upright. Then sit well back in the seat and wear the safety belt properly.

---

**Front Seat Armrest**

Do not have a seatback reclined if the vehicle is moving.

There is an armrest on the inboard side of the driver seat. To raise or lower the armrest, push up or pull down on the armrest.
3-6 Seats and Restraints

Heated Front Seats

⚠️ Warning
If you cannot feel temperature change or pain to the skin, the seat heater may cause burns. To reduce the risk of burns, people with such a condition should use care when using the seat heater, especially for long periods of time. Do not place anything on the seat that insulates against heat, such as a blanket, cushion, cover, or similar item. This may cause the seat heater to overheat. An overheated seat heater may cause a burn or may damage the seat.

The buttons are below the climate control system. To operate, the vehicle must be on.
Press ⛄️ or 🌞 to heat the driver or passenger seat. The indicator light on the control turns on when this feature is on. Press the control again to turn this feature off.

The passenger seat may take longer to heat up.

Rear Seats

Folding the Seatback
Either side of the seatback can be folded down for more cargo space. Fold a seatback only when the vehicle is not moving.

⚠️ Caution
Folding a rear seat with the safety belts still fastened may cause damage to the seat or the safety belts. Always unbuckle the safety belts and return them to their normal stowed position before folding a rear seat.

To fold a seatback down:
1. Remove the rear head restraints. See “Head Restraint Removal and Reinstallation” under Lower Anchors and Tethers for Children (LATCH System) on page 3-37.
2. Slide the front seats forward and place the front seatbacks in the upright position. See Seat Adjustment on page 3-3 and Reclining Seatbacks on page 3-4.

3. Pull up the release knob on the top of the seatback.

4. Fold the seatback forward and down.

5. Repeat Steps 1–4 for the other seatback and seat cushion, if desired.

### Raising the Seatback

**Warning**

If either seatback is not locked, it could move forward in a sudden stop or crash. That could cause injury to the person sitting there. Always push and pull on the seatbacks to be sure they are locked.

**Warning**

With head restraints that are not installed and adjusted properly, there is a greater chance that occupants will suffer a neck/spinal injury in a crash. Do not drive until the head restraints for all occupants are installed and adjusted properly.

**Warning**

A safety belt that is improperly routed, not properly attached, or twisted will not provide the protection needed in a crash. The person wearing the belt could be seriously injured. After raising the rear seatback, always check to be sure that the safety belts are properly routed and attached, and are not twisted.

To return the rear seats to the normal seating position:
3-8 Seats and Restraints

1. Insert the safety belt latch plate into the hole on the side trim before raising the seatback. The safety belt should not cross the seatback locking mechanism when raising the seatback.

2. Lift the seatback up slightly and reinstall the head restraint. See “Head Restraint Removal and Reinstallation” under Lower Anchors and Tethers for Children (LATCH System) on page 3-37.

3. Push the seatback rearward all the way to lock it in place.

4. Push and pull the top of the seatback to be sure it is locked into position.

5. Remove the safety belt from the hole on the side trim.

6. Repeat Steps 1–5 for the other seatback and seat cushion, if necessary.

If added cargo space is not needed, the seatbacks should be kept in the upright, locked position.

---

Safety Belts

This section of the manual describes how to use safety belts properly. It also describes some things not to do with safety belts.

⚠️ Warning

Do not let anyone ride where a safety belt cannot be worn properly. In a crash, if you or your passenger(s) are not wearing safety belts, injuries can be much worse than if you are wearing safety belts. You can be seriously injured or killed by hitting things inside the vehicle harder or by being ejected from the vehicle. In addition, anyone who is not buckled up can strike other passengers in the vehicle.

(Continued)

Warning (Continued)

It is extremely dangerous to ride in a cargo area, inside or outside of a vehicle. In a collision, passengers riding in these areas are more likely to be seriously injured or killed. Do not allow passengers to ride in any area of the vehicle that is not equipped with seats and safety belts.

Always wear a safety belt, and check that all passenger(s) are restrained properly too.

This vehicle has indicators as a reminder to buckle the safety belts. See Safety Belt Reminders on page 5-11.
Why Safety Belts Work

When riding in a vehicle, you travel as fast as the vehicle does. If the vehicle stops suddenly, you keep going until something stops you. It could be the windshield, the instrument panel, or the safety belts!

When you wear a safety belt, you and the vehicle slow down together. There is more time to stop because you stop over a longer distance and, when worn properly, your strongest bones take the forces from the safety belts. That is why wearing safety belts makes such good sense.

Questions and Answers About Safety Belts

Q: Will I be trapped in the vehicle after a crash if I am wearing a safety belt?
A: You could be — whether you are wearing a safety belt or not. Your chance of being conscious during and after a crash, so you can unbuckle and get out, is much greater if you are belted.

Q: If my vehicle has airbags, why should I have to wear safety belts?
A: Airbags are supplemental systems only; so they work with safety belts — not instead of them. Whether or not an airbag is provided, all occupants still have to buckle up to get the most protection.

Answers and Questions About Safety Belts

Also, in nearly all states and in all Canadian provinces, the law requires wearing safety belts.

How to Wear Safety Belts Properly

This section is only for people of adult size.

There are special things to know about safety belts and children. And there are different rules for smaller children and infants. If a child will be riding in the vehicle, see Older Children on page 3-29 or Infants and Young Children on page 3-31. Follow those rules for everyone’s protection.

It is very important for all occupants to buckle up. Statistics show that unbelted people are hurt more often in crashes than those who are wearing safety belts.

There are important things to know about wearing a safety belt properly.
3-10 Seats and Restraints

- Sit up straight and always keep your feet on the floor in front of you.
- Always use the correct buckle for your seating position.
- Wear the lap part of the belt low and snug on the hips, just touching the thighs. In a crash, this applies force to the strong pelvic bones and you would be less likely to slide under the lap belt. If you slid under it, the belt would apply force on your abdomen. This could cause serious or even fatal injuries.

Warning

You can be seriously injured, or even killed, by not wearing your safety belt properly.
- Never allow the lap or shoulder belt to become loose or twisted.
- Never wear the shoulder belt under both arms or behind your back.
- Never route the lap or shoulder belt over an armrest.

Lap-Shoulder Belt

All seating positions in the vehicle have a lap-shoulder belt.
2. Pick up the latch plate and pull the belt across you. Do not let it get twisted. The lap-shoulder belt may lock if you pull the belt across you very quickly. If this happens, let the belt go back slightly to unlock it. Then pull the belt across you more slowly. If the shoulder portion of a passenger belt is pulled out all the way, the child restraint locking feature may be engaged. If this happens, let the belt go back all the way and start again.

3. Push the latch plate into the buckle until it clicks. Pull up on the latch plate to make sure it is secure. If the belt is not long enough, see Safety Belt Extender on page 3-15. Position the release button on the buckle so that the safety belt could be quickly unbuckled if necessary.

4. If equipped with a shoulder belt height adjuster, move it to the height that is right for you. See “Shoulder Belt Height Adjuster” in this section for instructions on use and important safety information.

5. To make the lap part tight, pull up on the shoulder belt. It may be necessary to pull stitching on the safety belt through the latch plate to fully tighten the lap belt on smaller occupants.
3-12 Seats and Restraints

To unlatch the belt, push the button on the buckle. The belt should return to its stowed position.

Before a door is closed, be sure the belt is out of the way. If a door is slammed against a safety belt, damage can occur to both the safety belt and the vehicle.

Shoulder Belt Height Adjuster

The vehicle has a shoulder belt height adjuster for the driver and front outboard passenger seating positions.

Adjust the height so the shoulder portion of the belt is on the shoulder and not falling off of it. The belt should be close to, but not contacting, the neck. Improper shoulder belt height adjustment could reduce the effectiveness of the safety belt in a crash. See How to Wear Safety Belts Properly on page 3-9.

Press the release button and move the height adjuster down to the desired position. The adjuster can be moved up by pushing up on the adjuster.

After the adjuster is set to the desired position, try to move it down without pressing the release button to make sure it has locked into position.

Safety Belt Pretensioners

This vehicle has safety belt pretensioners for front outboard occupants. Although the safety belt pretensioners cannot be seen, they are part of the safety belt assembly. They can help tighten the safety belts during the early stages of a moderate to severe frontal, near frontal, side, or rear crash if the threshold conditions for pretensioner activation are met. And, for vehicles with roof-rail airbags, safety belt pretensioners can help tighten the safety belts in a rollover event.

Pretensioners work only once. If the pretensioners activate in a crash, the pretensioners and probably other new parts of the vehicle’s safety belt system will need to be
replaced. See Replacing Safety Belt System Parts after a Crash on page 3-16.

Rear Safety Belt Comfort Guides

Rear safety belt comfort guides may provide added safety belt comfort for older children who have outgrown booster seats and for some adults. When installed on a shoulder belt, the comfort guide positions the shoulder belt away from the neck and head.

Safety belt comfort guides are available through your dealer.

To install the adjustable comfort guide to the seatback and the safety belt:

1. Locate the anchor loop on the rear outboard seatback, near the top.
2. Attach the adjustable comfort guide to the anchor loop by threading the hook through the loop.
3. Place the guide over the belt, and insert the two edges of the belt into the slots of the guide.
3-14 Seats and Restraints

4. Be sure that the belt is not twisted and it lies flat. The elastic cord must be under the belt and the guide on top.

5. The elastic cord on the comfort guide is adjustable. You can make it longer or shorter by squeezing both ends of the plastic adjuster and pulling on the elastic cord or the guide.

6. Adjust the guide so the shoulder portion of the belt is on the shoulder and not falling off of it. The belt should be close to, but not contacting, the neck. Improper comfort guide adjustment could reduce the effectiveness of the safety belt in a crash.

⚠️ Warning

A safety belt that is not properly worn may not provide the protection needed in a crash. The person wearing the belt could be seriously injured. The shoulder belt should go over the shoulder and across the chest. These parts of the body are best able to take belt restraining forces.

7. Buckle and position the safety belt as described previously in this section. Make sure that the shoulder belt crosses the shoulder.

To remove and store the comfort guide, squeeze the belt edges together so that the safety belt can be removed from the guide. Un-hook the guide from the loop on the seat. Store the guide in a convenient place like the glove box for the next time it is needed.
Safety Belt Use During Pregnancy

Safety belts work for everyone, including pregnant women. Like all occupants, they are more likely to be seriously injured if they do not wear safety belts.

A pregnant woman should wear a lap-shoulder belt, and the lap portion should be worn as low as possible, below the rounding, throughout the pregnancy.

The best way to protect the fetus is to protect the mother. When a safety belt is worn properly, it is more likely that the fetus will not be hurt in a crash. For pregnant women, as for anyone, the key to making safety belts effective is wearing them properly.

Safety Belt Extender

If the vehicle’s safety belt will fasten around you, you should use it.

But if a safety belt is not long enough, your dealer will order you an extender. When you go in to order it, take the heaviest coat you will wear, so the extender will be long enough for you. To help avoid personal injury, do not let someone else use it, and use it only for the seat it is made to fit. The extender has been designed for adults. Never use it for securing child seats. To wear it, attach it to the regular safety belt. See the instruction sheet that comes with the extender.

Safety System Check

Now and then, check that the safety belt reminder light, safety belts, buckles, latch plates, retractors, and anchorages are all working properly. Look for any other loose or damaged safety belt system parts that might keep a safety belt system from doing its job. See your dealer to have it repaired. Torn or frayed safety belts may not protect you in a crash. They can rip apart under impact forces. If a belt is torn or frayed, get a new one right away.

Make sure the safety belt reminder light is working. See Safety Belt Reminders on page 5-11.

Keep safety belts clean and dry. See Safety Belt Care on page 3-15.

Safety Belt Care

Keep belts clean and dry.
3-16 Seats and Restraints

⚠️ Warning
Do not bleach or dye safety belts. It may severely weaken them. In a crash, they might not be able to provide adequate protection. Clean safety belts only with mild soap and lukewarm water.

Replacing Safety Belt System Parts after a Crash

⚠️ Warning
A crash can damage the safety belt system in the vehicle. A damaged safety belt system may not properly protect the person using it, resulting in serious injury or even death in a crash. To help make sure the safety belt systems are working properly after a crash, have them inspected and any necessary replacements made as soon as possible.

After a minor crash, replacement of safety belts may not be necessary. But the safety belt assemblies that were used during any crash may have been stressed or damaged. See your dealer to have the safety belt assemblies inspected or replaced.

New parts and repairs may be necessary even if the safety belt system was not being used at the time of the crash.

Have the safety belt pretensioners, if equipped, checked if the vehicle has been in a crash, or if the airbag readiness light stays on after you start the vehicle or while you are driving. See Airbag Readiness Light on page 5-12.

Airbag System
The vehicle has the following airbags:
- A frontal airbag for the driver.
- A frontal airbag for the front outboard passenger.
- A knee airbag for the driver.
- A knee airbag for the front outboard passenger.
- A seat-mounted side impact airbag for the driver.
- A seat-mounted side impact airbag for the front outboard passenger.
- Seat-mounted side impact airbags for the second row outboard passengers.
- A roof-rail airbag for the driver and the passenger seated directly behind the driver.
• A roof-rail airbag for the front outboard passenger and the passenger seated directly behind the front outboard passenger.

All vehicle airbags have the word AIRBAG on the trim or on a label near the deployment opening.

For frontal airbags, the word AIRBAG is on the center of the steering wheel for the driver and on the instrument panel for the front outboard passenger.

For knee airbags, the word AIRBAG is on the lower part of the instrument panel.

For seat-mounted side impact airbags, the word AIRBAG is on the side of the seatback closest to the door.

For roof-rail airbags, the word AIRBAG is on the ceiling or trim.

Airbags are designed to supplement the protection provided by safety belts. Even though today’s airbags are also designed to help reduce the risk of injury from the force of an inflating bag, all airbags must inflate very quickly to do their job.

Here are the most important things to know about the airbag system:

⚠️ Warning

You can be severely injured or killed in a crash if you are not wearing your safety belt, even with airbags. Airbags are designed to work with safety belts, not replace them. Also, airbags are not designed to inflate in every crash. In some crashes safety belts are the only restraint. See When Should an Airbag Inflate? on page 3-20.

Wearing your safety belt during a crash helps reduce the chance of hitting things inside the vehicle or being ejected from it. Airbags are “supplemental restraints” to the safety belts. Everyone in the vehicle should wear a safety belt properly, whether or not there is an airbag for that person.

⚠️ Warning

Because airbags inflate with great force and faster than the blink of an eye, anyone who is up against, or very close to any airbag when it inflates can be seriously injured or killed. Do not sit unnecessarily close to any airbag, as you would be if sitting on the edge of the seat or leaning forward. Safety belts help keep you in position before and during a crash. Always wear a safety belt, even with airbags. The driver should sit as far back as possible while still maintaining control of the vehicle.
3-18 Seats and Restraints

Warning (Continued)

Occupants should not lean on or sleep against the door or side windows in seating positions with seat-mounted side impact airbags and/or roof-rail airbags.

⚠️ Warning

Children who are up against, or very close to, any airbag when it inflates can be seriously injured or killed. Always secure children properly in the vehicle. To read how, see Older Children on page 3-29 or Infants and Young Children on page 3-31.

Where Are the Airbags?

There is an airbag readiness light on the instrument cluster, which shows the airbag symbol. The system checks the airbag electrical system for malfunctions. The light tells you if there is an electrical problem. See Airbag Readiness Light on page 5-12 for more information.

The driver frontal airbag is in the center of the steering wheel.

The front outboard passenger frontal airbag is in the passenger side instrument panel.
The driver knee airbag is below the steering column. The front outboard passenger knee airbag is below the glove box.

**Driver Side Shown, Passenger Side Similar**

The seat-mounted side impact airbags for the driver and front outboard passenger are in the side of the seatbacks closest to the door. The roof-rail airbags for the driver, right front passenger, and second row outboard passengers are in the ceiling above the side windows.

**Warning**

If something is between an occupant and an airbag, the airbag might not inflate properly or it might force the object into that person causing severe injury.

(Continued)
Warning (Continued)

or even death. The path of an inflating airbag must be kept clear. Do not put anything between an occupant and an airbag, and do not attach or put anything on the steering wheel hub or on or near any other airbag covering.

Do not use seat accessories that block the inflation path of a seat-mounted side impact airbag.

Never secure anything to the roof of a vehicle with roof-rail airbags by routing a rope or tie-down through any door or window opening. If you do, the path of an inflating roof-rail airbag will be blocked.

When Should an Airbag Inflate?

This vehicle is equipped with airbags. See Airbag System on page 3-16. Airbags are designed to inflate if the impact exceeds the specific airbag system’s deployment threshold. Deployment thresholds are used to predict how severe a crash is likely to be in time for the airbags to inflate and help restrain the occupants. The vehicle has electronic sensors that help the airbag system determine the severity of the impact. Deployment thresholds can vary with specific vehicle design.

Frontal airbags are designed to inflate in moderate to severe frontal or near frontal crashes to help reduce the potential for severe injuries, mainly to the driver’s or front outboard passenger’s head and chest.

Whether the frontal airbags will or should inflate is not based primarily on how fast the vehicle is traveling.

It depends on what is hit, the direction of the impact, and how quickly the vehicle slows down.

Frontal airbags may inflate at different crash speeds depending on whether the vehicle hits an object straight on or at an angle, and whether the object is fixed or moving, rigid or deformable, narrow or wide.

Frontal airbags are not intended to inflate during vehicle rollovers, in rear impacts, or in many side impacts.

In addition, the vehicle has advanced technology frontal airbags. Advanced technology frontal airbags adjust the restraint according to crash severity.

Knee airbags are designed to inflate in moderate to severe frontal or near frontal impacts. Knee airbags are not designed to inflate during vehicle rollovers, in rear impacts, or in many side impacts.
Seat-mounted side impact airbags are designed to inflate in moderate to severe side crashes depending on the location of the impact. Seat-mounted side impact airbags are not designed to inflate in frontal impacts, near frontal impacts, rollovers, or rear impacts. A seat-mounted side impact airbag is designed to inflate on the side of the vehicle that is struck.

Roof-rail airbags are designed to inflate in moderate to severe side crashes depending on the location of the impact. In addition, these roof-rail airbags are designed to inflate during a rollover or in a severe frontal impact. Roof-rail airbags are not designed to inflate in rear impacts. Both roof-rail airbags will inflate when either side of the vehicle is struck, if the sensing system predicts that the vehicle is about to roll over on its side, or in a severe frontal impact.

In any particular crash, no one can say whether an airbag should have inflated simply because of the vehicle damage or repair costs.

What Makes an Airbag Inflate?
In a deployment event, the sensing system sends an electrical signal triggering a release of gas from the inflator. Gas from the inflator fills the airbag causing the bag to break out of the cover. The inflator, the airbag, and related hardware are all part of the airbag module.

For airbag locations, see Where Are the Airbags? on page 3-18.

How Does an Airbag Restrain?
In moderate to severe frontal or near frontal collisions, even belted occupants can contact the steering wheel or the instrument panel. In moderate to severe side collisions, even belted occupants can contact the inside of the vehicle.

Airbags supplement the protection provided by safety belts by distributing the force of the impact more evenly over the occupant’s body.

Rollover capable roof-rail airbags are designed to help contain the head and chest of occupants in the outboard seating positions in the first and second rows. The rollover capable roof-rail airbags are designed to help reduce the risk of full or partial ejection in rollover events, although no system can prevent all such ejections.

But airbags would not help in many types of collisions, primarily because the occupant’s motion is not toward those airbags. See When Should an Airbag Inflate? on page 3-20.

Airbags should never be regarded as anything more than a supplement to safety belts.
What Will You See after an Airbag Inflates?

After the frontal airbags and seat-mounted side impact airbags inflate, they quickly deflate, so quickly that some people may not even realize an airbag inflated. Roof-rail airbags may still be at least partially inflated for some time after they inflate. Some components of the airbag module may be hot for several minutes. For location of the airbags, see Where Are the Airbags? on page 3-18.

The parts of the airbag that come into contact with you may be warm, but not too hot to touch. There may be some smoke and dust coming from the vents in the deflated airbags. Airbag inflation does not prevent the driver from seeing out of the windshield or being able to steer the vehicle, nor does it prevent people from leaving the vehicle.

⚠️ Warning

When an airbag inflates, there may be dust in the air. This dust could cause breathing problems for people with a history of asthma or other breathing trouble. To avoid this, everyone in the vehicle should get out as soon as it is safe to do so. If you have breathing problems but cannot get out of the vehicle after an airbag inflates, then get fresh air by opening a window or a door. If you experience breathing problems following an airbag deployment, you should seek medical attention.

The vehicle has a feature that may automatically unlock the doors and turn on the interior lamps and hazard warning flashers after the airbags inflate. You can lock the doors, and turn off the interior lamps and hazard warning flashers by using the controls for those features.

⚠️ Warning

A crash severe enough to inflate the airbags may have also damaged important functions in the vehicle, such as the brake and steering systems, etc. Even if the vehicle appears to be drivable after a moderate crash, there may be concealed damage that could make it difficult to safely operate the vehicle.

Use caution if attempting to restart the vehicle after a crash has occurred.

In many crashes severe enough to inflate the airbag, windshields are broken by vehicle deformation. Additional windshield breakage may also occur from the front outboard passenger airbag.
Airbags are designed to inflate only once. After an airbag inflates, you will need some new parts for the airbag system. If you do not get them, the airbag system will not be there to help protect you in another crash. A new system will include airbag modules and possibly other parts. The service manual for the vehicle covers the need to replace other parts.

The vehicle has a crash sensing and diagnostic module which records information after a crash. See Vehicle Data Recording and Privacy on page 13-13 and Event Data Recorders on page 13-14.

Let only qualified technicians work on the airbag systems. Improper service can mean that an airbag system will not work properly. See your dealer for service.

### Passenger Sensing System

The vehicle has a passenger sensing system for the front outboard passenger position. The passenger airbag status indicator will light on the center display when the vehicle is started.

#### United States

The words ON or OFF, or the symbol for on or off, will be visible. See Passenger Airbag Status Indicator on page 5-13.

The passenger sensing system turns off the front outboard passenger frontal airbag and knee airbag under certain conditions. No other airbag is affected by the passenger sensing system.

The passenger sensing system works with sensors that are part of the front outboard passenger seat and safety belt. The sensors are designed to detect the presence of a properly seated occupant and determine if the front outboard passenger frontal airbag and knee airbag should be allowed to inflate or not.

According to accident statistics, children are safer when properly secured in a rear seat in the correct child restraint for their weight and size.
Whenever possible, children aged 12 and under should be secured in a rear seating position.

Never put a rear-facing child seat in the front. This is because the risk to the rear-facing child is so great, if the airbag inflates.

**Warning**

A child in a rear-facing child restraint can be seriously injured or killed if the passenger frontal airbag inflates. This is because the back of the rear-facing child restraint would be very close to the inflating airbag. A child in a forward-facing child restraint can be seriously injured or killed if the passenger frontal airbag inflates and the passenger seat is in a forward position.

Even if the passenger sensing system has turned off the front outboard passenger airbag(s), no system is fail-safe. No one can guarantee that an airbag will not inflate under some unusual circumstance, even though the airbag(s) are off.

Secure rear-facing child restraints in a rear seat, even if the airbag(s) are off. If you secure a forward-facing child restraint in the front outboard passenger seat, always move the seat as far back as it will go. It is better to secure the child restraint in a rear seat.

The passenger sensing system is designed to turn off the front outboard passenger frontal airbag and knee airbag if:

- The front outboard passenger seat is unoccupied.
- The system determines that an infant is present in a rear-facing infant seat.

- The system determines that a small child is present in a child restraint.
- The system determines that a small child is present in a booster seat.
- A front outboard passenger takes his/her weight off of the seat for a period of time.
- The front outboard passenger seat is occupied by a smaller person, such as a child who has outgrown child restraints.
- There is a critical problem with the airbag system or the passenger sensing system.

When the passenger sensing system has turned off the front outboard passenger frontal airbag and knee airbag, the off indicator will light and stay lit as a reminder that the airbags are off. See *Passenger Airbag Status Indicator* on page 5-13.
The passenger sensing system is designed to turn on the front outboard passenger frontal airbag and knee airbag anytime the system senses that a person of adult size is sitting properly in the front outboard passenger seat. When the passenger sensing system has allowed the airbags to be enabled, the on indicator will light and stay lit as a reminder that the airbags are active.

For some children who have outgrown child restraints and for very small adults, the passenger sensing system may or may not turn off the front outboard passenger frontal airbag and knee airbag, depending upon the person’s seating posture and body build. Everyone in the vehicle who has outgrown child restraints should wear a safety belt properly — whether or not there is an airbag for that person.

---

**Warning**

If the airbag readiness light ever comes on and stays on, it means that something may be wrong with the airbag system. To help avoid injury to yourself or others, have the vehicle serviced right away. See **Airbag Readiness Light on page 5-12** for more information, including important safety information.

**If the On Indicator Is Lit for a Child Restraint**

If a child restraint has been installed and the on indicator is lit:

1. Turn the vehicle off.
2. Remove the child restraint from the vehicle.
3. Remove any additional items from the seat such as blankets, cushions, seat covers, seat heaters, or seat massagers.

4. Reinstall the child restraint following the directions provided by the child restraint manufacturer and refer to **Securing Child Restraints (Front Passenger Seat) on page 3-44** or **Securing Child Restraints (Rear Seat) on page 3-47**.

5. If, after reinstalling the child restraint and restarting the vehicle, the on indicator is still lit, turn the vehicle off. Then slightly recline the vehicle seatback and adjust the seat cushion, if adjustable, to make sure that the vehicle seatback is not pushing the child restraint into the seat cushion. Also make sure the child restraint is not trapped under the vehicle head restraint. If this happens, adjust the head restraint. See **Head Restraints on page 3-2**.

6. Restart the vehicle.
3-26 Seats and Restraints

If the on indicator is still lit, secure the child in the child restraint in a rear seat position in the vehicle, and check with your dealer.

If the Off Indicator Is Lit for an Adult-Sized Occupant

If a person of adult size is sitting in the front outboard passenger seat, but the off indicator is lit, it could be because that person is not sitting properly in the seat or that the child restraint locking feature is engaged. Use the following steps to allow the system to detect that person and enable the front outboard passenger frontal airbag and knee airbag:

1. Turn the vehicle off.
2. Remove any additional material from the seat, such as blankets, cushions, seat covers, seat heaters, or seat massagers.
3. Place the seatback in the fully upright position.
4. Have the person sit upright in the seat, centered on the seat cushion, with legs comfortably extended.
5. If the shoulder portion of the belt is pulled out all the way, the child restraint locking feature will be engaged. This may unintentionally cause the passenger sensing system to turn the airbag off for some adult-sized occupants. If this happens, unbuckle the belt and let the belt go back all the way, and then buckle the belt again without pulling the belt out all the way.

6. Restart the vehicle and have the person remain in this position for two to three minutes after the on indicator is lit.

⚠️ Warning

If the front outboard passenger airbag is turned off for an adult-sized occupant, the airbag will not be able to inflate and help protect that person in a crash, resulting in an increased risk of serious injury or even death. An adult-sized occupant should not ride in the front outboard passenger seat, if the passenger airbag off indicator is lit.
Additional Factors Affecting System Operation

Safety belts help keep the passenger in position on the seat during vehicle maneuvers and braking, which helps the passenger sensing system maintain the passenger airbag status. See “Safety Belts” and “Child Restraints” in the Index for additional information about the importance of proper restraint use.

A thick layer of additional material, such as a blanket or cushion, or aftermarket equipment such as seat covers, seat heaters, and seat massagers can affect how well the passenger sensing system operates. We recommend that you not use seat covers or other aftermarket equipment except when approved by GM for your specific vehicle. See Adding Equipment to the Airbag-Equipped Vehicle on page 3-27 for more information about modifications that can affect how the system operates.

The on indicator may be lit if an object, such as a briefcase, handbag, grocery bag, laptop, or other electronic device, is put on an unoccupied seat. If this is not desired, remove the object from the seat.

For up to 10 seconds after the vehicle is turned off and the 12-volt battery is disconnected, an airbag can still inflate during improper service. You can be injured if you are close to an airbag when it inflates. Avoid yellow connectors. They are probably part of the airbag system. Be sure to follow proper service procedures, and make sure the person performing work for you is qualified to do so.

Servicing the Airbag-Equipped Vehicle

Airbags affect how the vehicle should be serviced. There are parts of the airbag system in several places around the vehicle. Your dealer and the service manual have information about servicing the vehicle and the airbag system.

Adding Equipment to the Airbag-Equipped Vehicle

Adding accessories that change the vehicle's frame, bumper system, height, front end, or side sheet metal may keep the airbag system
3-28 Seats and Restraints

from working properly. The operation of the airbag system can also be affected by changing any parts of the front seats, safety belts, the airbag sensing and diagnostic module, steering wheel, instrument panel, any of the airbag modules, ceiling or pillar garnish trim, front sensors, side impact sensors, or airbag wiring.

Your dealer and the service manual have information about the location of the airbag sensors, sensing and diagnostic module, and airbag wiring.

In addition, the vehicle has a passenger sensing system for the front outboard passenger position, which includes sensors that are part of the passenger seat. The passenger sensing system may not operate properly if the original seat trim is replaced with non-GM covers, upholstery, or trim; or with GM covers, upholstery, or trim designed for a different vehicle. Any object, such as an aftermarket seat heater or a comfort-enhancing pad or device, installed under or on top of the seat fabric, could also interfere with the operation of the passenger sensing system. This could either prevent proper deployment of the passenger airbag(s) or prevent the passenger sensing system from properly turning off the passenger airbag(s). See Passenger Sensing System on page 3-23.

The vehicle has rollover roof-rail airbags. See Different Size Tires and Wheels on page 10-42 for additional important information.

If you have to modify your vehicle because you have a disability and have questions about whether the modifications will affect the vehicle's airbag system, or if you have questions about whether the airbag system will be affected if the vehicle is modified for any other reason, call Customer Assistance. See Customer Assistance Offices on page 13-3.

Airbag System Check

The airbag system does not need regularly scheduled maintenance or replacement. Make sure the airbag readiness light is working. See Airbag Readiness Light on page 5-12.

![Caution]

If an airbag covering is damaged, opened, or broken, the airbag may not work properly. Do not open or break the airbag coverings. If there are any opened or broken airbag coverings, have the airbag covering and/or airbag module replaced. For the location of the airbags, see Where Are the Airbags? on page 3-18. See your dealer for service.
Replacing Airbag System Parts after a Crash

⚠️ Warning

A crash can damage the airbag systems in the vehicle. A damaged airbag system may not work properly and may not protect you and your passenger(s) in a crash, resulting in serious injury or even death. To help make sure the airbag systems are working properly after a crash, have them inspected and any necessary replacements made as soon as possible.

If an airbag inflates, you will need to replace airbag system parts. See your dealer for service.

If the airbag readiness light stays on after the vehicle is started or comes on when you are driving, the airbag system may not work properly. Have the vehicle serviced right away. See Airbag Readiness Light on page 5-12.

Child Restraints

Older Children

Older children who have outgrown booster seats should wear the vehicle safety belts.
3-30 Seats and Restraints

The manufacturer instructions that come with the booster seat state the weight and height limitations for that booster. Use a booster seat with a lap-shoulder belt until the child passes the fit test below:

- Sit all the way back on the seat. Do the knees bend at the seat edge? If yes, continue. If no, return to the booster seat.
- Buckle the lap-shoulder belt. Does the shoulder belt rest on the shoulder? If yes, continue. If no, try using the rear safety belt comfort guide. See “Rear Safety Belt Comfort Guides” under Lap-Shoulder Belt on page 3-10. If the shoulder belt still does not rest on the shoulder, then return to the booster seat.
- Does the lap belt fit low and snug on the hips, touching the thighs? If yes, continue. If no, return to the booster seat.

- Can proper safety belt fit be maintained for the length of the trip? If yes, continue. If no, return to the booster seat.

Q: What is the proper way to wear safety belts?

A: An older child should wear a lap-shoulder belt and get the additional restraint a shoulder belt can provide. The shoulder belt should not cross the face or neck. The lap belt should fit snugly below the hips, just touching the top of the thighs. This applies belt force to the child’s pelvic bones in a crash. It should never be worn over the abdomen, which could cause severe or even fatal internal injuries in a crash.

According to accident statistics, children are safer when properly restrained in a rear seating position.

In a crash, children who are not buckled up can strike other people who are buckled up, or can be thrown out of the vehicle. Older children need to use safety belts properly.

⚠️ Warning

Never allow more than one child to wear the same safety belt. The safety belt cannot properly spread the impact forces. In a crash, they can be crushed together and seriously injured. A safety belt must be used by only one person at a time.
Seats and Restraints 3-31

Warning

Never allow a child to wear the safety belt with the shoulder belt behind their back. A child can be seriously injured by not wearing the lap-shoulder belt properly. In a crash, the child would not be restrained by the shoulder belt. The child could move too far forward increasing the chance of head and neck injury. The child might also slide under the lap belt. The belt force would then be applied right on the abdomen. That could cause serious or fatal injuries. The shoulder belt should go over the shoulder and across the chest.

Warning (Continued)

Infants and Young Children

Everyone in a vehicle needs protection! This includes infants and all other children. Neither the distance traveled nor the age and size of the traveler changes the need, for everyone, to use safety restraints. In fact, the law in every state in the United States and in every Canadian province says children up to some age must be restrained while in a vehicle.

Warning

Children can be seriously injured or strangled if a shoulder belt is wrapped around their neck and the safety belt continues to tighten. Never leave children unattended in a vehicle and never allow children to play with the safety belts.
3-32 Seats and Restraints

Every time infants and young children ride in vehicles, they should have the protection provided by appropriate child restraints. Neither the vehicle's safety belt system nor its airbag system is designed for them.

Children who are not restrained properly can strike other people, or can be thrown out of the vehicle.

⚠️ Warning
Never hold an infant or a child while riding in a vehicle. Due to crash forces, an infant or a child will become so heavy it is not possible to hold it during a crash. For example, in a crash at only 40 km/h (25 mph), a 5.5 kg (12 lb) infant will suddenly become a 110 kg (240 lb) force on a person's arms. An infant should be secured in an appropriate restraint.

⚠️ Warning
Children who are up against, or very close to, any airbag when it inflates can be seriously injured or killed. Never put a rear-facing child restraint in the right front seat. Secure a rear-facing child restraint in a rear seat. It is also better to secure a forward-facing child restraint in a rear seat. If you must secure a forward-facing child restraint in the right front seat, always move the front passenger seat as far back as it will go.

Q: What are the different types of add-on child restraints?
A: Add-on child restraints, which are purchased by the vehicle owner, are available in four basic types. Selection of a particular restraint should take into consideration not only the child's...
weight, height, and age but also whether or not the restraint will be compatible with the motor vehicle in which it will be used. For most basic types of child restraints, there are many different models available. When purchasing a child restraint, be sure it is designed to be used in a motor vehicle. If it is, the restraint will have a label saying that it meets federal motor vehicle safety standards. The restraint manufacturer instructions that come with the restraint state the weight and height limitations for a particular child restraint. In addition, there are many kinds of restraints available for children with special needs.

**Warning**

To reduce the risk of neck and head injury during a crash, infants need complete support. In a crash, if an infant is in a rear-facing child restraint, the crash forces can be distributed across the strongest part of an infant's body, the back and shoulders. Infants should always be secured in rear-facing child restraints.

**Warning**

A young child's hip bones are still so small that the vehicle's regular safety belt may not remain low on the hip bones, as it should. Instead, it may settle up around the child's abdomen. In a crash, the belt would apply force on a body area that is unprotected by any bony structure. This alone could cause serious or fatal injuries. To reduce the risk of serious or fatal injuries during a crash, young children should always be secured in appropriate child restraints.
3-34 Seats and Restraints

Child Restraint Systems

Rear-Facing Infant Seat
A rear-facing infant seat provides restraint with the seating surface against the back of the infant. The harness system holds the infant in place and, in a crash, acts to keep the infant positioned in the restraint.

Forward-Facing Child Seat
A forward-facing child seat provides restraint for the child's body with the harness.

Booster Seats
A booster seat is a child restraint designed to improve the fit of the vehicle's safety belt system. A booster seat can also help a child to see out the window.
Securing an Add-On Child Restraint in the Vehicle

⚠️ Warning

A child can be seriously injured or killed in a crash if the child restraint is not properly secured in the vehicle. Secure the child restraint properly in the vehicle using the vehicle safety belt or LATCH system, following the instructions that came with that child restraint and the instructions in this manual.

To help reduce the chance of injury, the child restraint must be secured in the vehicle. Child restraint systems must be secured in vehicle seats by lap belts or the lap belt portion of a lap-shoulder belt, or by the LATCH system. See Lower Anchors and Tethers for Children (LATCH System) on page 3-37.

Children can be endangered in a crash if the child restraint is not properly secured in the vehicle.

When securing an add-on child restraint, refer to the instructions that came with the restraint which may be on the restraint itself or in a booklet, or both, and to this manual. The child restraint instructions are important, so if they are not available, obtain a replacement copy from the manufacturer.

Keep in mind that an unsecured child restraint can move around in a collision or sudden stop and injure people in the vehicle. Be sure to properly secure any child restraint in the vehicle — even when no child is in it.

In some areas of the United States and Canada, Certified Child Passenger Safety Technicians (CPSTs) are available to inspect and demonstrate how to correctly use and install child restraints. In the U.S., refer to the National Highway Traffic Safety Administration (NHTSA) website to locate the nearest child safety seat inspection station. For CPST availability in Canada, check with Transport Canada or the Provincial Ministry of Transportation office.

Securing the Child Within the Child Restraint

⚠️ Warning

A child can be seriously injured or killed in a crash if the child is not properly secured in the child restraint. Secure the child properly following the instructions that came with that child restraint.

Where to Put the Restraint

According to accident statistics, children and infants are safer when properly restrained in a child restraint system or infant restraint system secured in a rear seating position.
3-36 Seats and Restraints

Whenever possible, children aged 12 and under should be secured in a rear seating position.

Never put a rear-facing child seat in the front. This is because the risk to the rear-facing child is so great if the airbag deploys.

⚠️ Warning

A child in a rear-facing child restraint can be seriously injured or killed if the front passenger airbag inflates. This is because the back of the rear-facing child restraint would be very close to the inflating airbag. A child in a forward-facing child restraint can be seriously injured or killed if the front passenger airbag inflates and the passenger seat is in a forward position.

Even if the passenger sensing system has turned off the front passenger frontal airbag, no system is fail-safe. No one can guarantee that an airbag will not deploy under some unusual circumstance, even though it is turned off.

Secure rear-facing child restraints in a rear seat, even if the airbag is off. If you secure a forward-facing child restraint in the front seat, always move the front passenger seat as far back as it will go. It is better to secure the child restraint in a rear seat.

See Passenger Sensing System on page 3-23 for additional information.

When securing a child restraint in a rear seating position, study the instructions that came with the child restraint to make sure it is compatible with this vehicle.

Child restraints and booster seats vary considerably in size, and some may fit in certain seating positions better than others. Always make sure the child restraint is properly secured.

Depending on where you place the child restraint and the size of the child restraint, you may not be able to access adjacent safety belt assemblies or LATCH anchors for additional passengers or child restraints. Adjacent seating positions should not be used if the child restraint prevents access to or interferes with the routing of the safety belt.

Wherever a child restraint is installed, be sure to secure the child restraint properly.

Keep in mind that an unsecured child restraint can move around in a collision or sudden stop and injure people in the vehicle. Be sure to properly secure any child restraint in the vehicle — even when no child is in it.
Lower Anchors and Tethers for Children (LATCH System)

The LATCH system secures a child restraint during driving or in a crash. LATCH attachments on the child restraint are used to attach the child restraint to the anchors in the vehicle. The LATCH system is designed to make installation of a child restraint easier.

In order to use the LATCH system in your vehicle, you need a child restraint that has LATCH attachments. LATCH-compatible rear-facing and forward-facing child seats can be properly installed using either the LATCH anchors or the vehicle’s safety belts. Do not use both the safety belts and the LATCH anchorage system to secure a rear-facing or forward-facing child seat.

Booster seats use the vehicle’s safety belts to secure the child in the booster seat. If the manufacturer recommends that the booster seat be secured with the LATCH system, this can be done as long as the booster seat can be positioned properly and there is no interference with the proper positioning of the lap-shoulder belt on the child.

Make sure to follow the instructions that came with the child restraint, and also the instructions in this manual.

When installing a child restraint with a top tether, you must also use either the lower anchors or the safety belts to properly secure the child restraint. A child restraint must never be installed using only the top tether and anchor.

The LATCH anchorage system can be used until the combined weight of the child plus the child restraint is 29.5 kg (65 lbs). Use the safety belt alone instead of the LATCH anchorage system once the combined weight is more than 29.5 kg (65 lbs).

Lower Anchors

Lower anchors (1) are metal bars built into the vehicle. There are two lower anchors for each LATCH seating position that will accommodate a child restraint with lower attachments (2).
3-38 Seats and Restraints

**Top Tether Anchor**

A top tether (3, 4) anchors the top of the child restraint to the vehicle. A top tether anchor is built into the vehicle. The top tether attachment (2) on the child restraint connects to the top tether anchor in the vehicle in order to reduce the forward movement and rotation of the child restraint during driving or in a crash.

The child restraint may have a single tether (3) or a dual tether (4). Either will have a single attachment (2) to secure the top tether to the anchor.

Some child restraints that have a top tether are designed for use with or without the top tether being attached. Others require the top tether always to be attached. In Canada, the law requires that forward-facing child restraints have a top tether, and that the tether be attached. Be sure to read and follow the instructions for your child restraint.

**Lower Anchor and Top Tether Anchor Locations**

- **Top Tether Anchor**: Seating positions with top tether anchors.
- **Lower Anchor**: Seating positions with two lower anchors.
To assist in locating the lower anchors, each seating position with lower anchors has two labels, near the crease between the seatback and the seat cushion.

To assist in locating the top tether anchors, the top tether anchor symbol is on the trim near the anchor.

The top tether anchors are on the rear wall of the cargo area. Be sure to use an anchor on the same side of the vehicle as the seating position where the child restraint will be placed.

Do not secure a child restraint in a position without a top tether anchor if a national or local law requires that the top tether be attached, or if the instructions that come with the child restraint say that the top tether must be attached.

According to accident statistics, children and infants are safer when properly restrained in a child restraint system or infant restraint system secured in a rear seating position. See Where to Put the Restraint on page 3-35 for additional information.

Securing a Child Restraint Designed for the LATCH System

⚠️ Warning

If a LATCH-type child restraint is not attached to anchors, the child restraint will not be able to protect the child correctly. In a crash, the child could be seriously injured or killed. Install a LATCH-type child restraint properly using the anchors, or use the vehicle safety belts to secure the restraint, following the instructions that came with the child restraint and the instructions in this manual.
3-40 Seats and Restraints

**Warning**

Do not attach more than one child restraint to a single anchor. Attaching more than one child restraint to a single anchor could cause the anchor or attachment to come loose or even break during a crash. A child or others could be injured. To reduce the risk of serious or fatal injuries during a crash, attach only one child restraint per anchor.

**Warning (Continued)**

of the retractor to set the lock, if the vehicle has one, after the child restraint has been installed.

**Caution**

Do not let the LATCH attachments rub against the vehicle's safety belts. This may damage these parts. If necessary, move buckled safety belts to avoid rubbing the LATCH attachments.

Do not fold the empty rear seat with a safety belt buckled. This could damage the safety belt or the seat. Unbuckle and return the safety belt to its stowed position, before folding the seat.

If you need to secure more than one child restraint in the rear seat, see *Where to Put the Restraint on page 3-35.*

This system is designed to make installation of child restraints easier. When using lower anchors, do not use the vehicle's safety belts. Instead use the vehicle's anchors and child restraint attachments to secure the restraints. Some restraints also use another vehicle anchor to secure a top tether.

1. Attach and tighten the lower attachments to the lower anchors. If the child restraint does not have lower attachments or the desired seating position does not have lower anchors, secure the child restraint with the top tether and the safety belts. Refer to your child restraint manufacturer instructions and the instructions in this manual.
Seats and Restraints 3-41

1.1. Find the lower anchors for the desired seating position.

1.2. Put the child restraint on the seat.

For rear outboard seating positions, if the head restraint interferes with the proper installation of the child restraint, the head restraint may be removed. See “Head Restraint Removal and Reinstallation” at the end of this section.

When installing a rear-facing child restraint, it may be necessary to move the front seat forward to properly install the child restraint per the child restraint manufacturer instructions. See Seat Adjustment on page 3-3.

1.3. Attach and tighten the lower attachments on the child restraint to the lower anchors.

2. If the child restraint manufacturer recommends that the top tether be attached, attach and tighten the top tether to the top tether anchor, if equipped. Refer to the child restraint instructions and the following steps:

2.1. Find the top tether anchor.

2.2. Remove the cargo cover before installing the top tether. Place the cargo cover on the floor of the cargo area. The cargo cover should remain off while the top tether is in use.

2.3. Route, attach, and tighten the top tether according to your child restraint instructions and the following instructions:

If you are using a single tether in an outboard seating position and the head restraint has been removed, route the tether over the seatback.
3-42 Seats and Restraints

If the rear outboard seating position you are using has an adjustable head restraint and you are using a single tether, raise the head restraint and route the tether under the head restraint and in between the head restraint posts.

If you are using a dual tether in an outboard seating position and the head restraint has been removed, route the tether over the seatback and over the inboard edge of the rear speaker.

3. Before placing a child in the child restraint, make sure it is securely held in place. To check, grasp the child restraint at the LATCH path and attempt to move it side to side and back and forth. There should be no more than 2.5 cm (1 in) of movement for proper installation.

Head Restraint Removal and Reinstallation

The rear outboard head restraints can be removed if they interfere with the proper installation of the child restraint.

To remove the head restraint:

1. Partially fold the seatback forward. See Rear Seats on page 3-6 for additional information.
2. Press both buttons on the head restraint posts at the same time, and pull up on the head restraint.

3. Store the head restraint in the cargo area of the vehicle inside the cargo net.

4. When the child restraint is removed, reinstall the head restraint before the seating position is used.

## Warning

With head restraints that are not installed and adjusted properly, there is a greater chance that occupants will suffer a neck/spinal injury in a crash. Do not drive until the head restraints for all occupants are installed and adjusted properly.

To reinstall the head restraint:

1. Insert the head restraint posts into the holes in the top of the seatback. The notches on the posts must face the driver side of the vehicle.

2. Push the head restraint down. If necessary, press the height adjustment release button to further lower the head restraint. See Head Restraints on page 3-2.

3. Try to move the head restraint to make sure that it is locked in place.

### Replacing LATCH System Parts After a Crash

### Warning

A crash can damage the LATCH system in the vehicle. A damaged LATCH system may not properly secure the child restraint, resulting in serious injury or even (Continued)
3-44 Seats and Restraints

Warning (Continued)

death in a crash. To help make sure the LATCH system is working properly after a crash, see your dealer to have the system inspected and any necessary replacements made as soon as possible.

If the vehicle has the LATCH system and it was being used during a crash, new LATCH system parts may be needed.

New parts and repairs may be necessary even if the LATCH system was not being used at the time of the crash.

Securing Child Restraints (Front Passenger Seat)

This vehicle has airbags. A rear seat is a safer place to secure a forward-facing child restraint. See Where to Put the Restraint on page 3-35.

In addition, the vehicle has a passenger sensing system which is designed to turn off the front outboard passenger frontal airbag and knee airbag under certain conditions. See Passenger Sensing System on page 3-23 and Passenger Airbag Status Indicator on page 5-13 for more information on this, including important safety information.

Never put a rear-facing child seat in the front. This is because the risk to the rear-facing child is so great, if the airbag deploys.

Warning

A child in a rear-facing child restraint can be seriously injured or killed if the passenger frontal airbag inflates or if the passenger seat is in a forward position.

Even if the passenger sensing system has turned off the front outboard passenger airbag(s), no system is fail-safe. No one can guarantee that an airbag will not inflate under some unusual circumstance, even though the airbag(s) are off.

Secure rear-facing child restraints in a rear seat, even if the airbag(s) are off. If you secure a forward-facing child restraint in the front outboard passenger seat, always move the seat as far back as it will go. It is better to secure the child restraint in a rear seat.
If the child restraint has the LATCH system, see "Lower Anchors and Tethers for Children (LATCH System) on page 3-37" for how to install your child restraint using LATCH. If a child restraint is secured using a safety belt and it uses a top tether, see "Lower Anchors and Tethers for Children (LATCH System) on page 3-37" for top tether anchor locations.

Do not secure a child seat in a position without a top tether anchor if a national or local law requires that the top tether be anchored, or if the instructions that come with the child restraint say that the top strap must be anchored.

In Canada, the law requires that forward-facing child restraints have a top tether, and that the tether be attached.

You will be using the lap-shoulder belt to secure the child restraint in this position. Follow the instructions that came with the child restraint.

1. Move the seat as far back as it will go before securing the forward-facing child restraint.

When the passenger sensing system has turned off the front outboard passenger frontal airbag and knee airbag, the off indicator on the passenger airbag status indicator should light and stay lit when you start the vehicle. See "Passenger Airbag Status Indicator on page 5-13."

2. Put the child restraint on the seat.

3. Pick up the latch plate, and run the lap and shoulder portions of the vehicle's safety belt through or around the restraint. The child restraint instructions will show you how.

Tilt the latch plate to adjust the belt if needed.
3-46 Seats and Restraints

4. Push the latch plate into the buckle until it clicks.
   Position the release button on the buckle so that the safety belt could be quickly unbuckled if necessary.

5. Pull the shoulder belt all the way out of the retractor to set the lock. When the retractor lock is set, the belt can be tightened but not pulled out of the retractor.

6. To tighten the belt, push down on the child restraint, pull the shoulder portion of the belt to tighten the lap portion of the belt, and feed the shoulder belt back into the retractor. When installing a forward-facing child restraint, it may be helpful to use your knee to push down on the child restraint as you tighten the belt. Try to pull the belt out of the retractor to make sure the retractor is locked. If the retractor is not locked, repeat Steps 5 and 6.

7. Before placing a child in the child restraint, make sure it is securely held in place. To check, grasp the child restraint at the safety belt path and attempt to move it side to side and back and forth. When the child restraint is properly installed, there should be no more than 2.5 cm (1 in) of movement.
   If the airbags are off, the off indicator in the passenger airbag status indicator will come on and stay on when the vehicle is started.
   If a child restraint has been installed and the off symbol is not lit, see “If the On Indicator Is Lit for a Child Restraint” under Passenger Sensing System on page 3-23.
   To remove the child restraint, unbuckle the vehicle's safety belt and let it go back all the way.
Securing Child Restraints (Rear Seat)

When securing a child restraint in a rear seating position, study the instructions that came with the child restraint to make sure it is compatible with this vehicle.

If the child restraint has the LATCH system, see Lower Anchors and Tethers for Children (LATCH System) on page 3-37 for how and where to install the child restraint using LATCH. If a child restraint is secured in the vehicle using a safety belt and it uses a top tether, see Lower Anchors and Tethers for Children (LATCH System) on page 3-37 for top tether anchor locations.

Do not secure a child seat in a position without a top tether anchor if a national or local law requires that the top tether be anchored, or if the instructions that come with the child restraint say that the top strap must be anchored.

In Canada, the law requires that forward-facing child restraints have a top tether, and that the tether be attached.

If the child restraint does not have the LATCH system, you will be using the safety belt to secure the child restraint in this position. Be sure to follow the instructions that came with the child restraint. Secure the child in the child restraint when and as the instructions say.

If more than one child restraint needs to be installed in the rear seat, be sure to read Where to Put the Restraint on page 3-35.

1. Put the child restraint on the seat.

If the head restraint interferes with the proper installation of the child restraint, the head restraint may be removed. See “Head Restraint Removal and Reinstallation” under Lower Anchors and Tethers for Children (LATCH System) on page 3-37.

When installing a rear-facing child restraint, it may be necessary to move the front seat forward to properly install the child restraint per the child restraint manufacturer instructions. See Seat Adjustment on page 3-3.

2. Pick up the latch plate, and run the lap and shoulder portions of the vehicle safety belt through or around the restraint. The child restraint instructions will show you how.
3. Push the latch plate into the buckle until it clicks. Position the release button on the buckle so that the safety belt could be quickly unbuckled if necessary.

4. Pull the shoulder belt all the way out of the retractor to set the lock. When the retractor lock is set, the belt can be tightened but not pulled out of the retractor.

5. To tighten the belt, push down on the child restraint, pull the shoulder portion of the belt to tighten the lap portion of the belt, and feed the shoulder belt back into the retractor. When installing a forward-facing child restraint, it may be helpful to use your knee to push down on the child restraint as you tighten the belt. Try to pull the belt out of the retractor to make sure the retractor is locked. If the retractor is not locked, repeat Steps 4 and 5.
6. If the child restraint has a top tether, follow the child restraint manufacturer's instructions regarding the use of the top tether. See *Lower Anchors and Tethers for Children (LATCH System)* on page 3-37 for more information.

7. Before placing a child in the child restraint, make sure it is securely held in place. To check, grasp the child restraint at the safety belt path and attempt to move it side to side and back and forth. When the child restraint is properly installed, there should be no more than 2.5 cm (1 in) of movement.

To remove the child restraint, unbuckle the vehicle safety belt and let it return to the stowed position. If the top tether is attached to a top tether anchor, disconnect it. If the head restraint was removed, reinstall it before the seating position is used. See "Head Restraint Removal and Reinstallation" under *Lower Anchors and Tethers for Children (LATCH System)* on page 3-37.
Storage

Storage Compartments
Storage Compartments ........ 4-1
Glove Box ..................... 4-1

Additional Storage Features
Cargo Cover ..................... 4-1
Shopping Bag Hooks ............ 4-2
Cargo Net ......................... 4-2

Storage Compartments

⚠️ Warning
Do not store heavy or sharp objects in storage compartments. In a crash, these objects may cause the cover to open and could result in injury.

Glove Box
Lift up on the glove box lever to open it.

Additional Storage Features

Cargo Cover

⚠️ Warning
An unsecured cargo cover could strike people in a sudden stop or turn, or in a crash. Store the cargo cover securely or remove it from the vehicle.

The cargo cover can be used to cover items in the rear of the vehicle.
4-2 Storage

To remove the cargo cover:
1. Remove both of the cords (1) from the hooks at the top of the liftgate.
2. Pull the cargo cover (2) rearward to release the cargo cover.

To install the cargo cover:
1. Align the cargo cover (3) on the trim panel edge (2) on both sides and push it forward, locking the cargo cover into the hooks (1).
2. Reconnect both of the cords to the hooks at the top of the liftgate.

Shopping Bag Hooks

The vehicle has a shopping bag hook under the front seat head restraints. Lift the head restraints to access the hook.

Cargo Net

The cargo net is in the trunk and used to store small loads. The net should not be used to store heavy loads.

Controls

Steering Wheel Adjustment

To adjust the steering wheel:
1. Pull the lever down.
2. Move the steering wheel up or down.
3. Pull the lever up to lock the steering wheel in place.

Do not adjust the steering wheel while driving.

Steering Wheel Controls

If equipped with audio steering wheel controls, some audio controls can be adjusted at the steering wheel.

 SEEK or SEEK (Next/Previous): Press to go to the next or previous radio station, song on an iPod®, or file on a USB device (if equipped).

(Push to Talk): If equipped with Bluetooth or OnStar, press to interact with those systems. See Bluetooth (Overview) on page 7-14
or Bluetooth (Infotainment Controls) on page 7-16 or OnStar Overview on page 14-1.

(Mute/End Call): Press to silence the vehicle speakers only. Press again to turn the sound on. If equipped with OnStar or Bluetooth systems, press to decline an incoming call, to end speech recognition, or to end a current call.

(Volume): Press + or − to increase or decrease the volume.

Horn
Press 📫 on the steering wheel pad to sound the horn.

The pedestrian safety signal provides a momentary soft-note horn sound. See Pedestrian Safety Signal on page 5-3.

Pedestrian Safety Signal
Your vehicle is equipped with an automatic sound generation and a manual alert.

The automatic sound is generated to indicate the vehicle presence to pedestrians. The sound changes if the vehicle is speeding up or slowing down. It is activated when the vehicle is shifted into a forward gear or R (Reverse), up to 30 km/h (19 mph).

An alert can also be sounded manually while driving, such as in parking lots. Use this feature to alert people who may not hear your vehicle approaching.

To manually sound the pedestrian safety signal:

1. Pull the turn signal lever all the way toward you momentarily. See Exterior Lamp Controls on page 6-1 and Headlamp High/Low-Beam Changer on page 6-1. The high-beam headlamps and indicator light will turn on, and a soft-note alert will momentarily sound. When the turn signal lever is released, the high-beam headlamps and indicator light will turn off.

2. Repeat for additional activations of the pedestrian safety signal.

Windshield Wiper/Washer

The windshield wiper/washer lever is on the right side of the steering column.

Move the lever to one of the following positions:

HI: Use for fast wipes.
LO: Use for slow wipes.
5-4 Instruments and Controls

INT (Intermittent Wipes): Move the lever up to INT for intermittent wipes, then turn the INT band up for more frequent wipes or down for less frequent wipes.

OFF: Use to turn the wipers off.

💡 (Mist): For a single wipe, briefly move the wiper lever down. For several wipes, hold the wiper lever down.

Clear snow and ice from the wiper blades before using them. If frozen to the windshield, carefully loosen or thaw them. Replace damaged wiper blades. See Wiper Blade Replacement on page 10-14.

Heavy snow or ice can overload the wiper motor. A circuit breaker will stop the motor until it cools down.

Wiper Parking
If the ignition is turned to LOCK/OFF while the wipers are on LO, HI, or INT, they will immediately stop.

If the windshield wiper lever is then moved to off before the driver door is opened or within 10 minutes, the wipers will restart and move to the base of the windshield.

If the ignition is turned to LOCK/OFF while the wipers are performing wipes due to windshield washing, the wipers continue to run until they reach the base of the windshield.

Windshield Washer
Pull the windshield wiper lever toward you to spray windshield washer fluid and activate the wipers.

The wipers will continue until the lever is released or the maximum wash time is reached.

When the windshield wiper lever is released, additional wipes may occur depending on how long the windshield washer had been activated. See Washer Fluid on page 10-9 for information on filling the windshield washer fluid reservoir.

⚠️ Warning
In freezing weather, do not use the washer until the windshield is warmed. Otherwise the washer fluid can form ice on the windshield, blocking your vision.

Rear Window Wiper/Washer
If equipped with the rear wiper/washer, the controls are on the end of the windshield wiper lever.

Turn the rear wiper/washer band to operate the rear window wiper/washer.

ON: Turns the rear wiper on for continuous wipes.
OFF: Turns the rear wiper off.

(Rear Washer): Turn the band up or down towards ( to spray washer fluid on the rear window. The control returns to its starting position when released.

The rear window wiper will stop when the electric drive unit is in N (Neutral) or the liftgate is open. It also stops for 10 seconds when the electric drive unit is shifted from N (Neutral) to other gears.

Reverse Gear Wipes
If the rear wiper control is off, the rear wiper will automatically operate continuously when the electric drive unit is in R (Reverse), and the front windshield wiper is performing low or high speed wipes. If the rear wiper control is off, the electric drive unit is in R (Reverse), and the front windshield wiper is performing interval wipes, then the rear wiper automatically performs interval wipes.

This feature can be changed. See Vehicle Personalization on page 5-37.

The windshield washer reservoir is used for the windshield and the rear window. Check the fluid level in the reservoir if either washer is not working. See Washer Fluid on page 10-9.

Clock
The infotainment system controls are used to access the time and date settings through the menu system. See Operation on page 7-4 for information about how to use the menu system.

Setting the 12/24 Hour Format
1. Press ⏰, and then press settings.
2. Press time and date settings, and then set time format.

Setting the Month and Day Format
1. Press ⏰, and then press settings.
2. Press time and date settings, and then set date format.
3. Set the date display to DD/MM/YYYY (day/month/year), MM/DD/YYYY (month/day/year), or YYYY/MM/DD (year/month/day) display format.

Power Outlets
The accessory power outlets can be used to plug in electrical equipment, such as a cell phone or MP3 player. The accessory power outlets only work with the ignition turned on.
5-6 Instruments and Controls

The vehicle may have accessory power outlets:
- On the center stack below the climate control.
- On the rear of the center console.
Open the cover to access and replace when not in use.

When adding electrical equipment, be sure to follow the proper installation instructions included with the equipment. See Add-On Electrical Equipment on page 9-42.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Leaving electrical equipment plugged in for an extended period of time while the vehicle is off will drain the battery. Always unplug electrical equipment when not in use and do not plug in equipment that exceeds the maximum 20 amp rating.</td>
</tr>
</tbody>
</table>

Warning Lights, Gauges, and Indicators

Warning lights and gauges can signal that something is wrong before it becomes serious enough to cause an expensive repair or replacement. Paying attention to the warning lights and gauges could prevent injury.

Warning lights come on when there could be a problem with a vehicle function. Some warning lights come on briefly when the propulsion system is started to indicate they are working.

Gauges can indicate when there could be a problem with a vehicle function. Often gauges and warning lights work together to indicate a problem with the vehicle.

When one of the warning lights comes on and stays on while driving, or when one of the gauges shows there may be a problem,
check the section that explains what to do. Waiting to do repairs can be costly and even dangerous.

**Instrument Cluster**

The instrument cluster displays a preview of information that includes electric range, charging, odometer, and battery status. This happens upon entry when the driver door is opened, before starting the vehicle.

A CHARGING OVERRIDE/INTERRUPTION OCCURRED message may display on the lower right of the screen to indicate that a charging override or interruption has occurred due to one or more of the following events:

- Override of the charge settings by the owner using OnStar.
- Unintended interruption of AC power at the vehicle’s charge port.
- Interruption of charging by the utility company using OnStar as authorized by the vehicle owner.

The following screens may appear, depending on the status.

This screen indicates that the charge cord is not connected. Plug the charge cord in to charge the vehicle.

This screen indicates that the charge cord is connected and charging is complete.

This screen indicates that charging is active and the estimated charge completion time is 7:00 a.m.
This screen indicates that charging is programmed to be delayed with an estimated charge completion time of 7:00 a.m.

This screen indicates that fast charging is active and is finalizing the charge past 80%. This process may take several minutes to complete.

This screen indicates that fast charging is active with an estimated 80% charge completion time of 3:00 p.m.

This screen indicates that priority charging is active with an estimated total charge completion time of 7:00 a.m.

This screen indicates that the fast charge process is initializing. This process may take several seconds to complete.

This screen indicates that the charge cord is connected, but the vehicle cannot be charged. See “DC Charging” under Plug-In Charging on page 9-32.
English Cluster with Enhanced Battery Gauge and Driver Efficiency Gauge Shown, Others and Metric Similar
5-10 Instruments and Controls

Instrument Cluster Display Configurations

There are four instrument cluster display configurations to choose from:

- Enhanced Battery Gauge with Driver Efficiency Gauge
- Enhanced Battery Gauge with Power Indicator Gauge
- Simple Battery Gauge with Driver Efficiency Gauge
- Simple Battery Gauge with Power Indicator Gauge

Press CONFIG to the left of the steering wheel to change the display configuration.

Speedometer

The speedometer shows the vehicle’s speed in either kilometers per hour (km/h) or miles per hour (mph).

Odometer

The odometer shows how far the vehicle has been driven, in either kilometers or miles.

Trip Odometer

The trip odometer is within the Driver Information Center. See Driver Information Center (DIC) on page 5-29 for more information.

Compass

The vehicle has a compass display in the instrument cluster above the speedometer. The compass receives its heading and other information from the Global Positioning System (GPS) antenna and vehicle speed information.

The compass system has automatic calibration and zone adjustment features.

Avoid covering the GPS antenna for long periods of time with objects that may interfere with the antenna’s ability to receive a satellite signal.

The compass system is designed to operate for a certain number of miles or degrees of turn before needing a signal from the GPS satellites. The compass system will automatically determine when a GPS signal is restored and provide a heading.

Battery Gauge (High Voltage)

This indicator displays the high voltage battery charge level.
The number in the ball next to the indicator displays a current estimate of how far the vehicle can be driven. Use this range estimation for planning your trip. MAX is the current maximum range, and MIN is the current minimum possible range based on recent driving habits. Changing your driving habits can increase or decrease the range. Use this gauge to see the effects of recent driving on your energy usage.

**Driver Efficiency Gauge**

This gauge is a guide to driving in an efficient manner by keeping the ball green and in the center of the gauge. The leaves stop spinning when the vehicle stops or when the ball travels away from the center of the gauge. Changing your driving habits can increase or decrease the range. Use this gauge to see the effects of recent driving on your energy usage.

**Power Indicator Gauge**

The power gauge shows the vehicle’s instantaneous power consumption. It also shows the regenerative power going back into the battery.

**Safety Belt Reminders**

**Driver Safety Belt Reminder Light**

There is a driver safety belt reminder light on the instrument cluster.
5-12  Instruments and Controls

When the vehicle is started, this light flashes and a chime may come on to remind the driver to fasten their safety belt. Then the light stays on solid until the belt is buckled. This cycle may continue several times if the driver remains or becomes unbuckled while the vehicle is moving.

If the driver safety belt is buckled, neither the light nor the chime comes on.

Passenger Safety Belt Reminder Light

There is a passenger safety belt reminder light near the passenger airbag status indicator. See Passenger Sensing System on page 3-23.

Airbag Readiness Light

This light shows if there is an electrical problem with the airbag system. The system check includes the airbag sensor(s), passenger sensing system, the pretensioners (if equipped), the airbag modules, the wiring, and the crash sensing and diagnostic module. For more information on the airbag system, see Airbag System on page 3-16.

The airbag readiness light comes on for several seconds when the vehicle is started. If the light does not come on then, have it fixed immediately.
If the airbag readiness light stays on after the vehicle is started or comes on while driving, it means the airbag system might not be working properly. The airbags in the vehicle might not inflate in a crash, or they could even inflate without a crash. To help avoid injury, have the vehicle serviced right away.

If there is a problem with the airbag system, a Driver Information Center (DIC) message may also come on. See Vehicle Messages on page 5-31.

**Passenger Airbag Status Indicator**

The vehicle has a passenger sensing system. See Passenger Sensing System on page 3-23 for important safety information. The center display has a passenger airbag status indicator.

**United States**

![Passenger Airbag Status Indicator - United States](image)

**Canada**

![Passenger Airbag Status Indicator - Canada](image)

When the vehicle is started, the passenger airbag status indicator will light ON and OFF, or the symbol for on and off, for several seconds as a system check. Then, after several seconds, the status indicator will light either ON or OFF, or the on or off symbol to let you know the status of the front outboard passenger frontal airbag and knee airbag.

If the word ON or the on symbol is lit on the passenger airbag status indicator, it means that the front outboard passenger frontal airbag and knee airbag are allowed to inflate.

If the word OFF or the off symbol is lit on the passenger airbag status indicator, it means that the passenger sensing system has turned off the front outboard passenger frontal airbag and knee airbag.

If, after several seconds, both status indicator lights remain on, or if there are no lights at all, there may be a problem with the lights or the passenger sensing system. See your dealer for service.
5-14 Instruments and Controls

⚠️ Warning

If the airbag readiness light ever comes on and stays on, it means that something may be wrong with the airbag system. To help avoid injury to yourself or others, have the vehicle serviced right away. See Airbag Readiness Light on page 5-12 for more information, including important safety information.

Charging System Light (12-Volt Battery)

This light comes on if a condition exists that may require the vehicle to be taken in for service. If the light comes on, take the vehicle to your dealer for service as soon as possible.

Brake System Warning Light

The vehicle brake system consists of two hydraulic circuits. If one circuit is not working, the remaining circuit can still work to stop the vehicle. For normal braking performance, both circuits need to be working. If the warning light comes on, there is a brake problem. Have the brake system inspected right away.

Metric English

This light comes on briefly when the vehicle is turned on. If it does not come on then, have it fixed so it will be ready to warn if there is a problem. If the light comes on and stays on, there is a base brake problem.
**Warning**

The brake system might not be working properly if the brake system warning light is on. Driving with the brake system warning light on can lead to a crash. If the light is still on after the vehicle has been pulled off the road and carefully stopped, have the vehicle towed for service.

**Electric Parking Brake Light**

This status light comes on when the parking brake is applied. If the light flashes and stays on after the parking brake is released, or while driving, there is a problem with the electric parking brake system.

If the light does not come on, or remains flashing, see your dealer. See *Electric Parking Brake on page 9-22* for more information.

**Service Electric Parking Brake Light**

The service electric parking brake light should come on briefly when the vehicle is in ON/RUN. If it does not come on, have the vehicle serviced by your dealer.

If this light stays on, there is a problem with a system on the vehicle that is causing the parking brake system to work at a reduced level. The vehicle can still be driven, but should be taken to a dealer as soon as possible. See *Electric Parking Brake on page 9-22*. If a message displays in the Driver Information Center (DIC), see *Brake System Messages on page 5-32*.

**Antilock Brake System (ABS) Warning Light**

The ABS warning light will come on briefly when the ignition is in ON/RUN. This is normal. If the light does not come on then, have it fixed so it will be ready to warn if there is a problem.

If the light stays on or comes on while driving, stop as soon as possible and turn the ignition off. Then start the vehicle again to reset.
5-16 Instruments and Controls

the system. If the light still stays on, or comes on again while driving, the vehicle needs service. See your dealer. If the regular brake system warning light is not on, the brakes will still work, but the antilock brakes will not work. If the regular brake system warning light is also on, the antilock brakes will not work and there is a problem with the regular brakes. See Brake System Warning Light on page 5-14.

Sport Mode Light

SPORT

This light comes on when Sport Mode is selected. See “Sport Mode” in Driver Selected Operating Modes on page 9-19 for more information.

Traction Off Light

This light comes on briefly while starting the vehicle. If it does not, have the vehicle serviced by your dealer. If the system is working normally, the indicator light then turns off.

The traction off light comes on when the Traction Control System (TCS) has been turned off by pressing and releasing the TCS/StabiliTrak button.

This light and the StabiliTrak OFF light come on when StabiliTrak is turned off.

If the TCS is off, wheel spin is not limited. Adjust driving accordingly.

See Traction Control/Electronic Stability Control on page 9-25.

StabiliTrak® OFF Light

This light comes on briefly while starting the vehicle. If it does not, have the vehicle serviced by your dealer.

This light comes on when the StabiliTrak system is turned off. If StabiliTrak is off, the Traction Control System (TCS) is also off.

If the StabiliTrak and TCS are off, the system does not assist in controlling the vehicle. Turn on the TCS and the StabiliTrak systems and the warning light turns off.

See Traction Control/Electronic Stability Control on page 9-25.
Traction Control System (TCS)/StabiliTrak® Light

This light comes on briefly when the vehicle is started.

If the light does not come on, have the vehicle serviced by your dealer. If the system is working normally, the indicator light turns off.

If the light is on and not flashing, the TCS, and potentially the StabiliTrak system have been disabled. A DIC message may display. Check the DIC messages to determine which feature(s) is no longer functioning and whether the vehicle requires service.

If the indicator/warning light is on and flashing, the TCS and/or the StabiliTrak system is actively working.

See Traction Control/Electronic Stability Control on page 9-25.

Tire Pressure Light

For vehicles with the Tire Pressure Monitor System (TPMS), this light comes on briefly when the vehicle is in ON/RUN. It provides information about tire pressures and the TPMS.

When the Light is On Steady

This indicates that one or more of the tires are significantly underinflated.

When the light flashes first and then is on steady

This indicates that there may be a problem with the Tire Pressure Monitor System. The light flashes for about one minute and stays on steady until the vehicle is in OFF. This sequence repeats each time the vehicle is in ON/RUN. See Tire Pressure Monitor System on page 10-34.

Security Light

A message in the Driver Information Center (DIC) may also display. See Tire Messages on page 5-36. Stop as soon as possible, and inflate the tires to the pressure value shown on the Tire and Loading Information Label. See Tires on page 10-26.
5-18 Instruments and Controls

The security light should come on briefly as the vehicle is started. If it does not come on, have the vehicle serviced by your dealer. If the system is working normally, the indicator light turns off.

If the light stays on and the vehicle does not start, there could be a problem with the theft-deterrent system. See Immobilizer Operation on page 2-13.

Vehicle Ready Light

The vehicle ready light comes on whenever the vehicle is ready to be driven.

High-Beam On Light

This light comes on when the high-beam headlamps are in use. See Headlamp High/Low-Beam Changer on page 6-1 for more information.

Daytime Running Lamps (DRL) Indicator Light

If equipped, this light turns on whenever the Daytime Running Lamps are in use.

See Daytime Running Lamps (DRL) on page 6-2.

Lamps On Reminder

This light comes on when the exterior lamps are in use. See Exterior Lamp Controls on page 6-1.

Cruise Control Light
For vehicles with cruise control, the cruise control light is white when the cruise control is on and ready, and turns green when the cruise control is set and active. The light turns off when the cruise control is turned off. See Cruise Control on page 9-27.

Door Ajar Light

This light comes on, when a door is open or not securely latched.

Information Displays

Center Stack Display

The center stack screen displays Charging, Power Flow, and Energy Information. See the information that follows.

Climate Control, Infotainment, and Vehicle Personalization information also displays in this screen. For more information on these systems, see:

- Automatic Climate Control System on page 8-1.
- Infotainment on page 7-1.
- Vehicle Personalization on page 5-37.

The center stack controls only need a light touch to operate and work best with bare hands. The controls will work with most gloves although they may take longer to respond. Use the finger pad rather than the finger tip to minimize response time. If the controls are not responding, remove the gloves.

To view the Power Flow, Charging, and Energy Information, press the button on the center stack.

Power Flows

To view the Power Flow screens, press the button on the center stack then press the Power Flow button at the bottom of the touch screen. The Power Flow screens indicate the current system operating condition. The screens show the energy flow.
5-20 Instruments and Controls

Battery Power – Battery is active with energy flowing to the wheels.

Battery Power – Vehicle is stationary and no power is flowing to the wheels.

Regen Power Recovery – Power from the wheels returns to the battery during regenerative braking or coasting.

Power Off – No power is flowing to the wheels.

Programmable Charging

DC Charging

This screen indicates fast charging is active and 80% of the charge process is complete. Charge Power indicates the rate of charge, i.e. Low, Medium or High. High indicates the fastest possible charge rate. The Stop button can be used to stop the charge process at any time.
Instruments and Controls 5-21

This screen indicates that fast charging is active with an estimated 80% completion time of 3:00 PM.

This screen indicates that fast charging is no longer active and an error was detected with the charging station.

This screen indicates that the vehicle’s fast charging system has been disabled, and the standard charging cord should be used.

This screen indicates that the battery has fully charged, but the fast charge process is still remaining active to condition the battery. The fast charge process can be manually stopped at this point.

**Important Information About Portable Electric Vehicle Charging**

- Charging an electric vehicle can stress a building’s electrical system more than a typical household appliance.
- Before you plug in to any electrical outlet, have a qualified electrician inspect and verify the electrical system (electrical outlet, wiring, junctions, and protection devices) for heavy-duty service at a 12 amp continuous load.
- Electrical outlets may wear out with normal usage or be damaged over time, making them unsuitable for electric vehicle charging.
- Check the electrical outlet/plug while charging and discontinue use if the electrical outlet/plug is...
hot, then have the electrical outlet serviced by a qualified electrician.

- When outdoors, plug into an electrical outlet that is weather-proof while in use.
- Mount the charging cord to reduce strain on the electrical outlet/plug.

**Warning**

Improper use of portable electric vehicle charge cords may cause a fire, electrical shock, or burns, and may result in damage to property, serious injury, or death.

- Do not use extension cords, multi-outlet power strips, splitters, grounding adaptors, surge protectors, or similar devices.

**Warning (Continued)**

- Do not use an electrical outlet that is worn or damaged, or one that will not hold the plug firmly in place.
- Do not use an electrical outlet that is not properly grounded.
- Do not use an electrical outlet that is on a circuit with other electrical loads.

See the charge cord user guide.

**Programmable Charging Modes**

This vehicle has three programmable charge modes. To view the current charge mode status in the center stack display, press the button on the center stack and then press the Charging button at the bottom of the touch screen.

The charge Start and charge Complete time estimations are also displayed on the screen. These estimations are most accurate when the vehicle is plugged in and in moderate temperature conditions. Also, to get an accurate time estimate, the vehicle uses an internal clock for Programmable Charging, not the clock in the center stack.

**Charge Mode Status**

**Immediately**: The vehicle starts charging as soon as it is connected to an electrical outlet. See *Plug-In Charging on page 9-32*.
Departure Time: The vehicle estimates the charging start time considering the programmed departure time for the current day of the week. Charging begins at the start time and is complete by the departure time only if sufficient time is allowed after the charge cord is plugged in.

Rate & Departure Time: The vehicle estimates the charging start time based on the utility rate schedule, utility rate preference, and the programmed departure time for the current day of the week. The vehicle will charge during the least expensive rate periods to achieve a full battery charge by the departure time. Electrical rate information from the utility company for the charging location is required for this mode.

Also, if the selected electric rate settings result in a very long charge completion time, the vehicle will start charging immediately upon plug-in. For example, if the electric rate table is set up with all “Peak” rates and the rate preference is to charge during “Off-Peak” rates only, then the vehicle will start charging immediately upon plug-in.

Charge Mode Selection

From any charge mode status screen, press Edit to change the charge mode.

Select one option:
• Immediately
• Departure Time
• Rate & Departure Time
5-24  Instruments and Controls

Charge Level Selection

The Charge Charge Level setting allows the vehicle’s charge level to be selected so it matches the capability of the charging location. If the vehicle consistently stops charging after plugging in, or if a circuit breaker continues to trip, reducing to a lower charge level setting may resolve the issue.

The charge level setting should be configured to match the electrical current rating for the electrical outlet that the charge cord is connected to. The charge level settings are:

- Maximum: Limits AC current to 12 amps
- Reduced: Limits AC current to 8 amps

Exact current levels may vary from the values shown in this manual. Please check the vehicle for the current available levels.

The charge level setting can be changed at any time while the center stack display is operable. From the Immediately charge mode status screen, select Change Charge Level. From the Departure Time or Rate & Departure Time charge mode status screens, select Settings and then Change Charge Level.

The charge level setting must be updated prior to the vehicle being charged and the charge level setting will reset to a default value when the vehicle is shifted from P (Park).

Warning

Using a charge level that exceeds the electrical circuit or electrical outlet capacity may start a fire or damage the electrical circuit. Use the lowest charge level until a qualified electrician inspects your electrical circuit capacity. Use the lowest charge level if the electrical circuit or electrical outlet capacity is not known.

Departure Time Entry

From the Departure Time or Rate & Departure Time charge mode status screen, press Settings to change the departure time to match your personal schedule.
1. For the Departure Time charge mode, press Edit Departure Time. Or, for the Rate & Departure Time charge mode, press Edit Schedule and then Edit Departure Time.

2. Press ▲ or ▼ to change the hours and minutes.

3. Press ▲ or ▼ to change AM or PM.

4. Press ▶ to exit the screen.

**Charge Rate Selection**

From the Rate & Departure Time screen, press Settings and then press Edit Schedule to select charge rate settings and edit the charge rate information.

Select one of the following:
- Select Rate Schedule.
- Edit Summer Rate Schedule.
- Edit Winter Rate Schedule.
- Edit Yearly Rate Schedule.
- Charge Rate Preference.

**Charge Rate Preference Selection**

From the Edit Schedule screen, press Charge Rate Preference.

Press one of the following options to select the Charge Rate Preference:
- Charge during Peak, Mid-Peak, and Off-Peak Rates: The vehicle can charge during any rate period to satisfy the next planned departure time. However, it will select when to charge to minimize the total cost of the charge.
- Charge during Mid-Peak and Off-Peak Rates: The vehicle will charge during Off-Peak and/or Mid-Peak rate periods only and will select when to charge to minimize the total cost of the charge.
- Charge during Off-Peak Rates: The vehicle will only charge during Off-Peak rate periods. Charging begins at the start time and is complete by the departure time only if sufficient time is allowed after the charge cord is plugged in. For example, if the vehicle is plugged in for only one hour prior to the departure time, and the battery is completely discharged, the vehicle will not be fully charged by the departure time regardless of the rate selection.
Also, if the selected electric rate settings result in a very long charge completion time, the vehicle will start charging immediately upon plug-in. For example, if the electric rate table is set up with all “Peak” rates and the rate preference is to charge during “Off-Peak” rates only, then the vehicle will start charging immediately upon plug-in.

Electric Rate Plan Selection
Electric rates, or cost per unit, may vary based on time, weekday/weekend, and season. During the day when the demand for electricity is high, the rates are usually higher and called Peak rates. At night when the demand for electricity is low, the rates are usually lower and called Off-Peak rates. In some areas, a Mid-Peak rate is offered.

Contact the utility company to obtain the rate schedule for your area. The summer and winter start dates must be established to use a summer/winter schedule.

From the Edit Schedule screen, select Summer/Winter or Yearly as the preferred rate schedule.

**Summer/Winter Schedule Start Date Entering**
With Summer/Winter as the preferred rate schedule, from the Edit Schedule screen press Edit Summer Rate Schedule and the press Edit next to the dates for the summer rate schedule.

1. Press Summer Start.
2. Press ▲ or ▼ to set the month and day for the start of summer.
4. Press ▲ or ▼ to set the month and day for the start of winter.

**Electric Rate Schedule Editing**
From the Edit Schedule screen press Edit Summer Rate Schedule, Edit Winter Rate Schedule, or Edit Yearly Rate Schedule.
1. Press the color bar for weekday or weekend.
   • Weekdays are Monday through Friday and use the same rate schedule.
   • Weekends are Saturday and Sunday and use the same rate schedule.
   Both weekday and weekend schedules must be set. The rate schedule only applies for a 24-hour period, starting at 12:00 AM and ending at 12:00 AM. There can be five rate changes for each day; not all must be used.

2. Select Peak, Mid-Peak, or Off Peak and use ▲ or ▼ to enter the end time.
   The finish times must be consecutive. If a finish time does not follow a start time, the error message displays “An invalid entry was found in the data entered. Please re-enter data.”

3. Press OK.

**Priority Charging**

The priority charging feature will work in Departure Time and Rate & Departure Time charging modes. This feature is designed to ensure that the high voltage battery pack has a minimal amount of energy prior to delaying a charge. Upon completion of priority charging the vehicle will return to normal Programmable Charging operation.

The feature can be enabled/disabled by selecting On/Off from the settings screens. When enabled, Priority Charging will only prevent Programmable Charging while the battery is recharged from a depleted state to a level allowing 40% of the driving range.

**Temporary Charge Mode Override and Cancel**

Programmed delayed charge modes can be temporarily overridden to an immediate charge mode for one charge cycle. Also, the next planned departure time can be temporarily overridden for one charge cycle. In addition to the in-vehicle overrides via the center stack, there are other ways to temporarily override a delayed charge mode. See **Plug-In Charging on page 9-32.**

**Temporary Override of a Delayed Charge Mode**

Delayed charge can be overridden from outside the vehicle by plugging in the vehicle, disconnecting the connector, and then immediately plugging back in again.
5-28 Instruments and Controls

The Temporary Charge Mode status screen will automatically display the revised charge complete time.

Charging Override/Interruption Pop-Up

The Charging Override/Interruption pop-up will appear if any of the following conditions occur:

- The charging settings have been modified via OnStar through the website or the Mobile App. For example, the Departure Time Tables, the Rate Tables, or the Charge Mode were updated using the customer website (available in select regions).
- There was an unintended loss of AC power during the plug-in charge event. For example, there was a power outage or the charge cord was unplugged from the wall.
- The charge process was interrupted by the utility company via OnStar as authorized by the vehicle owner (available in select regions).

For more information see Utility Interruption of Charging on page 9-41.

Programmable Charging Disabled

When the Programmable Charging system is disabled, the Default Charge Mode status screen and the pop-up will display "- -:- -" for the charge Complete time. The Programmable Charging system will be disabled if the Charge Complete Time cannot be confidently estimated. If the Programmable Charging system is consistently disabled, see your dealer for details.
Energy Information

To view the Energy Details and Energy Tips, press the \( \text{button} \) on the center stack and then press the Energy Info button at the bottom of the touch screen.

Energy Details

The Energy Details screen shows how energy is being used since the last full charge.

![Energy Details Screen](image)

The historic view graph shows the energy usage.

Energy Tips

The Energy Tips screens provide a guide on how to improve energy usage to increase economy and range.

Driver Information Center (DIC)

The DIC display is in the instrument cluster. The DIC displays information about the vehicle. It also displays warning messages if a system problem is detected. See Vehicle Messages on page 5-31.

DIC Operation and Displays

View the DIC displays by pressing the DIC buttons to the left of the steering wheel.

DIC Controls

CONFIG: Press to change the instrument cluster display configuration. See Instrument Cluster on page 5-7.
**5-30 Instruments and Controls**

**BACK:** Press to return to the previous screen, exit a screen, or return to the main menu. Press **BACK** to minimize the DIC menu display.

**SELECT:** Press the center of the knob to select the highlighted item. Turn the knob to scroll through the menu items.

**DIC Menu Items**

At the main DIC menu:

1. Turn the SELECT knob to scroll through the possible DIC menus.
2. Press the center of the SELECT knob when a menu item is highlighted to enter that menu.
3. Continue to turn and press the SELECT knob to scroll through and select the available menu items:
   - : Turn-by-Turn
   - /\: Trip
   - #: Tire Pressure
   - ℹ️: Vehicle Messages
   - : Units
   - 📚: Tutorial Mode and Open Source Software
   - 🎯: Turn-by-Turn
   - : Select this menu item to view the OnStar or Navigation System Turn-by-Turn guidance.
   - Trip
   - The trip display shows distance traveled and average economy since the last trip reset.
   - Reset the trip data by pressing and holding the SELECT button when Trip is displayed.
   - Tire Pressure
   - The display will show a vehicle with the approximate pressures of all four tires. Tire pressure is displayed in either kilopascals (kPa) or in pounds per square inch (psi).
   - If a low or high tire pressure is detected, a message is displayed advising to check the tire pressure in the specified tire. See Tire Pressure on page 10-32 and Tire Messages on page 5-36.

If the tire pressure display shows dashes instead of a value, there may be a problem with the vehicle. See your dealer for service.

**Vehicle Messages**

Turn the SELECT knob to scroll through any active warning messages. Press SELECT to review the messages.

**Units**

Turn the SELECT knob to change the unit display to Metric, US, or Imperial when the display is active. Press SELECT to confirm the setting. This will change the displays on the cluster and DIC to either metric or English (US) measurements.
Tutorial Mode and Open Source Software

Select this menu item to view a screen that explains some of the unique features of the cluster or the Open Source Software information for the cluster.

Tutorial mode is only available when the vehicle is in P (Park).

Vehicle Messages

Messages displayed in the DIC indicate the status of the vehicle or some action that may be needed to correct a condition. Multiple messages may display one after the other.

Messages that do not require immediate action can be acknowledged and cleared by pressing the SELECT knob. The messages requiring immediate action cannot be cleared until that action is performed. All messages should be taken seriously. Clearing the messages does not correct the problem.

Battery and Charging Messages

BATTERY SAVER ACTIVE

This message displays when the vehicle has detected that the 12-volt battery voltage has dropped and vehicle features are being disabled. The 12-volt battery saver system starts reducing certain features trying to save the charge of the 12-volt battery. Turn off unnecessary features to allow the battery to recharge. This message will also display when the high voltage battery is very low.

BATTERY TOO COLD, PLUG IN TO WARM

This message displays during extremely cold temperatures, when the vehicle will not start until the high voltage battery is warm enough.

Plug the vehicle in to an AC charging station and make sure the POWER button is off to allow the charging system to warm the high voltage battery, then the vehicle can be started. DC charging cannot be used to recover a cold high voltage battery.
5-32 Instruments and Controls

BATTERY WARM, AC COMPRESSOR TURNING ON
This message displays when the high voltage battery is too warm. The AC compressor will turn on to help cool the battery.

CHARGE CORD CONNECTED
This message displays when the charge cord is connected to the vehicle. The vehicle cannot be shifted out of P (Park) with the charge cord connected.

CHARGE VEHICLE SOON
This message displays when the high voltage battery is low and the vehicle needs to be charged.

LOW BATTERY
This message displays when the 12-volt battery voltage is low. See Battery on page 10-12.

OUT OF ENERGY, CHARGE VEHICLE NOW
This message displays when the high voltage battery is out of energy. The vehicle needs to be charged.

PROBLEM DETECTED WITH CHARGING STATION
This message displays when there is a problem with the high voltage charging station.

SERVICE BATTERY CHARGING SYSTEM
This message displays when there is a fault in the 12-volt battery charging system. Take the vehicle to your dealer for service.

SERVICE HIGH VOLTAGE CHARGING SYSTEM
This message displays when there is a problem with the high voltage charging system. See your dealer for service.

Brake System Messages

BRAKE FLUID LOW
This message displays when the brake fluid level is low. See Brake Fluid on page 10-11.

RELEASE PARKING BRAKE
This message displays if the electric parking brake is on while the vehicle is in motion. Release it before attempting to drive. See Electric Parking Brake on page 9-22.

SERVICE BRAKE ASSIST
This message displays when there is a problem with the brake boost system. When this message displays, the brake pedal may be harder to push and the stopping distance may be longer. Take the vehicle to your dealer for service.

SERVICE PARKING BRAKE
This message displays when there is a problem with the parking brake. Take the vehicle to your dealer for service.
**STEP ON BRAKE TO RELEASE PARK BRAKE**
This message displays when attempting to release the electric parking brake without the brake pedal applied. See *Electric Parking Brake* on page 9-22.

**Cruise Control Messages**
**CRUISE SET TO XXX**
This message displays when the cruise control is set and shows the speed it was set to. See *Cruise Control* on page 9-27.

**Door Ajar Messages**
**DOOR(S) OPEN, HOOD OPEN, HATCH OPEN**
A symbol will appear on the display showing the area that is open.

**Electric Drive Unit Messages**
**SHIFT TO PARK**
This message displays when the vehicle should be shifted to P (Park). This may appear when attempting to turn off the vehicle when it is not in P (Park).

**Key and Lock Messages**

**NO REMOTE DETECTED, PRESS BRAKE TO RESTART**
This message displays if the RKE transmitter is no longer detected in the vehicle. Press the brake pedal and the Power button to restart the vehicle, or press the Power button without pressing the brake pedal to turn the vehicle off. If the vehicle is turned off and a valid transmitter is not available, the vehicle will not restart.

**REMINDER: KEY LEFT IN VEHICLE**
This message displays when leaving the vehicle with the RKE transmitter still inside.

**REPLACE BATTERY IN REMOTE KEY**
This message displays when the battery in the RKE transmitter needs to be replaced.
5-34 Instruments and Controls

SERVICE KEYLESS START SYSTEM
This message displays when the keyless start system needs service. Take the vehicle to your dealer.

Lamp Messages

AUTOMATIC LIGHT CONTROL ON/OFF
A message will display when the automatic light control has been turned on or off.

CHECK LAMP or LAMP FAILURE
Depending on the lamp, one of these messages may display. See Bulb Replacement on page 10-16.

TURN SIGNAL ON
This message displays if the turn signal has been left on. Turn off the turn signal.

Propulsion Power Messages

PROPULSION POWER IS REDUCED
This message displays when the propulsion power is reduced and can affect the ability to accelerate. If this message is on, but there is no reduction in performance, proceed to your destination. The performance may be reduced the next time the vehicle is driven. The vehicle may be driven at a reduced speed while this message is on, but maximum acceleration and speed may be reduced.
This message is also displayed when the vehicle range is low.

Ride Control System Messages

LOW TRACTION
This message displays when the Antilock Brake System (ABS) is active and is working to assist the driver with control of the vehicle in difficult driving conditions.

SERVICE STABILITRAK
This message displays when there is a problem detected with the StabiliTrak system. The vehicle is safe to drive, but the StabiliTrak system is not operational. See Traction Control/Electronic Stability Control on page 9-25.

SERVICE TRACTION CONTROL
This message displays when there is a problem detected with the Traction Control System (TCS). The vehicle is safe to drive, but the TCS is not operational. See Traction Control/Electronic Stability Control on page 9-25.
STABILITRAK OFF
This message displays when StabiliTrak is turned off. Adjust your driving accordingly.

TRACTION CONTROL OFF
This message displays when the Traction Control System (TCS) is turned off. Adjust your driving accordingly.

TRACTION CONTROL ON
This message displays when the Traction Control System (TCS) is turned on.

Airbag System Messages
SERVICE AIRBAG
This message displays if there is a problem with the airbag system. Take the vehicle to your dealer for service.

Security Messages
SERVICE THEFT ALARM
This message displays if there is a problem with the alarm. See your dealer for service.

SERVICE THEFT DETERRENT SYSTEM
This message displays if there is a problem with the theft-deterrent system. See your dealer for service.

Service Vehicle Messages
SERVICE AC SYSTEM
This message displays if there is a problem with the air conditioning system. Take the vehicle to your dealer for service.

SERVICE HEATER SOON
This message displays if there is a problem with the heater system. Take the vehicle to your dealer for service.

SERVICE POWER STEERING
This message displays if there is a problem with the power steering system. Take the vehicle to your dealer for service.

SERVICE VEHICLE SOON
This message displays if there is a problem with the vehicle. Take the vehicle to your dealer for service. Depending on the severity of a crash, this message may come on along with the airbag readiness light.

Starting the Vehicle Messages
PRESS BRAKE TO START VEHICLE
This message displays when attempting to start the vehicle without first pressing the brake pedal.
5-36 Instruments and Controls

PRESS BUTTON AGAIN TO TURN OFF
This message displays as a reminder to press the POWER button to turn the vehicle off when an attempt is made to turn off the vehicle while it is in motion.

Tire Messages

SERVICE TIRE MONITOR SYSTEM
This message displays if there is a problem with the Tire Pressure Monitor System (TPMS). See Tire Pressure Monitor Operation on page 10-35.

TIRE LEARNING ACTIVE
This message displays when the system is learning new tires. See Tire Pressure Monitor Operation on page 10-35.

TIRE LOW ADD AIR TO TIRE
This message displays when the pressure in one or more of the tires is low.
This message also displays LEFT FRONT, RIGHT FRONT, LEFT REAR, or RIGHT REAR to indicate the location of the low tire.
The low tire pressure warning light will also come on. See Tire Pressure Light on page 5-17.
If a tire pressure message appears on the DIC, stop as soon as you can. Inflate the tires by adding air until the tire pressure is equal to the values shown on the Tire and Loading Information label. See Tires on page 10-26, Vehicle Load Limits on page 9-10, and Tire Pressure on page 10-32.
You can receive more than one tire pressure message at a time. The DIC also shows the tire pressure values. See Driver Information Center (DIC) on page 5-29.

Vehicle Reminder Messages

ICE POSSIBLE DRIVE WITH CARE
This message is displayed when ice conditions are possible.

Vehicle Speed Messages

SPEED LIMITED TO XXX
This message displays when the vehicle speed is limited.
Vehicle Personalization

Personalization Menu

Settings can be made with the ignition ON and the vehicle not moving.

The following are all possible personalization features. Depending on the vehicle, some may not be available.

- **D** (Home): Press to access the Home Page Menu.
- **Q** or **R** (Up/Down): Press to scroll through the menus or setup items.
- **4** (Back): Press to exit, or return to the previous screen or menu.

To access the menu:

1. Press **D**.
2. Press **8** settings.

Press the menu item to select it. Each of the menus is detailed in the following information.

Settings menus and functions may vary depending on vehicle option.

The following list of menu items may be available:

- **Time & Date Settings**
- **Radio Settings**
- **Connection Settings**
- **Vehicle Settings**
- **Language**
- **Text Scroll**
- **Touch Beep Sound**
- **Max Startup Volume**
- **System Version**
- **DivX® VOD**

**Time & Date Settings**

Select the Time & Date Settings menu and the following may be displayed:

- **Set Time Format**
- **Set Date Format**
- **Set Time and Date**

**Automatic Clock Sync**

Select to set the 12/24 hour format.

Press 12h or 24h.

**Set Date Format**

Select to set the month and day format.

Press < or > to select the DD/MM/YYYY (day/month/year), MM/DD/YYYY (month/day/year), or YYYY/MM/DD (year/month/day) format.

**Set Time and Date**

Select to manually set the time and date.

1. Press ▲ or ▼ to adjust the value.
2. Press OK.

**Automatic Clock Sync**

Select to display the real or user time on the radio.
5-38 Instruments and Controls

Select On to display the real time or Off to display the time set by the user.

Radio Settings
Select the Radio Settings menu and the following may be displayed:
- Auto Volume
- Radio Tune Bar
- Radio Text
- XM Categories
- Radio Factory Settings

Auto Volume
This feature adjusts the radio volume to compensate for road and wind noise as the vehicle speeds up or slows down, so that the volume level is consistent.

Press < or > to select Off, Low, Medium, or High.

Radio Tune Bar
Select to display the radio station tune bar.
Select On or Off.

Radio Text
Select to display the radio broadcast information.
Select On or Off.

XM Categories
Select to set the selection of XM categories.

Radio Factory Settings
Select to restore the radio to the factory settings.

Bluetooth Settings
Select this feature to:
- Connect, disconnect, or delete a device
- Change or set a Personal Identification Number (PIN)
- Turn on or off the Bluetooth connection
- Check the device information

Change Ringtone
Select to set different ringtones.

Ringtone Volume
Select to set the ringtone volume.

Press < or >.

Vehicle Settings
Select the Vehicle Settings menu and the following may be displayed:
- Climate and Air Quality
- Comfort and Convenience
- Lighting
- Power Door Locks
Instruments and Controls 5-39

- Lock, Unlock Settings
- Rear Camera Option
- Vehicle Factory Settings
- Radio Power Down
- Charging Alerts

**Climate and Air Quality**
- Auto Fan Speed
- Auto Defog

**Auto Fan Speed**
Select to set the automatic fan speed.
Select Low, Medium, or High. Press \(\rightarrow\).

**Auto Defog**
Select to set the auto defog on or off.
Select On or Off. Press \(\rightarrow\).

**Comfort and Convenience**
Select the Comfort and Convenience menu and the following may be displayed:
- Chime Volume
- Auto Wipe in Reverse Gear

**Chime Volume**
Select to set the chime volume level.
Select Normal or High. Press \(\rightarrow\).

**Auto Wipe in Reverse Gear**
Select to set the Auto Wipe in Reverse Gear feature on or off.
When on, and the front wipers are on, the rear window wiper will turn on automatically when the vehicle is shifted into R (Reverse).
Select On or Off. Press \(\rightarrow\).

**Lighting**
Select the Lighting menu and the following may be displayed:
- Exit Lighting
- Vehicle Locator Lights

**Exit Lighting**
Select to set how long the exterior lamps stay on when leaving the vehicle and it is dark outside.
Select Off, 30 Sec, 60 Sec, or 120 Sec. Press \(\rightarrow\).

**Vehicle Locator Lights**
Select to turn the vehicle locator lights on or off.
Select On or Off. Press \(\rightarrow\).

**Power Door Locks**
Select Power Door Locks and the following may be displayed:
- Auto Door Unlock
- Unlocked Door Anti Lock Out
- Delayed Door Lock

**Auto Door Unlock**
Select to set which of the doors will automatically unlock when the vehicle is shifted into P (Park).
Select All Doors, Driver Door, or Off. Press 

**Unlocked Door Anti Lock Out**
When on, this feature will keep the driver door from locking when the door is open. If Off is selected, the Delayed Door Lock menu will be available and the door will lock as programmed through this menu.

Select On or Off. Press 

**Delayed Door Lock**
When on, this feature will delay the locking of the doors until five seconds after the last door is closed.

Select On or Off. Press 

**Lock, Unlock Settings**
Select Lock, Unlock Settings and the following may be displayed:

- Remote Unlock Light Feedback
- Remote Left in Vehicle Reminder

**Remote Unlock Light Feedback**
When on, the exterior lamps will flash when unlocking the vehicle with the RKE transmitter.

Select Flash Lights or Lights Off. Press 

**Remote Lock Light & Horn Feedback**
Select to set what type of feedback is given when pressing on the RKE transmitter.

Select Lights Only, Lights & Horn, Horn Only, or Off. Press 

**Remote Door Unlock**
Select to set which doors will unlock when pressing on the RKE transmitter.

Select All Doors or Driver Door. When set to Driver Door Only, the driver door will unlock the first time is pressed and all doors will unlock when the button is pressed a second time. When set to All Doors, all of the doors will unlock at the first press of . Press 

**Remote Left in Vehicle Reminder**
When on, the horn will chirp if the remote is left in the vehicle.

Select On or Off. Press 

**Remote Door Unlock**
Select to set which doors will unlock when pressing on the RKE transmitter.

Select On or Off. Press 

**Rear Camera Option**
Select Rear Camera Option and the following may be displayed:

- Guidelines

**Guidelines**
Select to turn the guidelines on or off. See Rear Vision Camera (RVC) on page 9-29.

Select On or Off. Press
**Vehicle Factory Settings**

Select Vehicle Factory Settings to return all of the vehicle personalization to the default settings. Press Vehicle Factory Settings when highlighted. Select Yes or No. Press.

**Radio Power Down**

Select Radio Power Down and the following may be displayed:
- Radio Power Down

**Radio Power Down**

Select to set the battery level to show the pop-up screen associated with the radio power down.
Select Off, 5%, 10%, 15%, 20%, or 25%. Press.

**Charging Alerts**

Select Charging Alerts and the following may be displayed:
- Charge Status Feedback
- Charge Power Loss Alert

**Charge Status Feedback**

Select to turn the Charge Status Feedback on or off.
Select On or Off. Press.

**Charge Power Loss Alert**

Select to turn the Charge Power Loss Alert on or off.
Select On or Off. Press.

**Charge Cord Theft Alert**

Select to turn the Charge Cord Theft Alert on or off.
Select On or Off. Press.

**Language**

Select the Language menu and the following may be displayed:
- English (US)
- Français (Canadien)
- Español
Select the language desired. Press.

**Text Scroll**

Select to set the Text Scroll feature on or off.
When on, if there is long text displayed on the audio screen, the text is scrolled. When off, the text is scrolled once and displayed in truncated form.
Select On or Off. Press.

**Touch Beep Sound**

Select to set the Touch Beep Sound feature on or off.
When on, a beep will be heard when pressing the screen. When off, the beep is canceled.
Select On or Off. Press.

**Max Startup Volume**

Select to set the startup volume of the infotainment system.
Press < or > select the desired volume between 9–21. Press.
5-42 Instruments and Controls

System Version
Press System Version when highlighted to view the version of the infotainment system. Press 4.

DivX VOD
Press DivX VOD when highlighted.

- DivX Video: DivX is a digital video format created by DivX, LLC, a subsidiary of Rovi Corporation. This is an official DivX Certified® device that plays DivX video. See divx.com for more information and software tools on how to convert files into DivX videos.

- DivX Video-on-Demand: This DivX Certified device must be registered in order to play purchased DivX Video-on-Demand (VOD) movies. To obtain a registration code, locate the DivX VOD section in the device setup menu. See vod.divx.com for more information on how to complete the registration.

Press 4.

Exterior Lamp Controls

The exterior lamp control is on the turn signal lever on the left side of the steering column.

There are four positions:

- 🕯️ (Headlamps): Turns on the headlamps together with the parking lamps and instrument panel lights.
- 🚗 (Parking Lamps): Turns on the parking lamps including all lamps, except the headlamps.

AUTO (Automatic): Turns the exterior lamps on and off automatically depending on the exterior light.

⊙ (OFF): Turns all the lamps off, except the Daytime Running Lamps (DRL).

The DRL automatically turn off when the vehicle is turned off.

Exterior Lamps Off Reminder

A reminder chime will sound when the headlamps or parking lamps are manually turned on when the ignition is off and a door is open. To disable the chime, turn the light off.

Headlamp High/Low-Beam Changer

The headlamps must be on for this feature to work.

Push the turn signal lever away from you to turn the high beams on.
6-2 Lighting

The light comes on in the instrument cluster while the high beams are on and the ignition is turned to ON/RUN.

To return to low beams, push the lever again or pull the lever toward you and release.

Flash-to-Pass

This feature is used to signal to the vehicle ahead that you want to pass.

Pull the turn signal lever toward you until the high-beam headlamps come on, then release the lever to turn them off.

Daytime Running Lamps (DRL)

DRL can make it easier for others to see the front of your vehicle during the day. Fully functional DRL are required on all vehicles first sold in Canada.

The DRL system makes the headlamps come on when the following conditions are met:
- The ignition is on.
- The exterior lamp control is in the AUTO position during the day.
- The shift lever is out of the P (Park) position.

The DRL system turns off when one of the following conditions is met:
- The ignition is off.
- The high-beam headlamps are on.
- The low-beam headlamps are on.
- The flash-to-pass feature is used.

The regular headlamp system should be used when needed.

Automatic Headlamp System

When it is dark enough outside and the exterior lamp control is in the automatic position, the headlamps come on automatically. See Exterior Lamp Controls on page 6-1.
Lights On with Wipers
If the windshield wipers are activated in daylight with the vehicle on, and the exterior lamp control is in AUTO, the headlamps, parking lamps, and other exterior lamps come on. The transition time for the lamps coming on varies based on wiper speed. When the wipers are not operating, these lamps turn off. Move the exterior lamp control to or to disable this feature.

Hazard Warning Flashers

The hazard warning flasher button is on the center stack.

(Hazard Warning Flasher): Press to make the front and rear turn signal lamps flash on and off. This warns others that you are having trouble. Press the button again to turn the flashers off.

When the hazard warning flashers are on, the turn signals will not work.

Turn and Lane-Change Signals

Move the lever all the way up or down to signal a turn.

The vehicle has a light sensor on top of the instrument panel. Make sure it is not covered, or the headlamps will be on when they are not needed.

The system may also turn on the headlamps when driving through a parking garage or tunnel.

When it is bright enough outside, the headlamps will turn off or may change to Daytime Running Lamps (DRL).

The automatic headlamp system turns off when the exterior lamp control or the ignition is off.
6-4 Lighting

An arrow on the instrument cluster flashes in the direction of the turn or lane change.

Raise or lower the lever until the arrow starts to flash to signal a lane change. Hold it there until the lane change is completed.

If the lever is moved momentarily to the lane change position, the arrow will flash three times.

The lever returns to its starting position whenever it is released.

If after signaling a turn or a lane change the arrow flashes rapidly or does not come on, a signal bulb may be burned out.

Replace any burned out bulbs. If a bulb is not burned out, check the fuse. See Fuses and Circuit Breakers on page 10-20.

Interior Lighting

Instrument Panel Illumination Control

This feature controls the brightness of the instrument panel controls and infotainment display screen. The thumbwheel is to the left of the steering column on the instrument panel.

D (Instrument Panel Brightness): Move the thumbwheel up or down to brighten or dim the instrument panel controls and infotainment display screen.

Courtesy Lamps

The courtesy lamps come on automatically when any door is opened and the dome lamp is in the DOOR position.

Dome Lamps

The dome lamp controls are in the overhead console.

Move the control to change the lamp setting.

OFF: Turns the lamps off, even when a door is open.
Lighting Features

Exit Lighting
If the dome lamps are in the DOOR position, they come on automatically when the vehicle is turned off. The exterior lamps and dome lamps remain on after the door is closed for a set amount of time, then automatically turn off.

To turn on the exterior lamps while the ignition is off:
1. Open the driver door.
2. Pull and release the turn signal lever.

The headlamps, parking lamps, and back-up lamps will turn on for a set amount of time, then automatically turn off.

This feature can be changed. See Vehicle Personalization on page 5-37.

Battery Power Protection
The battery saver feature is designed to protect the vehicle's 12-volt battery.

If some interior lamps and/or the headlamps are left on and the ignition is turned off, the battery rundown protection system automatically turns the lamp off after some time.

### Warning

Taking your eyes off the road for extended periods could cause a crash resulting in injury or death to you or others. Do not give extended attention to infotainment tasks while driving.

This system provides access to many audio and non-audio listings. To minimize taking your eyes off the road while driving, do the following while the vehicle is parked:

- Become familiar with the operation and controls of the audio system.
7-2 Infotainment System

- Set up the tone, speaker adjustments, and preset radio stations.

See Defensive Driving on page 9-4.

Tone Settings: Press menu, then tone settings from the AM or FM menu.

- EQ (Equalizer): Press < or > to select a sound style or turn off the sound style.
- Bass, Mid (Midrange), or Treble: Press – or + to change the desired sound style from −12 to +12.
- Fader or Balance: Adjust the front/rear or left/right speakers.
- Reset: Restore the settings back to default settings.

Press OK to exit Tone Settings.

Radio

AM-FM Radio

Audio Source Menu

✓ VOL ✓ (Volume): Press to decrease or increase the volume.

○ (Power): Press and hold to turn the system on and off.

♀ (Home Page): Press to enter the Home Page.

RDS (Radio Data System)

The radio may have RDS. The RDS feature is available for use only on FM stations that broadcast RDS information. This feature only works when the information from the radio station is available. In rare cases, a radio station could broadcast incorrect information that causes the radio features to work improperly. If this happens, contact the radio station.

While the radio is tuned to an FM-RDS station, the station name or call letters display.

Selecting a Band

Press 🎧, Multimedia, then Source ▼ to choose AM, FM, or SiriusXM, if equipped. The last station that was playing starts playing again.

Selecting an Auxiliary Device

Connect the auxiliary device to the AUX input terminal. Play will begin when the system has finished reading the information on the device.
7-6 Infotainment System

If the storage device is already connected, press Multimedia, and Source ▼, then select AUX from the drop-down menu.

Selecting a Station

Seek Tuning
If the radio station is not known:
Press SEEK to automatically search for available radio stations.
Hold and drag to the left or right of the radio station to automatically search for available radio stations.

Manual Tuning
Continue pressing TUNE to manually change the radio station.

Favorite List

From the AM or FM menu, press favorite list on the screen.
From the AM or FM menu, press favorite list on the screen.
Press ▲ or ▼ to scroll through the list. Press on the station to select it.

Station List

From the AM or FM menu, press FM station list on the screen.
Press ▲ or ▼ to scroll through the list. Press on the station to select it.

Update Station List

From the AM or FM menu, press FM station list on the screen.
Press ▲ or ▼ to scroll through the list. Press on the station to select it.

Category List

From the FM menu, press FM category list on the screen.
Press ▲ or ▼ to scroll through the list. Press on the station to select it.
Infotainment System  7-7

**Storing a Station as a Favorite**

Stations from all bands can be stored in any order in the favorite pages. Up to five stations can be stored in each of the seven favorites pages.

**Storing Stations**

To store the station to a position in the list, press the corresponding button 1–5 until a beep is heard.

1. Select the desired station.
2. Press < or > to select the desired page of saved favorites.
3. Hold down any of the preset buttons to save the current radio station to that button of the selected favorites page.

To change a preset button, tune to the new desired radio station and hold the button.

**Satellite Radio**

Vehicles with a SiriusXM® Satellite Radio tuner and a valid SiriusXM Satellite subscription can receive SiriusXM programming.

**SiriusXM Satellite Radio Service**

SiriusXM is a satellite radio service based in the 48 contiguous United States and 10 Canadian provinces. SiriusXM Satellite Radio has a wide variety of programming and commercial-free music, coast to coast, and in digital-quality sound. A service fee is required to receive the SiriusXM service. For more information, contact SiriusXM at www.siriusxm.com or 1-866-635-2349 (U.S.), and www.xmradio.ca or 1-877-209-0079 (Canada).

**Listening to SiriusXM Radio**

1. Press $\leftarrow$.
2. Press $\uparrow$ Multimedia.
3. Press Source $\downarrow$.
4. From the drop-down menu, press XM and the most recent listened to SiriusXM channel will display.
7-8 Infotainment System

Press ➔ to return to the HOME menu.

Selecting a Category
Continue pressing ➔ Category ➔ and the previous or next category will be selected.

Selecting a Channel
Press ➔ Channel ➔ and the previous or next channel will be selected within the same category.

Press and hold ➔ Channel ➔ to jump four channels backward or forward in the same category, then release the button at the desired channel.

Using the Preset Buttons
Up to seven favorites pages can be saved, and each page can store up to five channels.
To change a preset button, tune to the new desired channel and hold the button.

Listening to Preset Channels
1. Continue pressing ◀ or ▶ to select the desired favorites page.
2. Press the preset button to listen to the channel saved to that button.

Using the SiriusXM Menu
Operation
1. Press MENU on the XM radio screen.
2. Press the menu to select the desired item or to display the detail menu item.
3. Press ➔ to return to the previous menu.

Favorite List
1. Press favorite list from the XM menu. The favorite list information is displayed.
2. Press ▲ or ▼ to find the desired station. Tune to the station by selecting it.

**Channel List**
1. Press XM channel list from the XM menu. The channel list is displayed.
2. Press ▲ or ▼ to find the desired channel. Tune to the channel by selecting it.

**Category List**
1. Press XM category list from the XM menu. The category list is displayed.
2. Press ▲ or ▼ to find the desired category. Tune to the category by selecting it.

**Direct Access**
1. Press direct access from the XM menu. The direct access screen is displayed.
2. Press the channel number to tune to the desired channel.

3. Press OK.

**Tone Settings**
From tone settings menu, the sound features can be set up for SiriusXM audio and each audio player's functions.
1. Press tone settings from the XM menu. The tone settings screen is displayed. See “Tone Settings” under *Operation on page 7-4*.
2. Press OK.

**Radio Reception**
Frequency interference and static can occur during normal radio reception if items such as mobile phone chargers, vehicle convenience accessories, and external electronic devices are plugged into the accessory power outlet. If there is interference or static, unplug the item from the accessory power outlet.

**FM**
FM signals only reach about 16 to 65 km (10 to 40 mi). Although the radio has a built-in electronic circuit that automatically works to reduce interference, some static can occur, especially around tall buildings or hills, causing the sound to fade in and out.

**AM**
The range for most AM stations is greater than for FM, especially at night. The longer range can cause station frequencies to interfere with each other. Static can occur when things like storms and power lines interfere with radio reception. When this happens, try reducing the treble on the radio.

**SiriusXM® Satellite Radio Service**
SiriusXM Satellite Radio Service gives digital radio reception from coast to coast in the 48 contiguous United States, and in Canada. Just as with FM, tall buildings or hills can
7-10 Infotainment System

interfere with satellite radio signals, causing the sound to fade in and out. In addition, traveling or standing under heavy foliage, bridges, garages, or tunnels may cause loss of the SiriusXM signal for a period of time.

Cellular Phone Usage
Cellular phone usage can cause interference with the vehicle's radio.

Multi-Band Antenna
The multi-band antenna is on the roof of the vehicle. The antenna is used for the AM-FM radio, OnStar, the SiriusXM Satellite Radio Service System, and GPS (Global Positioning System), if the vehicle has these features. Keep the antenna clear of obstructions for clear reception.

If the vehicle has a sunroof, the performance of the features listed above may be affected if the sunroof is open.

Audio Players

USB Port

Using the USB Port
The infotainment system can play music or movies by connecting an auxiliary device to the USB port.

USB Support
The USB connector is in the center stack, and uses the USB 2.0 standard.

USB Supported Devices
- USB Flash Drives
- Portable USB Hard Drives
- 2G–5G iPod nano®
- 1G–3G iPod touch®
- 120GB/160GB iPod classic®
- 3G/3GS/4/4S iPhone®

Not all iPods and USB drives are compatible with the USB port.

Make sure the iPod has the latest firmware from Apple® for proper operation. iPod firmware can be updated using the latest iTunes® application. See www.apple.com/itunes.

For help with identifying your iPod, go to www.apple.com/support.

The USB port can play both lower and upper case .mp3, .wma, .ogg, and .wav files stored on a USB storage device.

USB Supported File and Folder Structure
The Infotainment system supports:
- Up to 2,500 folders.
- Up to 10 folders in depth.
- Up to 2,500 music files.
- Up to 2,500 photo files.
- Up to 250 movie files.
- ID3 Tag (versions 1.0/1.1/2.2/2.3/2.4).
- FAT16.
Connecting a USB Storage Device or iPod/iPhone

To connect a USB storage device, connect the device to the USB port.

To connect an iPod/iPhone, connect one end of the device's cable to the iPod/iPhone and the other end to the USB port.

The iPod/iPhone charges while it is connected to the vehicle if the vehicle is in ACC/ACCESSORY, ON/RUN, or Service Only Mode. See Power Button on page 9-14. When the vehicle is turned off, the iPod/iPhone automatically powers off and will not charge or draw power from the vehicle's battery.

For more information on USB usage, see “Audio System Information” under Pictures and Movies (Audio System) on page 7-28 or Pictures and Movies (Movie System) on page 7-35.

Auxiliary Devices

Using the Auxiliary Input Jack

Settings menus and functions may vary depending on vehicle options.

The auxiliary input jack in the center stack can be used to connect external audio devices such as an iPod®, iPhone®, MP3 player, CD player, and other supported devices for use as another source for audio listening. This input jack is not an audio output; do not plug headphones into the front auxiliary input jack.

The infotainment system can play music or movies connected by the auxiliary device.

Play will begin when the system has finished reading the information on the device.

Playing Music

Movies (Picture System) on page 7-33 or Pictures and Movies (Audio System) on page 7-28 or Pictures and Movies (Movie System) on page 7-35.

Playing Movies

Movies are not available while driving.
7-12 Infotainment System

If the USB storage device is already connected:

1. Press \-quarters-circle
2. Press \-picture & movie.
3. Press Source \-.
4. Press USB (Movie).

For iPod/iPhone, connect the iPod/iPhone to the AUX input terminal by using the AUX cable for iPod/iPhone to play movie files.

Using the AUX Movie Menu

1. Press MENU from the AUX movie screen. The AUX menu is displayed.
2. Press the desired menu.
   - tone settings: Adjust the sound setup. See "Tone Settings" under Operation on page 7-4.
   - clock/temp display: To display the clock and temperature on the full screen, select On or Off.
   - display settings: Adjust the brightness and contrast of the screen.
3. Press \-.

Navigation

OnStar® System

If equipped, this vehicle has a comprehensive, in-vehicle system that can connect to a live Advisor for Emergency, Security, Navigation, Connection, and Diagnostic Services.

For safety, some features are disabled while the vehicle is in motion.

Control Panel Overview

OnStar Light

The OnStar system status light is next to the OnStar buttons. If the status light is:

- Solid Green: System is ready.
- Flashing Green: On a call.
- Red: Indicates a problem.

OnStar Buttons

\- : Press to speak to an Advisor.
Make a call, end a call, or answer an incoming call.

Give OnStar Hands-Free Calling voice commands.

Give OnStar Turn-by-Turn Navigation voice commands. Requires the available Directions and Connections service plan.

Press $ to mute the Turn-by-Turn Navigation voice guidance.

Press Q to move to the navigation settings menu.

- Press update route to update the route, then press Yes.
- Press Cancel route to cancel it or No to not update the route.

Press # to give OnStar Hands-Free Calling voice commands.

Press % to give OnStar Turn-by-Turn Navigation voice commands for automated directions.

- Press 1 to hide the Turn-by-Turn Navigation screen. When the route is changed, the Turn-by-Turn Navigation screen is displayed. The Turn-by-Turn Navigation screen is only displayed on the AM/FM/XM radio mode and AUX/USB/iPod mode.

- Press to mute the Turn-by-Turn Navigation voice guidance.

- Press my destination to check the destination. The destination name and remaining distance to destination are displayed on the screen for about five seconds. Then the current Turn-by-Turn Navigation information is displayed.

- Press route preview to preview the route. The distance information among turns from current position to destination can be checked. Check the distance information by pressing ▲ or ▼. If there is no operation for about five seconds, the current Turn-by-Turn Navigation information is displayed.
7-14  Infotainment System

- Press repeat to repeat the Turn-by-Turn Navigation voice guidance.
- While the route is calculating, only the Cancel route menu is activated.

Blue OnStar

Press \( Q \) to be connected to a specially trained OnStar Advisor who can verify account information and answer questions about the system.

Emergency

With Automatic Crash Response, the built-in system can automatically connect to help in a crash even if you cannot ask for it.

Press \( E \) to connect to an Emergency Advisor. GPS technology is used to identify the vehicle location and can provide critical information to emergency personnel. The Advisor is also trained to offer critical assistance in emergency situations.

OnStar SMS

When the Short Message Service (SMS) is received by the vehicle, a pop-up screen with the message is displayed.

OnStar Welcome

When the user joins and operates the OnStar service for the first time, the pop-up screen “Get OnStar started now please push the blue button” is displayed.

Phone

Bluetooth (Overview)

If equipped with Bluetooth® capability, the system can interact with many Bluetooth phones, PDAs, or other devices to:

- Place and receive hands-free calls.
- Transmit hands-free data.
- Play audio streaming files.

The device must be paired first. See “Pairing” under Bluetooth (Infotainment Controls) Bluetooth (Overview) on page 7-14 or Bluetooth (Infotainment Controls) on page 7-16.

To minimize driver distraction, before driving, and with the vehicle parked:

- Become familiar with the features of the cell phone. Organize the phone book and contact lists clearly and delete
duplicate or rarely used entries. If possible, program speed dial or other shortcuts.

- Review the controls and operation of the infotainment system.
- Pair cell phone(s) to the vehicle. The system may not work with all cell phones. See “Pairing” in this section.
- See “Storing and Deleting Phone Numbers” in this section.

**Warning**

When using a cell phone, it can be distracting to look too long or too often at the screen of the phone or the infotainment system. Taking your eyes off the road too long or too often could cause a crash resulting in injury or death. Focus your attention on driving.

Vehicles with a Bluetooth system can use a Bluetooth-capable cell phone with a Hands-Free Profile to make and receive phone calls. The infotainment system is used to control the system. The system can be used while in ACC/ACCESSORY, ON/RUN or Service Only Mode. See Power Button on page 9-14. Not all phones support all functions and not all phones work with the Bluetooth system. See www.gm.com/bluetooth for more information about compatible phones.

There may be restrictions on using Bluetooth wireless technology in some locations.

Due to the variety of Bluetooth devices and their firmware versions, the device may respond differently when performing over Bluetooth.

Refer to the cell phone manufacturer’s user guide for questions about the phone’s Bluetooth functionality.

**Bluetooth Controls**

For vehicles equipped with Bluetooth capability, use the buttons on the infotainment system and the steering wheel to operate the system.

**Steering Wheel Controls**

- SEEK or SEEK \(\uparrow\) (Next/Previous): Press to go to the next or previous radio station, song on an iPod, or file on a USB device (if equipped).
7-16 Infotainment System

(Push to Talk): Press to interact with Bluetooth or OnStar, if equipped. See Bluetooth (Overview) on page 7-14 or Bluetooth (Infotainment Controls) on page 7-16 or OnStar® System on page 7-12.

(Mute/End Call): Press to silence the vehicle speakers only. Press again to turn the sound on. Press to reject an incoming call, or end a current call.

(Volume): Press to increase or decrease the volume.

Audio System

When using the Bluetooth system, sound comes through the vehicle’s front audio system speakers and overrides the audio system. Use the volume bar during a call to change the volume level. The adjusted volume level remains in memory for later calls. The system maintains a minimum volume level.

Bluetooth (Infotainment Controls)

To use infotainment controls to access the menu system, see Overview on page 7-3.

Pairing

A Bluetooth-enabled cell phone must be paired to the Bluetooth system and then connected to the vehicle before it can be used. See your cell phone manufacturer’s user guide for Bluetooth functions before pairing the cell phone. If a Bluetooth phone is not connected, calls will be made using OnStar Hands-Free Calling, if available. See OnStar® System on page 7-12.

Pairing Information

- A Bluetooth phone with MP3 capability cannot be paired to the vehicle as a phone and an MP3 player at the same time.
- Up to five cell phones can be paired to the Bluetooth system.
- The pairing process is disabled when the vehicle is moving.
- Pairing only needs to be completed once, unless the pairing information on the cell phone changes or the cell phone is deleted from the system.
- Only one paired cell phone can be connected to the Bluetooth system at a time.
- If multiple paired cell phones are within range of the system, the system connects to the first available paired cell phone in the order that they were first paired to the system. To link to a different paired phone, see “Linking to a Different Phone” later in this section.

When the Bluetooth device and infotainment system are successfully paired, the phone book is downloaded automatically. However, the phone book may not be downloaded automatically.
Pairing a Phone

When there is no paired device on the infotainment system and the Simple Secure Pairing (SSP) is supported:

1. Press \( \text{D} \).
2. Press telephone, then press Yes.
4. Press the desired device to pair on the searched list screen.
5. Press Yes on the pop-up screen of the Bluetooth device and infotainment system.
6. When the Bluetooth device and infotainment system are successfully paired, the telephone screen is displayed on the infotainment system.

Pairing a Phone

When a paired device is on the infotainment system and the SSP is supported:

1. Press \( \text{D} \).
2. Press 8 settings.
5. Press pair device.
7. Press the desired device to pair on the searched list screen.
8. Press Yes on the pop-up screen of the Bluetooth device and infotainment system.
9. When the Bluetooth device and infotainment system are successfully paired, \(^{\text{BT}}\) \(\text{phone}\) is displayed on the pair device screen.
   - The connected phone is highlighted by \(\text{n}\).
   - \(^{\text{BT}}\) \(\text{phone}\) indicates the hands-free and phone music functions are enabled.
   - \(\text{phone}\) indicates only the hands-free function is enabled.
   - \(^{\text{BT}}\) indicates only Bluetooth music is enabled.

   The connected phone is highlighted by \(\text{n}\).
7-18 Infotainment System

Pairing a Phone
When there is no paired device on the infotainment system and the SSP is not supported:
1. Press 🛀.
2. Press 📱 telephone, then press Yes.
4. Press the desired device to pair on the searched list screen.
5. Input the Personal Identification Number (PIN) code (default: 1234) to the Bluetooth device. When the Bluetooth device and infotainment system are successfully paired, the telephone screen is displayed on the infotainment system.
When the connection fails, a failure message is displayed on the infotainment system.
If a Bluetooth device was previously connected, the infotainment system executes the auto connection. However, if the Bluetooth setting on the Bluetooth device is turned off, a failure message is displayed on the infotainment system.

Pairing a Phone
When a paired device is on the infotainment system and the SSP is not supported:
1. Press 🛀.
2. Press 📱 settings.
4. Press bluetooth settings.
5. Press pair device.
7. Press the desired device to pair on the searched list screen.
8. Input the Personal Identification Number (PIN) code (default: 1234) to the Bluetooth device. When the Bluetooth device and infotainment system are successfully paired, 📱 is displayed on the pair device screen.
The connected phone is highlighted by 5.

5 7 indicates the hands-free and phone music functions are enabled.

5 indicates only the hands-free function is enabled.

5 indicates only Bluetooth music is enabled.

Connecting a Bluetooth Device
1. Press (Bluetooth).
2. Select settings.
4. Press bluetooth settings.
5. Press pair device.
6. The paired device will show with 5 7 when connected.

Disconnecting the Bluetooth Device
1. Press (Bluetooth).
2. Select settings.
4. Press bluetooth settings.
5. Press pair device.
6. Press the name of the device to be disconnected.
7. Press OK.

Deleting a Paired Phone
1. Press (Bluetooth).
2. Select settings.
4. Press bluetooth settings.
5. Press pair device.
6. Press Delete.
7. Press Yes.

Bluetooth Music
Before playing Bluetooth music, read the following information.

- A cell phone or Bluetooth device that supports Advanced Audio Distribution Profile (A2DP) versions over 1.2 must be registered and connected to the product.

- A cell phone or Bluetooth device type to set/connect the item as a stereo headset.

- 5 will appear on the screen if the stereo headset is successfully connected.

- The sound played by the Bluetooth device is delivered through the infotainment system.
7-20 Infotainment System

- Bluetooth music can be played only when a Bluetooth device has been connected. To play Bluetooth music, connect the Bluetooth phone to the infotainment system.

- If the Bluetooth device is disconnected while playing phone music, the music is discontinued. The audio streaming function may not be supported in some Bluetooth phones. Only one function can be used at a time between the Bluetooth hands-free or Phone music function. For example, if you convert to Bluetooth hands-free while playing Phone music, the music is discontinued. Playing music from the car is not possible when there are no music files stored in the cell phone.

- For Bluetooth music to play, the music must be played at least once from the music player mode of the cell phone or Bluetooth device after connecting as a stereo headset. After being played at least once, the music player will automatically play upon entering play mode, and it will automatically stop when the music player mode ends. If the cell phone or Bluetooth device is not in the waiting screen mode, some devices may not automatically play in Bluetooth music play mode.

Playing Bluetooth Music

1. Press 🎧.
2. Press multimedia.
3. Press Source ▼.
4. Press Bluetooth, then select the connected Bluetooth music play mode.

Pause

Press ▶ II to pause.
Press ▶ II again to resume.

Skipping the Previous or Next File

Press ◀ or ▶ to select the previous or next file.

Search

Press and hold ◀ or ▶ to rewind or fast forward.

Playing a File Repeatedly

Press 🎧 during playback.
   - 1: Plays the current file repeatedly.
   - ALL: Plays all files repeatedly.
   - OFF: Returns to normal playback.

This function may not be supported depending on the cell phone.
Playing a File Randomly

Press \( \text{random} \) during playback.
- NO: Plays all files repeatedly.
- OFF: Returns to normal playback.

This function may not be supported depending on the cell phone.

Do not change the track too quickly when playing Bluetooth music.

Conditions that may occur when playing Bluetooth music:
- It takes some time to transmit data from the cell phone to the infotainment system.
- If the cell phone or Bluetooth device is not in the waiting screen mode, it may not automatically play despite being carried out from the Bluetooth music play mode.
- The infotainment system transmits the order to play from the cell phone in the Bluetooth music play mode. If this is done in a different mode, then the device transmits the order to stop. Depending on the cell phone’s options, this order to play/stop may take time to activate.
- If the Bluetooth music playback is not functioning, then check to see if the cell phone is in the waiting screen mode.
- Sounds may be cut off during the Bluetooth music playback.
- The infotainment system outputs the audio from the cell phone or Bluetooth device as it is transmitted.

Hands-Free Phone

General Information

Vehicles with a Hands-Free Phone system can use a Bluetooth-capable cell phone with a hands-free profile to make and receive phone calls. The infotainment system and voice control are used to operate the system. Not all phones support all functions and not all phones work with the Hands-Free Phone system.

Hands-Free Phone Controls

Use the buttons on the infotainment system and the steering wheel to operate the Hands-Free Phone system.

Steering Wheel Controls

Steering wheel controls can be used to:
- Answer incoming calls.
- Confirm system information.
- End a call.
- Decline a call.
- Cancel an operation.
- Make outgoing calls using the call list.

\( \text{Hands-Free} \) (Push to Talk): Press to answer incoming calls and to confirm system information. Press and hold for two to three seconds to access the call list.
7-22 Infotainment System

✓ / Mute/End Call: Press to end a call, decline a call, or cancel an operation.

Making a Call by Entering a Phone Number

1. Enter the phone number using the keypad on the telephone screen.
2. Press 5 on the screen or 5/# on the steering wheel controls.

If a wrong number is entered, press 1 to delete the number one digit at a time, or press and hold 1 to delete all digits of the number.

Switching a Call to the Cell Phone (Private Mode)

To switch the call from the cell phone to hands-free:
1. Press #.
2. Press # again to switch back to hands-free.

Turning the Microphone On and Off

Press # to turn the microphone on or off.

Calling by Redial

To call by using redial:
- Press #/# on the steering wheel controls to display the redial guidance screen.
- Press and hold # on the telephone screen.

Redialing is not possible when there is no call history.

Taking calls

When a phone call comes through the connected Bluetooth cell phone, the playing track will be cut off and the phone will ring with the relevant information displayed.

Press #/# on the steering wheel controls or press Accept on the screen.

To decline the call, press #/Mute on the steering wheel controls or press Reject on the screen.

Using the Phone Book Menu

1. Press Phone Book on the telephone screen.
2. Press ▲ or ▼ to scroll through the list.
3. Select the phone book entry to call.
4. Press the number to dial.

Searching for Phone Book Entries

1. Press Phone Book on the telephone screen.
2. Press \( \bigcirc \) on the phone book screen.

3. Use the keypad to input the name to search. For details, see “Searching for a Name” later in this section.

4. Select the phone book entry to call.

5. Press the number to dial.

When the Bluetooth device and infotainment system are successfully paired, the phone book will download. Some phones may not download automatically. If this happens, connect it again or proceed with the phone book download on the phone.

**Searching for a Name**

Select characters by using the keypad on the phone book screen. As characters are selected, the names that include those characters will display on the phone book screen. As more characters of the name are entered, the list of possible names is shortened.

To search for the name Alex:

1. Press (abc) to select the first character.
2. Press (jkl) to select the second character.
3. Press (def) to select the third character.
4. Press (wxy) to select the fourth character.

**Making a Call from Call History**

1. Press Call History on the telephone screen.

2. Press one of the following:
   - \( \bigcirc \) Dialed calls.
   - \( \bigotimes \) Missed calls.
   - \( \bigcirc \) Received calls.

3. Select the phone book entry to call.

**Making a Call with Speed Dial Numbers**

Press and hold the speed dial number using the keypad on the telephone screen.

Only speed dial numbers already stored on the cell phone can be used for speed dial calls. Up to two-digit speed dial numbers are supported.

For two-digit speed dial numbers, press and hold the second digit to make a call to the speed dial number.
7-24 Infotainment System

Downloadable Applications

Smartphone Link (Overview)

Before Using Smartphone Link

If equipped, the vehicle can connect to Pandora®, Stitcher SmartRadio™, or other available applications through the infotainment system. The applications must be downloaded to the device first, then connect the device to the infotainment system.

Pandora is a free Internet radio service that streams personalized radio stations based on artists, songs, genres, and comedians. Create stations using the Pandora website or smartphone application, then use thumbs up or thumbs down to personalize stations. To set up an account, or for more information, go to www.pandora.com. Pandora may not be available in Canada or Mexico.

Stitcher SmartRadio is an Internet radio service that streams news, sports, and entertainment shows through the audio system. Create personalized, on-demand stations or discover new shows through Stitcher’s preset stations. To set up an account, download the application from the Android Market or iTunes Store, or go to www.stitcher.com.

A phone or tablet with Internet connection and the application installed is required. Personal cell phone data plans are used. Make sure the latest version is installed on the device and the volume is turned up.

Smartphone Supported by Application

To use Applications:

- Connect Android™ phones through Bluetooth.

iPod/iPhone Error Messages and Solution

If the system fails to activate the application on the iPod/iPhone connected, an error message is displayed as, “Unable to start application, possible reasons.”

- Your iPhone is locked. To resolve, unlock the iPhone.
- You have another active application open. To resolve, close the other active application.
- You have not installed the application on your iPhone. To resolve, install the application on the iPhone.

iOS Version Error

If the iOS version of the iPhone is less than 4.0, the error message is displayed as, “Your iPhone does not allow this application to be opened on a USB connection. Please refer to owner’s manual.”
Activate the application on your iPhone, then press the desired application menu on the infotainment system.

**Connecting Application Error**

If the infotainment system fails to activate the application on the smartphone connected through Bluetooth wireless technology, the error message is displayed as, **"Connecting application error."**

- Reset all settings related to the phone, then press the desired application menu on the infotainment system.
- Reconnect the smartphone and infotainment system through Bluetooth wireless technology, then press the desired application menu on the infotainment system.
- When the application is stopped on the smartphone, it usually takes time to return to normal operation. Try to activate the application after 10-20 seconds.

To switch to another application while playing an application and connected through the USB port, press the HOME button on the iPod/iPhone, then press the application icon on the infotainment system.

**Switching Between a USB Connected Device and a Bluetooth Device**

When the iPhone is connected to the infotainment system through the USB port, and the infotainment system is connected to another phone through Bluetooth wireless technology, press iPhone or Bluetooth phone on the smartphone list menu to switch between the two applications.

**Displaying or Hiding Application Icons**

To display or hide application icons on the smartphone link menu:

1. Press 📗.
2. Press smartphone link.

3. Press SETTINGS.
4. Press the desired application icon to hide or display it on the smartphone link screen.
5. Press OK.

If the activated application is on the smartphone link menu, the 📗 is activated in the upper position of the HOME menu or playing screen.

**How to Connect Application**

This section explains a general operation. It may vary depending on the phone operation system, versions and/or application versions.
7-26 Infotainment System

To connect an application:
1. Install the application on the smartphone from Appstore or Playstore.
2. Connect the smartphone to the infotainment system through the USB port or Bluetooth.
   - iPhone: USB port
   - Android phone: Bluetooth
3. Activate the application.
4. Press \D\ to play the application through the Infotainment system. The smartphone link menu is displayed.
5. Press the application icon.
6. The application screen is displayed.

Smartphone Link (Pandora)
Some images and explanations may vary by phone operating systems, versions, and/or application (App) versions.

Using Pandora
1. Install the Pandora application on the smartphone.
2. Connect the smartphone to the infotainment system through the USB port or Bluetooth wireless technology.
   - iPhone: USB connection.
   - Android phone/BlackBerry phone: Bluetooth wireless technology.
3. Activate the Pandora application.
4. Press \^\.
5. Press smartphone link.
6. Press Pandora.

If the smartphone is not connected to the infotainment system or the application is not installed on the smartphone, the Pandora menu is not activated.

Thumbs Up and Thumbs Down
Rate tracks by using \ud83d\udc41\ (thumbs up) or \ud83d\udc42\ (thumbs down).

Pause
- Press \u23fa\ to pause.
- Press \u23eb\ to resume.

Changing Tracks
Press \u25c8\ to change to the next track.

Bookmark
To bookmark a favorite artist or track:
1. Press \u2708\ on the screen.
2. Press Artist or Track.
Infotainment System  7-27

Pandora Menus

Creating Stations from Currently Playing Music
1. Press MENU. The Pandora menu is displayed.
2. Press create station.
3. Press from currently playing.
4. Press Artist or Track.
5. Press the desired station. The station is added into the Pandora menu automatically.

Creating Stations by Searching by Artist or Track
1. Press MENU. The Pandora menu is displayed.
2. Press create station.
3. Press enter artist/track. The keypad is displayed.
4. Enter the artist or track name using the keypad, then press Create.
5. Press the desired station. The station is added into the Pandora menu automatically.

Listening to Stations
1. Press MENU. The Pandora menu is displayed.
2. Press ▲ or ▼ to scroll through the list. Select the desired station.

QuickMix
1. Press MENU. The Pandora menu is displayed.
2. Press QuickMix to listen to a selection of tracks from your stations.

Tone Settings
1. Press MENU. The Pandora menu is displayed.

Smartphone Link (Stitcher)

Some images and explanations may vary by phone operating systems, versions, and/or application (App) versions.

Using Stitcher™
1. Install the Stitcher application on the smartphone.
2. Connect the smartphone to the infotainment system through the USB port or Bluetooth wireless technology.
   - iPhone: USB connection.
   - Android phone/BlackBerry phone: Bluetooth wireless technology.
3. Activate the Stitcher application.
4. Press D.
5. Press smartphone link.
6. Press Stitcher. If the smartphone is not connected to the infotainment system or the application is not installed on the smartphone, the Stitcher menu is not activated.

**Thumbs Up and Thumbs Down**
Rate tracks by using 👍 (thumbs up) or 👎 (thumbs down).

**Pause**
- Press II to pause.
- Press ▶ to resume.

**Changing Stations**
Press ▶ to change to the next station.

**Saving Favorites**
To save a station as a favorite, press ✯ on the stitcher screen.

**Stitcher Menus**
The Stitcher Station menu displays available station data from the Stitcher server.
1. Press MENU. The Stitcher Station menu is displayed.
2. Press ▲ or ▼ to scroll through the list. Select the desired station.

**Tone Settings**
1. Press MENU. The Stitcher menu is displayed.

**Bluetooth Phone/Devices**

**Pictures and Movies (Audio System)**
The infotainment system can play the music files contained in the USB storage device or iPod/iPhone products.

**Audio System Information**
**Using MP3/WMA/OGG/WAV Files**
- Music files with .mp3, .wma, .ogg, and .wav file name extensions can be played.
- MP3 files that can be played are: Bit rate: 8 kbps ~ 320 kbps - Sampling frequency: 48 kHz, 44.1 kHz, 32 kHz, 24 kHz, 22.05 kHz, and 16 kHz.
- Files with a bit rate above 128 kbps will result in higher quality sound.
Infotainment System

• ID3 Tag information for MP3 files, such as the album name and the artist, can be played.
• To display album title, track title, and artist information, the file should be compatible with the ID3 Tag V1 and V2 formats.

Using USB Storage Devices and iPod/iPhone
• Use a USB or flash memory type storage device. Do not connect using a USB adaptor.
• Do not connect and reconnect the USB device repeatedly in a short time, as this may cause static electricity and problems using the device.
• Use a USB device with a metal connecting terminal.
• Connection with i-Stick Type USB storage devices may be faulty due to vehicle vibration.
• Do not touch the USB connecting terminal.

• Only USB storage devices formatted in FAT16/32, exFAT file system are recognized. NTFS and other file systems are not recognized.
• The time it takes to process files will depend on the USB storage device type and capacity, and the type of files stored.
• Some USB storage device files may not be compatible.
• Up to two USB devices and one iPod can be played through a USB hub. All devices may not be supported, depending on the performance of the USB hub. If there is not enough power supply, it may not operate normally.
• Do not disconnect the USB storage device while it is playing. This may cause damage to the product or affect the performance of the USB device.
• Disconnect the USB storage device when the ignition is turned off. If the ignition is turned on while the USB device is connected, the USB device may be damaged or may not operate normally.
• USB storage devices can only be connected for playing music/movies, viewing photo files, or upgrading.
• Do not use the USB terminal to charge USB accessory equipment. The heat generated may cause performance issues or damage.
• Store files in the top-level drive of the USB storage device. When the logical drive is separated from the device, only the USB music files from the top-level logical drive can be played. Music files stored on USB storage devices may not play normally if an application is loaded by partitioning a separate drive.
• Music files to which Digital Right Management (DRM) is applied cannot be played.
7-30 Infotainment System

- USB storage device capacity limit is 2,500 music files, 2,500 photo files, 250 movie files, 2,500 folders, and 10 stages of folder structure. The iPod/iPhone can play all music files supported, but will only display up to 2,500 files on the screen in alphabetical order.

- The following iPod/iPhone product models are supported:
  - iPod 2G nano®/iPod 3G nano/iPod 4G and 5G nano
  - iPod 120GB and 160GB classic®
  - iPod 1G, 2G, and 3G touch®
  - iPhone 3G and 3GS
  - iPhone 4/4S

- Only connect the iPod/iPhone with connection cables supported by iPod/iPhone products. Other connection cables cannot be used.

- The iPod/iPhone may be damaged if the ignition is turned off when it is connected to the vehicle. When not in use, disconnect the iPod/iPhone.

- When the iPod/iPhone is connected to the USB port by using the iPod/iPhone cable, the Bluetooth music is not supported.

- Connect the iPod/iPhone to the USB port by using the iPod/iPhone cable to play the music files. When the iPod/iPhone is connected to the AUX input terminal, the music file will not play.

- The iPod/iPhone playback functions and the information displayed may be different when played on the infotainment system.

- Refer to the table for the classification items related to the search function provided by the iPod/iPhone.

### USB Player

#### Playing Music from a USB Device

- Connect the USB device to the USB port.

- Play will start automatically after the system has finished reading the USB device.

- If a non-readable USB device is connected, an error message displays and the system will switch to the previous audio function.
If the USB device is already connected:

- Press D.
- Press Multimedia.
- Press Source R.
- Press USB.

To stop the USB device and select another media source, press Source R, then select the other source.

To remove the USB device, select another function, then remove the USB device.

Pause

- Press II to pause.
- Press ▶ to resume.

Changing to Next/Previous Files

- Press ▶ to change to the next file.
- Press ◀ within five seconds of the playback time to play the previous file.

Returning to the Beginning of the Current File

Press ◀ after five seconds of the playback time.

Scanning Forward or Backward

Press and hold ◀ or ▶ during playback to rewind or fast forward. Release the button to resume playback at normal speed.

Playing a File Repeatedly

Press ◐ during playback.

- 1: Plays the current file repeatedly.
- ALL: Plays all files repeatedly.
- OFF: Returns to normal playback.

Playing a File Randomly

Press ◆ during playback.

- NO: Plays all files randomly.
- OFF: Returns to normal playback.

Viewing Information on the Currently Playing File

Press the title during playback to display information about the current file playing.

- The information displayed includes the title, file name, folder name, and artist/album saved with the song.
- Incorrect information cannot be modified or corrected on the infotainment system.
- The information for songs expressed in special symbols or in unavailable languages may be displayed as “u.”
7-32 Infotainment System

Using the USB Music Menu
- Press MENU during playback.

Playing Music Files
- Connect the iPod/iPhone to the USB port.
- Play will start from the previously played point after the system has finished reading the USB device.
- If a non-readable USB device is connected, an error message displays and the system will switch to the previous audio function.

If the iPod/iPhone is already connected:
1. Press  ▲.
2. Press tone settings. The Tone Settings menu is displayed. See “Tone Settings” under Operation on page 7-4.

iPod/iPhone Player
This feature is limited to models supporting the iPod/iPhone connection.

To remove the device, select another function, then remove the device.

Pause
- Press ⅛ to pause.
- Press ▲ to resume.

Changing to Next/Previous Song
- Press  ▶ to change to the next song.
- Press  ◄ within two seconds of the playback time to play the previous file.

Returning to the Beginning of the Current File
Press  ◄ after two seconds of the playback time.

Scanning Forward or Backward
Press and hold  ◄ or  ▶ during playback to rewind or fast forward. Release the button to resume playback at normal speed.
Playing a File Repeatedly
Press \( \text{ } \) during playback.
- 1: Plays the current file repeatedly.
- ALL: Plays all files repeatedly.
- OFF: Returns to normal playback.

Playing a File Randomly
Press \( \text{ } \) during playback.
- NO: Plays all files randomly.
- OFF: Returns to normal playback.

Viewing Information on the Currently Playing Song
Press the title during playback to display information about the current song playing.
- The information displayed includes the title, file name, folder name, and artist/album saved with the song.

Incorrect information cannot be modified or corrected on the infotainment system.
- The information for songs expressed in special symbols or in unavailable languages may be displayed as “\( \text{ } \).”

Using the iPod Menu
- Press MENU during playback.
- Press the appropriate play mode.

Tone Settings
1. Press \( \text{ } \) on the iPod menu.

Pictures and Movies (Picture System)
The infotainment system can view picture files stored on a USB device.

Picture System Information
Caution for Using Picture Files
- File size:
  - JPG: Within 64 to 5,000 pixels (Width) and 64 to 5,000 pixels (Height).
  - BMP, PNG, GIF: Within 64 to 1,024 pixels (Width) and 64 to 1,024 pixels (Height).
- File extensions: .jpg, .bmp, .png, .gif. Animated .gif files are not supported.
- Some files may not operate due to a different recording format or the condition of the file.
7-34 Infotainment System

Viewing Pictures

1. Connect the USB device to the USB port.

2. Press the screen to open to full screen. Press the screen again to return to the previous screen.

If the USB device is already connected:

1. Press D.
3. Press Source R.
4. Press USB picture.

Some features are disabled while the vehicle is in motion.

Viewing a Slide Show

1. From the picture screen, press D. The slide show will start to play.
2. Press the screen to cancel the slide show during the slide show playback.

Viewing a Previous or Next Picture

Press ‹ or › from the picture screen.

Rotating a Picture

Press U or D from the picture screen.

Enlarging a Picture

Press Q from the picture screen.

Using the USB Picture Menu

1. Press MENU from the picture screen.

2. Press the appropriate menu:
   - picture file list: lists all picture files.
   - sort by title: shows pictures in title order.
   - sort by date: shows pictures in date order.
   - slide show time: allows selection of the slide show interval.
   - clock/temp display: allows selection of On or Off to show the clock and temperature on the full screen.
   - display settings: adjusts for Brightness and Contrast.
3. Press ‡ to exit.

**Pictures and Movies (Movie System)**

The infotainment system can play movie files stored on a USB device.

**Movie System Information**

**Caution for Using Movie Files**

- Available resolution: Within 720 x 576 (W x H) pixels.
- Frame rate: Less than 30 fps.
- Playable movie file: .avi, .mpg, .mp4, .divx, .xvid, .wmv. The playable movie file may not be played according to the codec format.
- Playable codec format: divx, xvid, mpeg-1, mpeg-4 (mpg4, mp42, mp43), wmv9 (wmv3).
- Playable audio format: MP3, AC3, AAC, WMA.
- Max video bitrate:
  - mpeg-1: 8 Mbps
  - mpeg-4 (mpg4, mp42, mp43): 4 Mbps
  - wmv9: 3 Mbps
  - divx 3: 3 Mbps
  - divx 4/5/6: 4.8 Mbps
  - xvid: 4.5 Mbps

- Max audio bitrate:
  - mp3: 320 Kbps
  - wma: 320 Kbps
  - ac-3: 640 Kbps
  - aac: 449 Kbps

- Movie files to which Digital Right Management (DRM) is applied may not be played.

**Playing a Movie File**

1. Connect the USB device to the USB port.
2. Press the screen to open to full screen. Press the screen again to return to the previous screen.

- If the USB device is already connected:
  1. Press ‡.
  2. Press picture & movie.
  3. Press Source ▼.
  4. Press USB movie.

Movie is not available while driving.

**Viewing a Slide Show**

From the picture screen, press ▶.

- The slide show will start to play.
- Press the screen to cancel the slide show during the slide show playback.
- The last played audio source will play as background music during the slide show playback.

**Pause**

- Press † to pause.
- Press ▲ to resume.
7-36  Infotainment System

Changing to Next/Previous Movie

- Press ▶ to change to the next file.
- Press ◄ within five seconds of the playback time to play the previous file.

Returning to the Beginning of the Current Movie

Press ◄ after five seconds of the playback time.

Scanning Forward or Backward

Press and hold ◄ or ▶ during playback to rewind or fast forward. Release the button to resume playback at normal speed.

Viewing Full Screen

Press ● from the movie screen. Press ● again to return to the previous screen.

Using the USB Movie Menu

1. Press MENU from the movie screen.

2. Press the appropriate menu:
   - movie file list: lists all movie files.
   - clock/temp display: allows selection of On or Off to show the clock and temperature on the full screen.
   - display settings: adjusts for Brightness and Contrast.
   - tone settings: shows the sound setup. See “Tone Settings” under Operation on page 7-4.

3. Press ● to exit.

Subtitle Language

If the movie file has a subtitle language, it can be viewed.

- Press ◄ from the movie screen.
- Press ◄ or ► on the pop-up screen.
- Press ▶ to close the pop-up screen.

If there is only one subtitle language, it can be set to On/Off.

Audio Language

If the movie file has an audio language, it can be used.

- Press ◄ from the movie screen.
- Press ◄ or ► on the pop-up screen.
- Press ▶ to close the pop-up screen.

If there is only one audio language, it cannot be set. Audio language can be set only when the movie file is the Divx File.
Trademarks and License Agreements

FCC Information

Bluetooth®
The Bluetooth word mark and logos are owned by the Bluetooth® SIG, Inc. and any use of such marks by General Motors is under license. Other trademarks and trade names are those of their respective owners.

DivX Certified® to play DivX® video, including premium content.

Covered by one or more of the following U.S. patents: 7,295,673; 7,460,668; 7,515,710; 7,519,274.

Passenger Compartment Air Filter ............. 8-6
Service .............................................. 8-6

Climate Control Systems

Automatic Climate Control System
The climate control buttons and the touch screen are used to adjust the heating, cooling, and ventilation.

Climate Control Buttons
1. Temperature Control
2. Defrost
3. Air Delivery Mode Control
4. Rear Window Defogger
5. Fan Control
6. TEMP (Air Conditioning/Heater Power)
7. AUTO (Automatic Operation)
8. Recirculation
8-2 Climate Controls

Climate Control Touch Screen
The fan, air delivery mode, recirculation, defrost, and rear window defogger can be controlled by pressing Climate Settings on the infotainment home screen. A selection can then be made on the climate settings page displayed on the center stack.

Climate Power Gauge
When the climate mode is changed, the Climate Power gauge displays the impact that the changes have on energy use. The higher the reading, the more energy is being used.

Automatic Operation
The system automatically controls the fan speed, air delivery, air conditioning, and recirculation in order to heat or cool the vehicle to the desired temperature.

When the indicator light is on or AUTO is displayed on the touch screen, the system is in full automatic operation. If the air delivery mode or fan setting is

1. TEMP (Air Conditioning/Heater Power)
2. Air Delivery Mode Controls
3. Outside Air Temperature Display
4. Defrost
5. AUTO (Automatic Operation)
6. Climate Power Gauge
7. Fan Control
8. Rear Window Defogger
9. Recirculation
10. Driver Temperature Display
manually adjusted, the auto indicator turns off and the display will show the selected settings. Auto operation can be turned off individually for climate settings.

For automatic operation:
1. Press AUTO on the button or on the touch screen.
2. Set the temperature. Allow the system time to stabilize. Then adjust the temperature as needed for best comfort.

(Fan Control): To increase or decrease the fan speed, press the fan controls on the touch screen or turn the fan control knob clockwise or counterclockwise. Turning the fan control to 0 turns the fan off. The fan must be turned on to run the air conditioning compressor.

Temperature Control: Turn clockwise or counterclockwise to increase or decrease the temperature.

Air Delivery Mode Control: To change the current airflow mode, press the air delivery modes on the touch screen or turn the air delivery mode control clockwise or counterclockwise.

Select from the following:
- (Vent): Air is directed to the instrument panel outlets.
- (Bi-Level): Air is divided between the instrument panel and floor outlets.
- (Floor): Air is directed to the floor outlets.
- (Defog): This mode clears the windows of fog or moisture. Air is directed to the floor, windshield, and side window outlets.
- (Defrost): Press the button or the touch screen to clear the windshield of fog or frost more quickly. Air is directed to the windshield and side window outlets. Do not drive the vehicle until all windows are clear.

(TEMP (Air Conditioning/Heater Power): Press the TEMP button or on the touch screen to turn the air conditioning or heater on and off. An indicator light comes on when it is in use. The air conditioning and heater does not operate when the fan control knob is at 0. Turning TEMP off reduces the electric power usage and extends the driving range.

(Recirculation): This mode recirculates and helps to quickly cool the air inside the vehicle. It can be used to prevent outside air and odors from entering the vehicle.

Press the button or on the touch screen to turn the recirculation mode on. An indicator light comes on to show that the recirculation is on. Press again to return to outside air mode.

Using the recirculation mode for extended periods may cause the windows to fog. If this happens, select the defrost mode.
8-4 Climate Controls

Using air conditioning and recirculation together for long periods of time may cause the air inside the vehicle to become too dry. To prevent this from happening, after the air in the vehicle has cooled, turn the recirculation mode off.

Rear Window Defogger

R (Rear Window Defogger):
Press the R button or on the touch screen to turn the rear window defogger on or off. An indicator light comes on to show that the feature is on.

The rear window defogger turns off after about 10 minutes. It can also be turned off by pressing R again or by putting the vehicle power button into the STOPPING THE VEHICLE/OFF position. If turned on again it runs for about five minutes before turning off.

⚠️ Caution

Using a razor blade or sharp object on the inside rear window can damage the antenna or defogger. Repairs would not be covered by the vehicle warranty. Do not stick anything to the rear window.

Air Vents

Adjustable air vents are in the center and on the side of the instrument panel.

Move the slats to change the direction of the airflow. The center air vent does not close completely.
Press the cover of the side air vents to open. Turn open slats clockwise or counterclockwise to direct airflow as needed. Close the cover to stop the airflow.

Additional air vents are located beneath the windshield and the driver and passenger side door windows, and in the footwells. These are fixed and cannot be adjusted.

**Operation Tips**

- Clear away any ice, snow, or leaves from air inlets at the base of the windshield that could block the flow of air into the vehicle.
- Keep the path under the front seats clear of objects to help circulate the air inside of the vehicle more effectively.
- Use of non-GM approved hood deflectors can adversely affect the performance of the system. Check with your dealer before adding equipment to the outside of the vehicle.

**Maintenance**

**Air Intake**

The air intake at the base of the windshield under the hood must be kept clear to allow the flow of air into the vehicle. Clear away any ice, snow, or leaves.
8-6 Climate Controls

Passenger Compartment Air Filter

The filter removes dust, pollen, and other airborne irritants from outside air that is pulled into the vehicle.

The filter should be replaced as part of routine scheduled maintenance. See Maintenance Schedule on page 11-2. To find out what type of filter to use, see Maintenance Replacement Parts on page 11-9.

1. Open the glove box completely and pull it up by each side to remove.

2. Push the two tabs upward and release the latches holding the service door. Lift the service door.

3. Remove the old air filter.

4. Install the new air filter.

5. Close the service door and latches.

6. Reinstall the glove box.

See your dealer if additional assistance is needed.

Service

This vehicle may have the new environmentally friendly refrigerant, R1234yf. This refrigerant has a significantly reduced global warming impact on the environment, compared to the traditional automotive refrigerant, R-134a. All vehicles have a label underhood that identifies the refrigerant used in the vehicle.

The refrigerant system should only be serviced by trained and certified technicians. The air conditioning evaporator should never be repaired or replaced by one from a salvage vehicle. It should only be replaced by a new evaporator to ensure proper and safe operation.

During service, all refrigerants should be reclaimed with proper equipment. Venting refrigerants directly to the atmosphere is harmful to the environment and may also create unsafe conditions based on inhalation, combustion, frostbite, or other health-based concerns.

Driving Information

Driving for Better Energy Efficiency

Use the following tips to help maximize energy efficiency and range.

In colder temperatures, while these efficiency tips will help, the electric vehicle driving range may be lower due to higher energy usage.

Driving Style

Efficiency Gauge (Instrument Cluster)

The ball indicator should be kept green and in the center of the gauge.

Inefficient acceleration is indicated when the ball turns yellow and travels above the center of the gauge.

Acceleration/Braking/Coasting

Avoid unnecessary rapid accelerations and decelerations.

Electric range is maximized at 80 km/h (50 mph) and below. Higher speeds use more energy and can significantly reduce electric range.

Use cruise control when appropriate.

Plan ahead for decelerations and coast whenever possible. For example, do not rush to traffic signals.

Do not shift to N (Neutral) to coast.

The vehicle recovers energy while coasting and braking in D (Drive) or L (Low).

Drive Mode and PRNDL Selection

Use Normal Mode when possible.

Sport Mode provides more responsive acceleration than Normal Mode but can reduce efficiency.

Use L (Low) in heavy stop-and-go traffic or when traveling downhill.

L (Low) requires less brake pedal application and provides a controlled, efficient way to slow the vehicle down.

Climate Setting

Using the heat and air conditioning systems decreases the energy available for electric driving.

Optimal energy efficiency is achieved with the heat, air conditioning, and fan turned off.

Operating with the TEMP button off is the most energy efficient climate setting as long as \(\text{ Temp }\) is not selected.

Use the heated seat feature instead of climate settings. Heating the seat uses less energy than heating the vehicle interior.
Drive and Operating 9-3

Use remote start to heat or cool the interior when the vehicle is plugged in to maximize the electric range by utilizing electricity from the electrical outlet.

In hot weather, avoid parking in direct sunlight or use sunshades inside the vehicle.

Turn off the front and rear window defog/defrost when they are no longer needed.

Avoid driving with the windows open at highway speeds.

Vehicle Charging/Maintenance

Charging

Keep the vehicle plugged in, even when fully charged, to keep the battery temperature ready for the next drive. This is important when outside temperatures are extremely hot or cold.

Maintenance

Always keep the tires properly inflated and the vehicle properly aligned.

The weight of excess cargo in the vehicle affects efficiency and range. Avoid carrying more than is needed. Avoid unnecessary use of electrical accessories. Power used for functions other than propelling the vehicle will reduce EV range.

Using a rooftop carrier will reduce efficiency due to additional weight and drag.

Distracted Driving

Distraction comes in many forms and can take your focus from the task of driving. Exercise good judgment and do not let other activities divert your attention away from the road. Many local governments have enacted laws regarding driver distraction. Become familiar with the local laws in your area.

To avoid distracted driving, always keep your eyes on the road, hands on the wheel, and mind on the drive.

- Do not use a phone in demanding driving situations. Use a hands-free method to place or receive necessary phone calls.
- Watch the road. Do not read, take notes, or look up information on phones or other electronic devices.
- Designate a front seat passenger to handle potential distractions.
- Become familiar with vehicle features before driving, such as programming favorite radio stations and adjusting climate control and seat settings. Program all trip information into any navigation device prior to driving.
- Wait until the vehicle is parked to retrieve items that have fallen to the floor.
- Stop or park the vehicle to tend to children.
9-4 Driving and Operating

- Keep pets in an appropriate carrier or restraint.
- Avoid stressful conversations while driving, whether with a passenger or on a cell phone.

⚠️ Warning
Taking your eyes off the road too long or too often could cause a crash resulting in injury or death. Focus your attention on driving.

Refer to the Infotainment section for more information on using that system, including pairing and using a cell phone.

Defensive Driving
Defensive driving means “always expect the unexpected.” The first step in driving defensively is to wear the safety belt. See Safety Belts on page 3-8.
- Assume that other road users (pedestrians, bicyclists, and other drivers) are going to be careless and make mistakes. Anticipate what they might do and be ready.
- Allow enough following distance between you and the driver in front of you.
- Focus on the task of driving.

Drunk Driving
Death and injury associated with drinking and driving is a global tragedy.

⚠️ Warning
Drinking and then driving is very dangerous. Your reflexes, perceptions, attentiveness, and judgment can be affected by even a small amount of alcohol. You can have a serious — or even fatal — collision if you drive after drinking.

(Continued)

Warning (Continued)
Do not drink and drive or ride with a driver who has been drinking. Ride home in a cab; or if you are with a group, designate a driver who will not drink.

Control of a Vehicle
Braking, steering, and accelerating are important factors in helping to control a vehicle while driving.

Braking
Braking action involves perception time and reaction time. Deciding to push the brake pedal is perception time. Actually doing it is reaction time.

Average driver reaction time is about three-quarters of a second. In that time, a vehicle moving at 100 km/h (60 mph) travels 20 m (66 ft), which could be a lot of distance in an emergency.
Helpful braking tips to keep in mind include:

- Keep enough distance between you and the vehicle in front of you.
- Avoid needless heavy braking.
- Keep pace with traffic.

If propulsion is disabled while the vehicle is being driven, brake normally but do not pump the brakes. If the brakes are pumped, the pedal could get harder to push down. If propulsion stops, there will still be some power brake assist but it will be used when the brake is applied. Once the power assist is used up, it can take longer to stop and the brake pedal will be harder to push.

Steering

Electric Power Steering

The vehicle has electric power steering. It does not have power steering fluid. Regular maintenance is not required.

If power steering assist is lost due to a system malfunction, the vehicle can be steered, but may require increased effort. See your dealer if there is a problem.

If the steering wheel is turned until it reaches the end of its travel and is held against that position for an extended period of time, power steering assist may be reduced.

If the steering assist is used for an extended period of time, power assist may be reduced.

Normal use of the power steering assist should return when the system cools down.

See specific vehicle steering messages under Service Vehicle Messages on page 5-35. See your dealer if there is a problem.

Curve Tips

- Take curves at a reasonable speed.

Steering in Emergencies

- Reduce speed before entering a curve.
- Maintain a reasonable steady speed through the curve.
- Wait until the vehicle is out of the curve before accelerating gently into the straightaway.

- There are some situations when steering around a problem may be more effective than braking.
- Holding both sides of the steering wheel allows you to turn 180 degrees without removing a hand.
- The Antilock Brake System (ABS) allows steering while braking.
9-6 Driving and Operating

Off-Road Recovery

The vehicle's right wheels can drop off the edge of a road onto the shoulder while driving. Follow these tips:

1. Ease off the accelerator and then, if there is nothing in the way, steer the vehicle so that it straddles the edge of the pavement.

2. Turn the steering wheel about one-eighth of a turn, until the right front tire contacts the pavement edge.

3. Turn the steering wheel to go straight down the roadway.

Loss of Control

Skidding

There are three types of skids that correspond to the vehicle's three control systems:

- Braking Skid — wheels are not rolling.
- Steering or Cornering Skid — too much speed or steering in a curve causes tires to slip and lose cornering force.
- Acceleration Skid — too much throttle causes the driving wheels to spin.

Defensive drivers avoid most skids by taking reasonable care suited to existing conditions, and by not overdriving those conditions. But skids are always possible.

If the vehicle starts to slide, follow these suggestions:

- Ease your foot off the accelerator pedal and steer the way you want the vehicle to go. The vehicle may straighten out. Be ready for a second skid if it occurs.

- Slow down and adjust your driving according to weather conditions. Stopping distance can be longer and vehicle control can be affected when traction is reduced by water, snow, ice, gravel, or other material on the road. Learn to recognize warning clues — such as enough water, ice, or packed snow on the road to make a mirrored surface — and slow down when you have any doubt.

- Try to avoid sudden steering, acceleration, or braking, including reducing vehicle speed by shifting to a lower gear. Any sudden changes could cause the tires to slide.
Remember: Antilock brakes help avoid only the braking skid.

Driving on Wet Roads
Rain and wet roads can reduce vehicle traction and affect your ability to stop and accelerate. Always drive slower in these types of driving conditions and avoid driving through large puddles and deep-standing or flowing water.

⚠️ Warning

Wet brakes can cause crashes. They might not work as well in a quick stop and could cause pulling to one side. You could lose control of the vehicle.

After driving through a large puddle of water or a car/vehicle wash, lightly apply the brake pedal until the brakes work normally.

(Continued)

Flowing or rushing water creates strong forces. Driving through flowing water could cause the vehicle to be carried away. If this happens, you and other vehicle occupants could drown. Do not ignore police warnings and be very cautious about trying to drive through flowing water.

Hydroplaning
Hydroplaning is dangerous. Water can build up under the vehicle’s tires so they actually ride on the water. This can happen if the road is wet enough and you are going fast enough. When the vehicle is hydroplaning, it has little or no contact with the road.

There is no hard and fast rule about hydroplaning. The best advice is to slow down when the road is wet.

Other Rainy Weather Tips
Besides slowing down, other wet weather driving tips include:
- Allow extra following distance.
- Pass with caution.
- Keep windshield wiping equipment in good shape.
- Keep the windshield washer fluid reservoir filled.
- Turn off cruise control.

Highway Hypnosis
Always be alert and pay attention to your surroundings while driving. If you become tired or sleepy, find a safe place to park the vehicle and rest.

Other driving tips include:
- Keep the vehicle well ventilated.
- Keep the interior temperature cool.
9-8 Driving and Operating

- Keep your eyes moving — scan the road ahead and to the sides.
- Check the rearview mirror and vehicle instruments often.

Hill and Mountain Roads
Driving on steep hills or through mountains is different than driving on flat or rolling terrain.
- Keep the vehicle serviced and in good shape.
- Check all fluid levels and brakes, tires, cooling system, and electric drive unit.
- Keep the vehicle in gear when going down steep or long hills.
- Stay in your own lane. Do not swing wide or cut across the center of the road. Drive at speeds that let you stay in your own lane.
- Top of hills: Be alert — something could be in your lane (stalled car, accident).

- Pay attention to special road signs (falling rocks area, winding roads, long grades, passing or no-passing zones) and take appropriate action.

Winter Driving

Driving on Snow or Ice
Drive carefully when there is snow or ice between the tires and the road, creating less traction or grip. Wet ice can occur at about 0°C (32°F) when freezing rain begins to fall, resulting in even less traction. Avoid driving on wet ice or in freezing rain until roads can be treated with salt or sand.

Drive with caution, whatever the condition. Accelerate gently so traction is not lost. Accelerating too quickly causes the wheels to spin and makes the surface under the tires slick, so there is even less traction.

Try not to break the fragile traction. If you accelerate too fast, the drive wheels will spin and polish the surface under the tires even more.

The Antilock Brake System (ABS) improves vehicle stability during hard stops on slippery roads, but apply the brakes sooner than when on dry pavement. See Antilock Brake System (ABS) on page 9-21.

Allow greater following distance on any slippery road and watch for slippery spots. Icy patches can occur on otherwise clear roads in shaded areas. The surface of a curve or an overpass can remain icy when the surrounding roads are clear. Avoid sudden steering maneuvers and braking while on ice.

Turn off cruise control on slippery surfaces.
Blizzard Conditions

Being stuck in snow can be a serious situation. Stay with the vehicle unless there is help nearby. If possible, use Roadside Assistance. See Roadside Assistance Program on page 13-5.

To get help and keep everyone in the vehicle safe:

- Turn on the hazard warning flashers.
- Tie a red cloth to an outside mirror.

To save energy, run the vehicle for only short periods as needed to warm the vehicle and then shut the vehicle off and close the window most of the way to save heat. Repeat this until help arrives but only when you feel really uncomfortable from the cold. Moving about to keep warm also helps.

If it takes some time for help to arrive, now and then when you run the vehicle, push the accelerator pedal slightly so the vehicle runs faster than the idle speed. This keeps the battery charged to restart the vehicle and to signal for help with the headlamps. Do this as little as possible to save electricity.

If the Vehicle Is Stuck

Slowly and cautiously spin the wheels to free the vehicle when stuck in sand, mud, ice, or snow.

If stuck too severely for the traction system to free the vehicle, turn the traction system off and use the rocking method. See Traction Control/Electronic Stability Control on page 9-25.

⚠️ Warning

If the vehicle's tires spin at high speed, they can explode, and you or others could be injured. The vehicle can overheat, causing an underhood compartment fire or (Continued)

Warning (Continued)

other damage. Spin the wheels as little as possible and avoid going above 56 km/h (35 mph).

Rocking the Vehicle to Get it Out

Turn the steering wheel left and right to clear the area around the front wheels. Turn off any traction system. Shift back and forth between R (Reverse) and a low forward gear, spinning the wheels as little as possible. To prevent electric drive unit wear, wait until the wheels stop spinning before shifting gears. Release the accelerator pedal while shifting, and press lightly on the accelerator pedal when the electric drive unit is in gear. Slowly spinning the wheels in the forward and reverse directions causes a rocking motion that could free the vehicle. If that does not get
9-10 Driving and Operating

Vehicle Load Limits

It is very important to know how much weight the vehicle can carry. This weight is called the vehicle capacity weight and includes the weight of all occupants, cargo, and all nonfactory-installed options. Two labels on the vehicle show how much weight it may properly carry: the Tire and Loading Information label and the Certification label.

⚠️ Warning

Do not load the vehicle any heavier than the Gross Vehicle Weight Rating (GVWR), or either the maximum front or rear Gross Axle Weight Rating (GAWR). This can cause systems to break and change the way the vehicle handles. This could cause loss of control and a crash. Overloading can also shorten the life of the vehicle.

Tire and Loading Information Label

A vehicle-specific Tire and Loading Information label is attached to the vehicle’s center pillar (B-pillar). The Tire and Loading Information label shows the number of occupant seating positions (1), and the maximum vehicle capacity weight (2) in kilograms and pounds.
The Tire and Loading Information label also shows the tire size of the original equipment tires (3) and the recommended cold tire inflation pressures (4). For more information on tires and inflation pressures, see Tires on page 10-26 and Tire Pressure on page 10-32.

There is also important loading information on the Certification label. It tells you the Gross Vehicle Weight Rating (GVWR) and the Gross Axle Weight Rating (GAWR) for the front and rear axle. See “Certification Label” later in this section.

“Steps for Determining Correct Load Limit”

1. Locate the statement "The combined weight of occupants and cargo should never exceed XXX kg or XXX lbs." on your vehicle’s placard.

2. Determine the combined weight of the driver and passengers that will be riding in your vehicle.

3. Subtract the combined weight of the driver and passengers from XXX kg or XXX lbs.

4. The resulting figure equals the available amount of cargo and luggage load capacity. For example, if the "XXX" amount equals 1400 lbs. and there will be five 150 lb passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lbs. (1400-750 (5 x 150) = 650 lbs.)

5. Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in Step 4.

6. If your vehicle will be towing a trailer, load from your trailer will be transferred to your vehicle. Consult this manual to determine how this reduces the available cargo and luggage load capacity of your vehicle.”

This vehicle is neither designed nor intended to tow a trailer.
9-12 Driving and Operating

Example 1
1. Vehicle Capacity Weight for Example 1 = 453 kg (1,000 lbs).
2. Subtract Occupant Weight @ 68 kg (150 lbs) × 2 = 136 kg (300 lbs).
3. Available Occupant and Cargo Weight = 317 kg (700 lbs).

Example 2
1. Vehicle Capacity Weight for Example 2 = 453 kg (1,000 lbs).
2. Subtract Occupant Weight @ 68 kg (150 lbs) × 5 = 340 kg (750 lbs).
3. Available Cargo Weight = 113 kg (250 lbs).

Example 3
1. Vehicle Capacity Weight for Example 3 = 453 kg (1,000 lbs).
2. Subtract Occupant Weight @ 91 kg (200 lbs) × 5 = 453 kg (1,000 lbs).
3. Available Cargo Weight = 0 kg (0 lbs).

Refer to the vehicle’s Tire and Loading Information label for specific information about the vehicle’s capacity weight and
seating positions. The combined weight of the driver, passengers, and cargo should never exceed the vehicle’s capacity weight.

**Certification Label**

A vehicle-specific Certification label is attached to the vehicle’s center pillar (B-pillar). The label tells the gross weight capacity of the vehicle, called the Gross Vehicle Weight Rating (GVWR). The GVWR includes the weight of the vehicle, all occupants, fuel, and cargo. Never exceed the GVWR for the vehicle, or the Gross Axle Weight Rating (GAWR) for either the front or rear axle.

And, if there is a heavy load, it should be spread out. See “Steps for Determining Correct Load Limit” earlier in this section.

**Warning**

Do not load the vehicle any heavier than the Gross Vehicle Weight Rating (GVWR), or either the maximum front or rear Gross Axle Weight Rating (GAWR). This can cause systems to break and change the way the vehicle handles. This could cause loss of control and a crash. Overloading can also shorten the life of the vehicle.

If you put things inside the vehicle — like suitcases, tools, packages, or anything else — they will go as fast as the vehicle goes. If you have to stop or turn quickly, or if there is a crash, they will keep going.

**Warning**

Things inside the vehicle can strike and injure people in a sudden stop or turn, or in a crash.

- Put things in the cargo area of the vehicle. In the cargo area, put them as far forward as possible. Try to spread the weight evenly.

(Continued)
**Warning (Continued)**

- Never stack heavier things, like suitcases, inside the vehicle so that some of them are above the tops of the seats.
- Do not leave an unsecured child restraint in the vehicle.
- Secure loose items in the vehicle.
- Do not leave a seat folded down unless needed.

**Starting and Operating**

**New Vehicle Break-In**

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Avoid making hard stops for the first 322 km (200 mi). During this time the new brake linings are not yet broken in. Hard stops with new linings can mean premature wear and earlier replacement. Following break-in, vehicle speed and load can be gradually increased.</td>
</tr>
</tbody>
</table>

**Power Button**

The vehicle has an electronic pushbutton start.

The Remote Keyless Entry (RKE) transmitter must be in the vehicle for the system to operate. If the vehicle will not start, place the RKE transmitter in the transmitter slot. See *Remote Keyless Entry (RKE) System Operation on page 2-3*.

**ON/RUN:** This position is for starting and driving. With the vehicle off, and the brake pedal applied, pressing the POWER button once
will place the vehicle in ON/RUN. When the vehicle READY light is on in the instrument cluster, the vehicle is ready to be driven. This could take up to 15 seconds at extremely cold temperatures. See Starting and Stopping the Vehicle on page 9-16.

Service Only Mode

This power mode is available for service and diagnostics, and to verify the proper operation of the malfunction indicator lamp as may be required for emission inspection purposes. With the vehicle off, and the brake pedal not applied, pressing and holding the POWER button for more than five seconds will place the vehicle in Service Only Mode. The instruments and audio systems will operate as they do in ON/RUN, but the vehicle will not be able to be driven. The propulsion system will not start in Service Only Mode. Push the button again to turn the vehicle off.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Service Only Mode will discharge the 12-volt battery. Do not use Service Only Mode for an extended period, or the vehicle may not start.</td>
</tr>
</tbody>
</table>

STOPPING THE VEHICLE/OFF:

To turn the vehicle off, push the POWER button with the vehicle in P (Park). Retained Accessory Power (RAP) will remain active until the driver door is opened. See Retained Accessory Power (RAP) on page 9-17. When turning off the vehicle, if the vehicle is not in P (Park), the vehicle will go to ACC/ACCESSORY and display the message SHIFT TO PARK in the Driver Information Center (DIC). See Electric Drive Unit Messages on page 5-33.

If the vehicle must be shut off in an emergency:

1. Brake using a firm and steady pressure. Do not pump the brakes repeatedly. This may deplete power assist, requiring increased brake pedal force.

2. Shift the vehicle to N (Neutral). This can be done while the vehicle is moving. After shifting to N (Neutral), firmly apply the brakes and steer the vehicle to a safe location.

3. Come to a complete stop, shift to P (Park), and turn the vehicle off by pushing the POWER button.

4. Set the parking brake. See Electric Parking Brake on page 9-22.
Warning

Turning off the vehicle while moving may disable the airbags. While driving, only shut the propulsion system off in an emergency.

Caution

Do not try to shift to P (Park) if the vehicle is moving or the electric drive unit could be damaged. Shift to P (Park) only when the vehicle is stopped.

Caution

If you add electrical parts or accessories, you could change the way the vehicle operates. Any resulting damage would not be covered by the vehicle warranty. See Add-On Electrical Equipment on page 9-42.

Starting and Stopping the Vehicle

Starting Procedure

Move the shift lever to P (Park) or N (Neutral). The propulsion system will not start in any other position.

If the vehicle cannot be pulled over, and must be shut off while driving, press and hold the POWER button for longer than two seconds, or press twice in five seconds.

The Remote Keyless Entry (RKE) transmitter must be in the vehicle. Press the brake pedal and push and release the POWER button.

If the RKE transmitter is not in the vehicle or something is interfering with the transmitter, a message displays in the Driver Information Center (DIC). See Key and Lock Messages on page 5-33.

If the vehicle will not start due to a low RKE transmitter battery, the vehicle can still be driven. See “Starting the Vehicle with a Low Transmitter Battery” in Remote Keyless Entry (RKE) System Operation on page 2-3.

A vehicle ready light displays in the lower right corner of the instrument cluster when the vehicle is ready to be driven.

The instrument cluster also displays an active battery gauge when the vehicle is ready to be driven.
Restarting Procedure
If the vehicle must be restarted while it is still moving, move the shift lever to N (Neutral) and press the POWER button twice without pressing the brake pedal. The propulsion system will not restart in any other position.

A chime will sound if the driver door is opened while the vehicle is in ON/RUN. Always press the POWER button to turn the vehicle off before exiting.

Stopping Procedure
For information on how to turn the vehicle off, see Power Button on page 9-14.

Retained Accessory Power (RAP)
The following features will operate for up to 10 minutes or until the driver door is opened:
- Audio System
- Accessory Power Outlets
  Power windows will operate for up to 10 minutes or until any door is opened.

Shifting Into Park
1. Hold the brake pedal down and set the parking brake. See Electric Parking Brake on page 9-22.
2. Move the shift lever into P (Park) by pushing the lever all the way toward the front of the vehicle.
3. Turn the vehicle off.

Leaving the Vehicle with the Propulsion System On

⚠️ Warning
It can be dangerous to leave the vehicle with the propulsion system running. It could overheat and catch fire.

(Continued)

Warning (Continued)
It is dangerous to get out of the vehicle if the shift lever is not fully in P (Park) with the parking brake firmly set. The vehicle can roll.

Do not leave the vehicle when the propulsion system is running. If you have left the propulsion system running, the vehicle can move suddenly. You or others could be injured. To be sure the vehicle will not move, even when you are on fairly level ground, always set the parking brake and move the shift lever to P (Park). See Shifting Into Park on page 9-17.

If you have to leave the vehicle with the propulsion system on, be sure the vehicle is in P (Park) and the parking brake is firmly set before you leave it. After you have moved the shift lever into P (Park), hold down the regular brake pedal. See if
9-18 Driving and Operating

you can move the shift lever away from P (Park) without first pulling it toward you. If you can, it means that the shift lever was not fully locked into P (Park).

Torque Lock

Torque lock is when the weight of the vehicle puts too much force on the parking pawl in the electric drive unit. This happens when parking on a hill and shifting the electric drive unit into P (Park) is not done properly and then it is difficult to shift out of P (Park). To prevent torque lock, set the parking brake and then shift into P (Park).

If torque lock does occur, your vehicle may need to be pushed uphill by another vehicle to relieve the parking pawl pressure, so you can shift out of P (Park).

Shifting out of Park

To shift out of P (Park), the vehicle must be in ON/RUN, the brake pedal must be applied, and the charge cord must be unplugged.

The vehicle has an electronic shift lock release system. The shift lock release is designed to:

- Prevent the vehicle from turning off unless the shift lever is in P (Park).
- Prevent moving the shift lever out of P (Park), unless the vehicle is in ON/RUN, the brake pedal is applied, and the charge cord is unplugged.

Packing the vehicle in extreme cold for several days without the charge cord connected may cause the electric drive unit to be locked in P (Park) until the propulsion system has warmed sufficiently.

The shift lock is always functional except in the case of an uncharged or low charged 12-volt battery (less than 9 volts).

If the vehicle has an uncharged 12-volt battery or a 12-volt battery with low voltage, try charging or jump starting the 12-volt battery. See Battery on page 10-12 or Jump Starting on page 10-55.

If the console shift lever cannot be moved out of P (Park):

1. Apply and maintain the regular brakes.
2. Turn the vehicle on using the O POWER button. See Power Button on page 9-14.
3. Let up on the shift lever and make sure the shift lever is pushed all the way into P (Park).
4. Verify that the vehicle is unplugged, and the READY light is on.
5. Press the shift lever button.
6. Move the shift lever into the desired gear.

If you still cannot move the shift lever from P (Park), see your dealer or a professional towing service.
Electric Vehicle Operating Modes

Driver Selected Operating Modes

Sport Mode

Sport Mode provides more responsive acceleration than Normal Mode, but can reduce efficiency. Use Normal Mode whenever possible. When the SPORT light is not on, the vehicle is in Normal Mode.

Press the SPORT button to select Sport Mode.
Press the SPORT button again to return to Normal Mode.
The SPORT light comes on when Sport Mode is selected. See Sport Mode Light on page 5-16.
Each time the vehicle is started, it will return to Normal Mode.
Sport Mode may be unavailable if the battery charge is too low.

Electric Drive Unit

The vehicle uses an electric drive unit.

P (Park): This position locks the front wheels. It is the best position to use when starting the propulsion system because the vehicle cannot move easily.
9-20 Driving and Operating

⚠️ Warning

It is dangerous to get out of the vehicle if the shift lever is not fully in P (Park) with the parking brake firmly set. The vehicle can roll.

Do not leave the vehicle when the propulsion system is running. If you have left the propulsion system running, the vehicle can move suddenly. You or others could be injured. To be sure the vehicle will not move, even when you are on fairly level ground, always set the parking brake and move the shift lever to P (Park). See Shifting Into Park on page 9-17.

Make sure the shift lever is fully in P (Park) before starting the propulsion system. The vehicle has an electric drive unit shift lock control system. The regular brake must be fully applied first and then the shift lever button pressed before shifting from P (Park) when the vehicle is in ON/RUN. If you cannot shift out of P (Park), ease pressure on the shift lever, then push the shift lever all the way into P (Park) as you maintain brake application. Then press the shift lever button and move the shift lever into another gear. See Shifting out of Park on page 9-18.

R (Reverse): Use this gear to back up.

⚠️ Caution

Shifting to R (Reverse) while the vehicle is moving forward could damage the electric drive unit. The repairs would not be covered by the vehicle warranty. Shift to R (Reverse) only after the vehicle is stopped.

To rock the vehicle back and forth to get out of snow, ice, or sand without damaging the electric drive unit, see If the Vehicle Is Stuck on page 9-9.

N (Neutral): In this position, the propulsion system does not provide torque to the wheels.

D (Drive): This position is for normal driving. If more power is needed for passing, and the vehicle is:

- Going less than 56 km/h (35 mph), push the accelerator pedal about halfway down.
- Going about 56 km/h (35 mph) or more, push the accelerator all the way down.

⚠️ Caution

If the vehicle seems to accelerate slowly or not respond when you go faster, and you continue to drive the vehicle that way, you could damage the electric drive unit. Have the vehicle serviced right away.
L (Low): This position reduces vehicle speed without using the brakes. The brake lights will come on when the vehicle is in L (Low) and the accelerator pedal is not being pressed to indicate the vehicle is slowing down. You can use L (Low) on hills. It can help control vehicle speed going down steep mountain roads along with using the brakes off and on. You can use L (Low) on very steep hills, in deep snow, or in mud.

**Caution**

Spinning the tires or holding the vehicle in one place on a hill using only the accelerator pedal may damage the electric drive unit. The repair will not be covered by the vehicle warranty. If you are stuck, do not spin the tires. When stopping on a hill, use the brakes to hold the vehicle in place.

**Brakes**

**Antilock Brake System (ABS)**

This vehicle has ABS, an advanced electronic braking system that helps prevent a braking skid.

When the vehicle begins to drive away, ABS checks itself. A momentary motor or clicking noise might be heard while this test is going on, and it might even be noticed that the brake pedal moves a little. This is normal.

If there is a problem with ABS, this warning light stays on. See *Antilock Brake System (ABS) Warning Light* on page 5-15.

If driving safely on a wet road and it becomes necessary to slam on the brakes and continue braking to avoid a sudden obstacle, a computer senses that the wheels are slowing down. If one of the wheels is about to stop rolling, the computer will separately work the brakes at each wheel.

ABS can change the brake pressure to each wheel, as required, faster than any driver could. This can help you steer around the obstacle while braking hard.

As the brakes are applied, the computer keeps receiving updates on wheel speed and controls braking pressure accordingly.

Remember: ABS does not change the time needed to get a foot up to the brake pedal or always decrease stopping distance. If you get too close to the vehicle in front of you, there will not be enough time to apply the brakes if that vehicle...
9-22 Driving and Operating

suddenly slows or stops. Always leave enough room up ahead to stop, even with ABS.

Using ABS
Do not pump the brakes. Just hold the brake pedal down firmly and let ABS work. You might hear the ABS pump or motor operating and feel the brake pedal pulsate, but this is normal.

Braking in Emergencies
ABS allows you to steer and brake at the same time. In many emergencies, steering can help more than even the very best braking.

Electric Parking Brake
The vehicle has an Electric Parking Brake (EPB). The (P) switch is on the center console. The EPB can always be activated, even if the vehicle is off. To prevent draining the 12-volt battery, avoid repeated cycles of the EPB system when the vehicle is off.

In case of insufficient electrical power, the EPB cannot be applied or released.

Before leaving the vehicle, check the Electric Parking Brake Light to ensure the parking brake is applied.

EPB Apply
The EPB can be applied anytime the vehicle is stopped. The EPB is applied by momentarily lifting up on the (P) switch with the brake pedal applied. Once fully applied, the Electric Parking Brake light will be on. While the brake is being applied, the Electric Parking Brake light will flash until full apply is reached. If the light does not come on, or remains flashing, have the vehicle serviced. Do not drive the vehicle if the Electric Parking Brake light is flashing. See your dealer.

If the EPB is applied while the vehicle is in motion, a chime will sound, and the DIC message RELEASE PARKING BRAKE will be displayed. The vehicle will decelerate as long as the switch is held in the up position. Releasing the (P) switch during deceleration
will release the parking brake. If the
switch is held in the up position
until the vehicle comes to a stop,
the EPB will remain applied.

If the Electric Parking Brake light
flashes continuously, the EPB is
only partially applied or released,
or there is a problem with the EPB.
The DIC message SERVICE
PARKING BRAKE will be displayed.
If this light flashes continuously,
release the EPB, and attempt to
apply it again. If this light continues
to flash, do not drive the vehicle.
See your dealer.

If the Service Electric Parking Brake
light is on, the EPB has detected a
system problem and is operating
with reduced functionality. To apply
the EPB when this light is on, lift up
on the \( \mathbb{P} \) switch and hold it in the
up position. Full application of the
parking brake by the EPB system
may take a longer period of time
than normal when this light is on.
Continue to hold the \( \mathbb{P} \) switch until
the Electric Parking Brake light
remains on. If the Service Electric
Parking Brake light is on, see your
dealer.

If the EPB fails to apply, the rear
wheels should be blocked to
prevent vehicle movement.

For maximum EPB force when
parking on a hill, pull the EPB
switch twice.

The vehicle may automatically apply
the EPB in some situations when
the vehicle is not moving. This is
normal, and is done to periodically
check the correct operation of the
EPB system.

**EPB Release**

To release the EPB, place the
vehicle in ON/RUN, apply and hold
the brake pedal, and push down
momentarily on the \( \mathbb{P} \) switch.
If attempting to release the EPB
without the brake pedal applied, a
chime will sound, and the DIC
message STEP ON BRAKE TO
RELEASE PARK BRAKE will be
displayed. The EPB is released
when the Electric Parking Brake
light is off.

If the Service Electric Parking Brake
light is on, the EPB has detected a
system problem, and is operating
with reduced functionality. To
release the EPB when this light is
on, push down on the \( \mathbb{P} \) switch
and hold it in the down position.
EPB release may take a longer
period of time than normal when this
light is on. Continue to hold the \( \mathbb{P} \) switch until the Electric Parking
Brake Light is off. If the light is on,
see your dealer.

{**Caution**

Driving with the parking brake on
can overheat the brake system
and cause premature wear or
damage to brake system parts.
Make sure that the parking brake
is fully released and the brake
system warning light is off before
driving.
9-24 Driving and Operating

Automatic EPB Release

The EPB will automatically release if the vehicle is running, placed into gear, and an attempt is made to drive away. Avoid rapid acceleration when the EPB is applied, to preserve parking brake lining life.

Brake Assist

This vehicle has a brake assist feature designed to assist the driver in stopping or decreasing vehicle speed in emergency driving conditions. This feature automatically uses the stability system hydraulic brake control module to supplement the power brake system under conditions where the driver has quickly and forcefully applied the brake pedal in an attempt to quickly stop or slow down the vehicle. The stability system hydraulic brake control module increases brake pressure at each corner of the vehicle until the ABS activates. Minor brake pedal pulsation or pedal movement during this time is normal and the driver should continue to apply the brake pedal as the driving situation dictates. The brake assist feature will automatically disengage when the brake pedal is released or brake pedal pressure is quickly decreased.

Hill Start Assist (HSA)

This vehicle has an HSA feature, which may be useful when the vehicle is stopped on a grade. This feature is designed to prevent the vehicle from rolling, either forward or rearward, during vehicle drive off. After the driver completely stops and holds the vehicle in a complete standstill on a grade, HSA will be automatically activated. During the transition period between when the driver releases the brake pedal and starts to accelerate to drive off on a grade, HSA holds the braking pressure for a maximum of two seconds to ensure that there is no rolling. The brakes will automatically release when the accelerator pedal is applied within the two-second window. It will not activate if the vehicle is in a drive gear and facing downhill, or if the vehicle is facing uphill and in R (Reverse).

Regenerative Braking

Regenerative braking takes some of the energy from the moving vehicle and turns it back into electrical energy. This energy is then stored back into the high voltage battery system, contributing to increased energy efficiency.

The hydraulic disc brakes work with the regenerative braking to ensure effective braking, such as when a high braking demand is requested.

The braking system is computer controlled and blends the regenerative braking with the
conventional hydraulic disc brakes to meet any requirements for deceleration. The controller interprets the braking request and uses regenerative braking, conventional hydraulic braking, or a combination of both as necessary. Because the controller applies the hydraulic brakes through its high pressure accumulator, you may occasionally hear the motor-driven pump when it recharges the system. This is normal.

See Warning Lights, Gauges, and Indicators on page 5-6 and Driver Information Center (DIC) on page 5-29. In the event of a controller problem, the brake pedal may be harder to push and the stopping distance may be longer.

Ride Control Systems

Traction Control/ Electronic Stability Control

System Operation

The vehicle has a Traction Control System (TCS) and StabiliTrak®, an electronic stability control system. These systems help limit wheel slip and assist the driver in maintaining control, especially on slippery road conditions.

TCS activates if it senses that any of the drive wheels are spinning or beginning to lose traction. When this happens, TCS applies the brakes to the spinning wheels and reduces propulsion system power to limit wheel spin.

StabiliTrak activates when the vehicle senses a difference between the intended path and the direction the vehicle is actually traveling.

If cruise control is being used and traction control or StabiliTrak begins to limit wheel spin, cruise control will disengage. Cruise control may be turned back on when road conditions allow.

Both systems come on automatically when the vehicle is started and begins to move. The systems may be heard or felt while they are operating or while performing diagnostic checks. This is normal and does not mean there is a problem with the vehicle.

It is recommended to leave both systems on for normal driving conditions, but it may be necessary to turn TCS off if the vehicle gets stuck in sand, mud, ice, or snow. See If the Vehicle Is Stuck on page 9-9 and “Turning the Systems Off and On” later in this section.
9-26 Driving and Operating

The indicator light for both systems is in the instrument cluster. This light will:

- Flash when TCS is limiting wheel spin.
- Flash when StabiliTrak is activated.
- Turn on and stay on when either system is not working.

If either system fails to turn on or to activate, a message displays in the Driver Information Center (DIC), and comes on and stays on to indicate that the system is inactive and is not assisting the driver in maintaining control. The vehicle is safe to drive, but driving should be adjusted accordingly.

If comes on and stays on:
1. Stop the vehicle.
2. Turn the vehicle off and wait 15 seconds.
3. Start the vehicle.

Drive the vehicle. If comes on and stays on, the vehicle may need more time to diagnose the problem. If the condition persists, see your dealer.

Turning the Systems Off and On

To turn off only TCS, press and release the button. The traction off light displays in the instrument cluster, and the appropriate message is displayed in the DIC. See Ride Control System Messages on page 5-34.

To turn TCS on again, press and release the button. The traction off light displayed in the instrument cluster will turn off.

The button for TCS and StabiliTrak is on the center console behind the shift lever.

Caution
Do not repeatedly brake or accelerate heavily when TCS is off. The vehicle driveline could be damaged.

To turn off only TCS, press and release the button. The traction off light displays in the instrument cluster, and the appropriate message is displayed in the DIC. See Ride Control System Messages on page 5-34.

To turn TCS on again, press and release the button. The traction off light displayed in the instrument cluster will turn off.
If TCS is limiting wheel spin when the button is pressed, the system will not turn off until the wheels stop spinning.

To turn off both TCS and StabiliTrak, press and hold the button until the traction off light and StabiliTrak OFF light come on and stay on in the instrument cluster. The appropriate messages are displayed in the DIC. See Ride Control System Messages on page 5-34.

To turn TCS and StabiliTrak on again, press and release the button. The traction off light and StabiliTrak OFF light in the instrument cluster turn off.

Adding accessories can affect the vehicle performance. See Accessories and Modifications on page 10-2.

Cruise Control

If equipped with cruise control, the vehicle can maintain a speed of about 40 km/h (25 mph) or more without keeping your foot on the accelerator. Cruise control does not work at speeds below 40 km/h (25 mph).

If the brakes are applied, the cruise control disengages.

If the vehicle's Traction Control System (TCS) begins to limit wheel spin while using cruise control, the cruise control will automatically disengage. See Traction Control/ Electronic Stability Control on page 9-25. When road conditions allow you to safely use it again, the cruise control can be turned back on.

⚠️ Warning

Cruise control can be dangerous where you cannot drive safely at a steady speed. Do not use the cruise control on winding roads or in heavy traffic.

Cruise control can be dangerous on slippery roads. On such roads, fast changes in tire traction can cause excessive wheel slip, and you could lose control. Do not use cruise control on slippery roads.
9-28 Driving and Operating

(On/Off): Press to turn the cruise control system on and off. A white cruise control indicator light turns on when in use.

RES/+ (Resume/Accelerate): Press briefly to make the vehicle resume to a previously set speed, or press and hold to accelerate. If cruise control is already active, use to increase vehicle speed.

SET/- (Set/Coast): Press briefly to set the speed and activate cruise control. If cruise control is already active, use to decrease vehicle speed.

( Cancel): Press to disengage cruise control without erasing the set speed from memory.

**Setting Cruise Control**

If the cruise button is on when not in use, it could get bumped and go into cruise when not desired. Keep the cruise control button off when cruise is not being used.

The cruise control light on the instrument panel cluster turns green after the cruise control has been set to the desired speed.

1. Press (On/Off).
2. Get up to the desired speed.
3. Press and release the SET/- button.
4. Remove foot from the accelerator.

**Resuming a Set Speed**

If the cruise control is set at a desired speed and then the brakes are applied, the cruise control is disengaged without erasing the set speed from memory.

Once the vehicle speed is 40 km/h (25 mph) or greater, press the RES/+ button briefly. The vehicle returns to the previous set speed and stays there.

**Increasing Speed While Using Cruise Control**

If the cruise control system is already activated:

- Press and hold the RES/+ button until the desired speed is reached, then release it.
- To increase vehicle speed in small increments, briefly press the RES/+ button. Each time this is done, the vehicle goes about 1.6 km/h (1 mph) faster.
Reducing Speed While Using Cruise Control
If the cruise control system is already activated:

- Press and hold the SET/− until the lower desired speed is reached, then release it.
- To slow down in small increments, briefly press the SET/− button. Each time this is done, the vehicle goes about 1.6 km/h (1 mph) slower.

Passing Another Vehicle While Using Cruise Control
Use the accelerator pedal to increase the vehicle speed. When you take your foot off the pedal, the vehicle will slow down to the previous set cruise speed. While pressing the accelerator pedal or shortly following the release to override cruise control, briefly pressing the SET/− button will result in cruise control set to the current vehicle speed.

Using Cruise Control on Hills
How well cruise control works on hills depends on the vehicle speed, load, and the steepness of the hills. When going up steep hills, you might have to step on the accelerator pedal to maintain the vehicle speed. When going downhill, you might have to brake or shift to a lower gear to maintain the vehicle speed. When the brakes are applied, cruise control is disengaged.

Ending Cruise Control
There are three ways to end cruise control:

- Step lightly on the brake pedal.
- Press 🚑.
- To turn off the cruise control, press 🚑.

Erasing Speed Memory
The cruise control set speed is erased from memory by pressing 🚑 or if the vehicle is turned off.

Driver Assistance Systems
Rear Vision Camera (RVC)
The vehicle may have an RVC system. Read this entire section before using it.
The RVC system can assist the driver when backing up by displaying a view of the area behind the vehicle.

⚠️ Warning
The RVC system does not display children, pedestrians, bicyclists, animals, or any other object located outside the camera's field of view, below the bumper, or under the vehicle. Perceived distances may be different from actual distances. Do not back the vehicle using only the RVC.
Warning (Continued)

- screen, during longer, higher speed backing maneuvers, or where there could be cross traffic. Failure to use proper care before backing may result in injury, death, or vehicle damage. Always check behind and around the vehicle before backing.

Guidelines
The RVC system has a guideline overlay that can help the driver align the vehicle when backing into a parking spot.

To turn the guidelines on or off:
1. Shift into P (Park).
2. Select Settings on the infotainment system home page.
4. Select Rear Camera Option.
5. Select Guidelines and select On or Off.

Rear Vision Camera Error Messages
SERVICE REAR VISION SYSTEM: If this message appears in the center stack display, the system may need service.

If any other problem occurs or if a problem persists, see your dealer.

How the System Works
When the vehicle is shifted into R (Reverse), the image of the area behind the vehicle appears in the radio screen. The previous screen displays when the vehicle is shifted out of R (Reverse) after approximately two seconds.

To return to the previous screen sooner, do one of the following:
- Press a button on the infotainment system.
- Shift into P (Park).

Rear Vision Camera Location
The RVC is above the license plate. The area displayed by the camera is limited.

It does not display objects that are close to either corner or under the bumper and can vary depending on vehicle orientation or road conditions. Displayed images may be farther or closer than they appear.

The following illustrations show the field of view that the camera provides.
When the System Does Not Seem To Work Properly

The RVC system may not work properly or display a clear image if:

- It is dark.
- The sun or the beam of headlamps is shining directly into the camera lens.
- Ice, snow, mud, or anything else has built up on the camera lens. Clean the lens, rinse it with water, and wipe it with a soft cloth.
- The back of the vehicle was in an accident. The position and mounting angle of the camera can change or the camera can be affected. Be sure to have the camera and its position and mounting angle checked at your dealer.

Charging

When to Charge

When the high voltage battery is getting low, charging messages may display.

The CHARGE SOON message indicates that the driving range is getting low and the vehicle needs to be charged soon. As the charge level drops, the PROPULSION POWER IS REDUCED message comes on at the same time that the accelerator pedal response is reduced. When the energy is depleted, the OUT OF ENERGY, CHARGE VEHICLE NOW message is displayed and the vehicle slows to a stop. Brake and steering assist will still operate.

See Battery and Charging Messages on page 5-31 and Propulsion Power Messages on page 5-34.
9-32 Driving and Operating

Plug-In Charging

This section explains the process for charging the high voltage battery. Do not allow the vehicle to remain in temperature extremes for long periods without being driven or plugged in. It is recommended that the vehicle be plugged in when temperatures are below 0°C (32°F) and above 32°C (90°F) to maximize high voltage battery life.

In order to maintain maximum range from the battery, fully charge the battery at each charge event. It is not recommended to partially charge the battery.

When using a 240-volt charging station, it will take approximately seven hours to charge the vehicle from empty to full. When using a 120-volt AC electrical outlet, it will take approximately 20 hours to charge the vehicle with the 12 amp AC current setting, and considerably longer using the default 8 amp AC current setting. Charge times will vary with outside temperature.

There are three ways to program how the vehicle is charged. See Programmable Charging on page 5-20.

If equipped, the vehicle can be charged using DC charging equipment found at service stations and other public locations.

When using a DC charging station with at least 50kW of available power, it will take approximately 20 minutes to recharge from a depleted battery to a level of 80% of the driving range available for use. This time estimate is applicable to nominal temperature ranges. In extreme hot or cold conditions, this time may be lengthened. When a full charge is desired, the charging time will be increased.

The charging system may run fans and pumps that result in sounds from the vehicle while it is turned off. Additional unexpected clicking sounds may be caused by the electrical devices used while charging.

While the charge cord is plugged into the vehicle, the vehicle cannot be driven.

AC Charging

AC Charge Cord Vehicle Plug

Start Charge
1. Make sure the vehicle is parked and turned off.
2. Push \( \text{charge port door} \) and release to open the door.

   In cold weather conditions, ice may form around the charge port door. The charge port door may not open on the first attempt. Remove ice from the area and repeat attempting to open the charge port door.

3. Open the rear hatch, lift the load support floor covering, and remove the charge cord. It is located near the tire sealant and compressor kit. Pull up on the charge cord handle to release it from the handle clip. Lift the charge cord up and rearward to remove it from the vehicle. The vehicle plug is stored as shown.

4. Plug the charge cord into the electrical outlet. See Electric Requirements for Battery Charging on page 9-41. Verify the charge cord status. See the charge cord user guide and Charge Cord on page 9-40.

   Select the appropriate charge level using the Change Charge Level setting on the center stack. See Programmable Charging on page 5-20.

5. Plug in the AC vehicle plug of the charge cord into the charge port on the vehicle. Make sure
9-34 Driving and Operating

the AC vehicle plug is fully connected to the AC charge port. If it is not properly seated, the charge may not occur.

6. Verify that the Charging Status Indicator illuminates on top of the instrument panel and a horn chirp occurs. See Charging Status Feedback on page 9-36.

End Charge

1. Unlock the vehicle with the RKE transmitter to disarm the charge cord theft alert.
2. Unplug the vehicle plug of the charge cord from the vehicle. Unlock the vehicle plug of the charge cord from the vehicle by pushing the button on the top of the charge cord plug.
3. Close the charge port door by pressing firmly in the center to latch properly.
4. Unplug the charge cord from the electrical outlet.

5. Place the charge cord into the storage compartment.

DC Charging

AC/DC Charge Cord Vehicle Plug (If Equipped)

Start Charge

1. Make sure the vehicle is parked and turned off.
2. Push \[ \text{on the charge port door and release to open the door.} \]
   
   In cold weather conditions, ice may form around the charge port door. The charge port door may not open on the first attempt.
   
   Remove ice from the area and repeat attempting to open the charge port door.

3. Unlatch the DC charging dust cover and lower it fully.
4. Plug in the DC vehicle plug into the DC charge port on the vehicle. Make sure that the DC vehicle plug is fully connected to the DC charge port. If it is not properly seated then the charge may not occur.
5. Follow the steps listed on the charging station to start charging. The electric parking brake will automatically apply once the charge process has been started.

6. Once charging, the DC vehicle plug will be locked to the DC charge port and cannot be disconnected while charging is active.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not attempt to disconnect the DC vehicle plug while charging is active. This action may damage vehicle or charging station hardware.</td>
</tr>
</tbody>
</table>

Stop Charge
Controls on the charging station can be used to stop the charge process at any time.

To stop charging, the stop charge button on the RKE transmitter may also be used. This applies only to DC charging.

Additionally, to stop the charge when inside the vehicle, you may use the stop charging button on the Battery Information Screen.

**Stop Charge — Automatic**

When the vehicle no longer needs to use power from the charging station, it will stop charging and the DC vehicle plug will be unlocked from the DC charge port.

Energy can still be consumed from the charging station when the vehicle’s displays and indicators show that the battery is fully charged. This is to ensure the battery is in optimal temperature operating range to maximize vehicle range. See *Programmable Charging on page 5-20.*

The process can be stopped by using the procedure to stop charging manually.

**End Charge**

1. Wait until the charging process has been fully stopped and the Charging Status Indicator is no longer solid green.

2. Unplug the vehicle plug of the charge cord from the vehicle.

3. Close the DC charging dust cover.

You can confirm the charge cord is connected by looking at the DIC.

4. Close the charge port door by pressing firmly to latch properly.

5. The electric parking brake must be manually disengaged before driving the vehicle.

6. To start another DC charge, remove the DC vehicle plug and reconnect.
9-36 Driving and Operating

DC Charging Station Hardware
Typically, DC charging stations will be found in public locations and are not planned for residential home use.

The vehicle is designed to take full advantage of a 55kW DC charger to obtain optimal charging times. When the vehicle is connected to a charger larger than 55kW, the vehicle will not charge any quicker.

The DC vehicle plug is relatively large and can cause damage to personal property if not used correctly. Use caution when connecting to the DC charge port.

Follow the steps listed on the charging station to perform a DC vehicle charge.

Delayed Charging Override
To temporarily override a delayed charge event, unplug the charge cord from the charge port and then plug it back in within five seconds. A single horn chirp will sound and charging will begin immediately.

To cancel a temporary override, unplug the charge cord, wait for 10 seconds, and then plug the charge cord back in. A double horn chirp will sound and charging will be delayed.

See Programmable Charging Modes on page 5-20 for advanced charge scheduling options.

Charging Status Feedback
The vehicle has a Charging Status Indicator (CSI) at the center of the instrument panel near the windshield. When the vehicle is plugged in and the vehicle power is off, the CSI indicates the following:

- Solid Green – Vehicle is plugged in. Battery is not fully charged.
- Battery is charging.
• Slow Flashing Green – Vehicle is plugged in. Battery is not fully charged. Battery charging is delayed.

• Fast Flashing Green – Vehicle is plugged in. Battery is fully charged.

• Solid Yellow – Vehicle is plugged in. It is normal for the CSI to turn yellow for a few seconds after plugging in a compatible charge cord. The solid yellow may be extended depending on the vehicle and if there is a total utility interruption via OnStar. See Utility Interruption of Charging on page 9-41. This may also indicate that the charging system has detected a fault and will not charge the battery. See “Charge Cord Status Indicators” in the charge cord user guide.

The system may be thermally conditioning the battery during any of the states above, requiring electrical energy to be transferred to the vehicle.

If the vehicle is plugged in and vehicle power is on, the CSI will be on solid green. The same is true during a remote start if the vehicle is plugged in.

If the vehicle is plugged in and the CSI is off, a total utility interruption using OnStar or a charging fault has been detected. See Utility Interruption of Charging on page 9-41 or “Charge Cord Status Indicators” in the charge cord user guide.

This chart indicates vehicle feedback when the charge cord is plugged in.

9-40 Driving and Operating

* - Does not apply to DC charging.

**Charge Cord**

A portable charge cord used to charge the vehicle high voltage battery is stored under the rear luggage compartment.

**Important Information About Portable Electric Vehicle Charging**

- Charging an electric vehicle can stress a building’s electrical system more than a typical household appliance.
- Before you plug in to any electrical outlet, have a qualified electrician inspect and verify the electrical system (electrical outlet, wiring, junctions, and protection devices) for heavy-duty service at a 12 amp continuous load.
- Electrical outlets may wear out with normal usage or be damaged over time, making them unsuitable for electric vehicle charging.
- Check the electrical outlet/plug while charging and discontinue use if the electrical outlet/plug is hot, then have the electrical outlet serviced by a qualified electrician.
- When outdoors, plug into an electrical outlet that is weather-proof while in use.
- Mount the charging cord to reduce strain on the electrical outlet/plug.

**Warning (Continued)**

- Do not use extension cords, multi-outlet power strips, splitters, grounding adaptors, surge protectors, or similar devices.
- Do not use an electrical outlet that is worn or damaged, or one that will not hold the plug firmly in place.
- Do not use an electrical outlet that is not properly grounded.
- Do not use an electrical outlet that is on a circuit with other electrical loads.

See the charge cord user guide.

**Charge Cord Status Indicators**

See “Charge Cord Status Indicators” in the charge cord user guide.
Charge Level Selection
Charge level selection can be made using the Change Charge Level setting on the center stack. See Programmable Charging on page 5-20.

⚠️ Warning
Using a charge level that exceeds the electrical circuit or electrical outlet capacity may start a fire or damage the electrical circuit. Use the lowest charge level until a qualified electrician inspects your electrical circuit capacity. Use the lowest charge level if the electrical circuit or electrical outlet capacity is not known.

Utility Interruption of Charging
For participating customers using AC charging, this vehicle will respond to remote requests via OnStar to limit or completely block electrical power grid usage for brief time periods. A utility interruption of charging may increase AC vehicle charge times, but will not affect DC charge times.

When electrical grid power is completely blocked, the vehicle will delay charging until the utility interruption has expired. The vehicle should be left plugged in so that, when the utility interruption expires, the vehicle can automatically begin charging.

Changing the charge mode to Immediate or performing a delayed charging override will not disable a utility interruption.

A pop-up will appear in the center stack display during the key cycle following any utility interruption. See Programmable Charging on page 5-20.

Text will be displayed on the instrument cluster indicating that a utility interruption has occurred. See Instrument Cluster on page 5-7.

Electrical Requirements for Battery Charging
This vehicle is capable of being charged with most standard vehicle charging equipment complying to one or more of the following:

- SAE J1772
- SAE J2847-2
- IEC 61851-1
- IEC 61851-22
- IEC 61851-23
- IEC 61851-24
- IEC 62196-1
- IEC 62196-2
- IEC 62196-3
- ISO 15118

The following are the minimum requirements for circuits used to charge this vehicle:

- 120 volts/15 amps
- 240 volts/20 amps
Charging equipment with a rating of at least 240 volts/20 amps will provide the fastest charging time and best charging efficiency to recharge the high voltage battery. 240 volt/40 amp circuits provide flexibility for future vehicle charging needs. Always follow the charging equipment installation instructions. Contact your dealer for more information.

**Caution**

Do not use portable or stationary backup generating equipment to charge the vehicle. This may cause damage to the vehicle's charging system. Only charge the vehicle from utility supplied power.

### Trailer Towing

#### General Towing Information

The vehicle is neither designed nor intended to tow a trailer.

### Conversions and Add-Ons

#### Add-On Electrical Equipment

**Caution**

Some electrical equipment can damage the vehicle or cause components to not work and would not be covered by the warranty. Always check with your dealer before adding electrical equipment.

Add-on equipment can drain the vehicle's 12-volt battery, even if the vehicle is not operating.
When adding electrical equipment, it should only be connected using the accessory power outlets. The maximum power that can be supplied by one accessory power outlet or spread across all three is 200 watts or 15 amps. Exceeding 200 watts or 15 amps may cause erratic vehicle operation. See Power Outlets on page 5-5.

The vehicle has an airbag system. Before attempting to add anything electrical to the vehicle, see Servicing the Airbag-Equipped Vehicle on page 3-27 and Adding Equipment to the Airbag-Equipped Vehicle on page 3-27.

General Information

For service and parts needs, visit your dealer. You will receive genuine GM parts and GM-trained and supported service people.

Genuine GM parts have one of these marks:

![ACDelco](https://example.com/acdelco)

![Genuine GM Parts](https://example.com/gmparts)

![GM Accessories](https://example.com/gmaccessories)

California Proposition 65 Warning

Most motor vehicles, including this one, contain and/or emit chemicals known to the State of California to cause cancer and birth defects or other reproductive harm. Engine exhaust, many parts and systems, many fluids, and some component wear by-products contain and/or emit these chemicals.

California Perchlorate Materials Requirements

Certain types of automotive applications, such as airbag initiators, safety belt pretensioners, and lithium batteries contained in Remote Keyless Entry transmitters, may contain perchlorate materials. Special handling may be necessary. For additional information, see [www.dtsc.ca.gov/hazardouswaste/perchlorate](http://www.dtsc.ca.gov/hazardouswaste/perchlorate).

Accessories and Modifications

Adding non-dealer accessories or making modifications to the vehicle can affect vehicle performance and safety, including such things as airbags, braking, stability, ride and...
Vehicle Checks

Doing Your Own Service Work

⚠️ Warning

Never try to do your own service on high voltage battery components. You can be injured and the vehicle can be damaged if you try to do your own service work. Service and repair of these high voltage battery components should only be performed by a trained dealer technician with the proper knowledge and tools.

Exposure to high voltage can cause shock, burns, and even death. The high voltage components in the vehicle can only be serviced by technicians with special training.

(Continued)

⚠️ Warning

High voltage components are identified by labels. Do not remove, open, take apart, or modify these components. High voltage cable or wiring has orange covering. Do not probe, tamper with, cut, or modify high voltage cable or wiring.

⚠️ Warning

It can be dangerous to work on your vehicle if you do not have the proper knowledge, service manual, tools, or parts. Always follow owner manual procedures and consult the service manual for your vehicle before doing any service work.

(Continued)

If doing some of your own service work, use the proper service manual. It tells you much more.
10-4 Vehicle Care

about how to service the vehicle than this manual can. To order the proper service manual, see Service Publications Ordering Information on page 13-11.

This vehicle has an airbag system. Before attempting to do your own service work, see Airbag System Check on page 3-28.

Keep a record with all parts receipts and list the mileage and the date of any service work performed. See Maintenance Records on page 11-10.

⚠️ Caution

Even small amounts of contamination can cause damage to vehicle systems. Do not allow contaminants to contact the fluids, reservoir caps, or dipsticks.

Hood

To open the hood:

1. Pull the hood release handle inside the vehicle. It is on the lower left side of the instrument panel.

2. Go to the front of the vehicle and push the secondary hood release lever up.
Vehicle Care 10-5

3. Lift the hood and release the hood prop from the prop retainer, which is under the hood.

4. Securely place the hood prop into the hood prop holder, at the rear passenger side of the underhood compartment.

To close the hood:

1. Before closing the hood, be sure all filler caps are on properly. Then, lift the hood to relieve pressure on the hood prop. Remove the hood prop from the prop holder in the rear passenger side of the underhood compartment and secure it to the retainer on the underside of the hood. The prop rod must click into place when returning it to the retainer to prevent hood damage.

2. Lower the hood 30 cm (12 in) above the vehicle and release it so it fully latches. Check to make sure the hood is closed and repeat the process if necessary.
10-6 Vehicle Care

Underhood Compartment Overview
Vehicle Care 10-7

2. High Voltage Battery Coolant Reservoir. See Cooling System following.

3. Traction Power Inverter Module (TPIM), Accessory Power Module (APM), and Charger Module (Under Cover).

5. Brake Fluid Reservoir. See Brakes on page 10-10.

6. TPIM, APM, and Charger Module Coolant Reservoir. See Cooling System following.

8. Battery on page 10-12.

Cooling System (High Voltage Battery)

During vehicle operation and also during charging, the high voltage battery cells in the vehicle are kept within a normal operating temperature range. If the temperature rises above this temperature, the battery cooling system turns on the air conditioning compressor and cools the coolant until the correct temperature is reached. If the temperature falls below this temperature, a high voltage heater, located in the battery, heats the coolant until the correct temperature is reached.

The high voltage battery cooling system reservoir has a tamper resistant cap. The high voltage battery coolant should only be serviced by a qualified technician.

The coolant needs to be replaced at the appropriate interval. See Maintenance Schedule on page 11-2.

Checking Coolant

The vehicle must be on a level surface when checking the coolant level.

The high voltage battery coolant reservoir is in the underhood compartment. See Underhood Compartment Overview on page 10-6.

Check to see if coolant is visible in the high voltage battery coolant reservoir. If coolant is visible but the
coolant level is below the cold fill line, there could be a leak in the cooling system.

**Cooling System (TPIM, APM, and Charger Modules)**

The Traction Power Inverter Module (TPIM), Accessory Power Module (APM), and Charger module are cooled using a separate coolant loop.

The TPIM, APM, and charger modules in the vehicle are kept below a maximum temperature. If the temperature rises above this temperature, the electric cooling fan will turn on and cool the coolant until the correct temperature is reached.

**What to Use**

The TPIM, APM, and charger module coolant reservoir in the vehicle is filled with a 50/50 mixture of DEX-COOL coolant and deionized water. If using this mixture, nothing else needs to be added.

The coolant needs to be replaced at the appropriate interval. See Maintenance Schedule on page 11-2.

**Checking Coolant**

The vehicle must be on a level surface when checking the coolant level.

The TPIM, APM, and charger module coolant reservoir is in the underhood compartment. See Underhood Compartment Overview on page 10-6.

Check to see if coolant is visible in the TPIM, APM, and charger module coolant reservoir. If coolant is visible but the coolant level is below the cold fill line, there could be a leak in the cooling system.

The TPIM, APM, and charger module coolant should only be serviced by a qualified technician.
Cabin Heating Coolant System

Cabin heating uses a separate coolant system.

When cabin heating is requested, the heater and heater coolant pump are turned on to circulate warm coolant through the heater core.

What to Use

The heater coolant reservoir in the vehicle is filled with a 50/50 mixture of DEX-COOL coolant and deionized water. If using this mixture, nothing else needs to be added.

The coolant needs to be replaced at the appropriate interval. See Maintenance Schedule on page 11-2.

Checking Coolant

The vehicle must be on a level surface when checking the coolant level.

The heater coolant reservoir is in the underhood compartment. See Underhood Compartment Overview on page 10-6.

1. TPIM, APM, and Charger Module Coolant Reservoir
2. Heater Coolant Reservoir

Check to see if coolant is visible in the heater coolant reservoir. If coolant is visible but the coolant level is below the cold fill line, there could be a leak in the system.

The heater coolant should only be serviced by a qualified technician.

Washer Fluid

What to Use

When windshield washer fluid is needed, be sure to read the manufacturer’s instructions before use. If operating the vehicle in an area where the temperature may fall below freezing, use a fluid that has sufficient protection against freezing.

Adding Washer Fluid

Open the cap with the washer symbol on it. Add washer fluid until the tank is full. See Underhood Compartment Overview on page 10-6 for reservoir location.
10-10 Vehicle Care

**Caution**

- Do not use engine coolant (antifreeze) in the windshield washer. It can damage the windshield washer system and paint.
- Do not mix water with ready-to-use washer fluid. Water can cause the solution to freeze and damage the washer fluid tank and other parts of the washer system.
- When using concentrated washer fluid, follow the manufacturer instructions for adding water.
- Fill the washer fluid tank only three-quarters full when it is very cold. This allows for fluid expansion if freezing occurs, which could damage the tank if it is completely full.

**Brakes**

This vehicle has disc brakes. Disc brake pads have built-in wear indicators that make a high-pitched warning sound when the brake pads are worn and new pads are needed. The sound can come and go or be heard all the time when the vehicle is moving, except when applying the brake pedal firmly.

**Warning**

The brake wear warning sound means that soon the brakes will not work well. That could lead to a crash. When the brake wear warning sound is heard, have the vehicle serviced.

**Caution**

Continuing to drive with worn-out brake pads could result in costly brake repair.

Some driving conditions or climates can cause a brake squeal when the brakes are first applied or lightly applied. This does not mean something is wrong with the brakes. Properly torqued wheel nuts are necessary to help prevent brake pulsation. When tires are rotated, inspect brake pads for wear and evenly tighten wheel nuts in the proper sequence to torque specifications. See Capacities and Specifications on page 12-2.

Brake pads should be replaced as complete sets.

**Brake Pedal Travel**

See your dealer if the brake pedal does not return to normal height, or if there is a rapid increase in pedal travel. This could be a sign that brake service might be required.

**Brake Adjustment**

Every time the brakes are applied, with or without the vehicle moving, the brakes adjust for wear.
Replacing Brake System Parts
The braking system on a vehicle is complex. Its many parts have to be of top quality and work well together if the vehicle is to have really good braking. The vehicle was designed and tested with top-quality brake parts. When parts of the braking system are replaced, be sure to get new, approved replacement parts. If this is not done, the brakes might not work properly. For example, installing disc brake pads that are wrong for the vehicle, can change the balance between the front and rear brakes — for the worse. The braking performance expected can change in many other ways if the wrong replacement brake parts are installed.

Brake Fluid
The brake master cylinder reservoir is filled with DOT 4 brake fluid as indicated on the reservoir cap. See Underhood Compartment Overview on page 10-6 for the location of the reservoir.

There are only two reasons why the brake fluid level in the reservoir might go down:
- The brake fluid level goes down because of normal brake lining wear. When new linings are installed, the fluid level goes back up.
- A fluid leak in the brake hydraulic system can also cause a low fluid level. Have the brake hydraulic system fixed, since a leak means that sooner or later the brakes will not work well.

Do not top off the brake fluid. Adding fluid does not correct a leak. If fluid is added when the linings are worn, there will be too much fluid when new brake linings are installed. Add or remove fluid, as necessary, only when work is done on the brake hydraulic system.

Checking Brake Fluid
The brake fluid can be checked without taking off the cap by looking at the brake fluid reservoir.

The fluid level should be above MIN. If it is not, have the brake hydraulic system checked to see if there is a leak.

After work is done on the brake hydraulic system, make sure the level is above MIN but not over the MAX mark.
10-12 Vehicle Care

When the brake fluid falls to a low level, the brake system warning light comes on. See Brake System Warning Light on page 5-14.

What to Add
Use only new DOT 4 brake fluid from a sealed container. It is recommended that the brake hydraulic system be flushed and refilled with new DOT 4 fluid at a regular maintenance service every two years. See Maintenance Schedule on page 11-2 and Recommended Fluids and Lubricants on page 11-8.

Always clean the brake fluid reservoir cap and the area around the cap before removing it. This helps keep dirt from entering the reservoir.

⚠️ Warning
With the wrong kind of fluid in the brake hydraulic system, the brakes might not work well. This could cause a crash. Always use the proper brake fluid.

⚠️ Caution
• Using the wrong fluid can badly damage brake hydraulic system parts. For example, just a few drops of mineral-based oil, such as engine oil, in the brake hydraulic system can damage brake hydraulic system parts so badly that they will have to be replaced. Do not let someone put in the wrong kind of fluid.

(Continued)

Caution (Continued)
• If brake fluid is spilled on the vehicle’s painted surfaces, the paint finish can be damaged. Be careful not to spill brake fluid on the vehicle. If you do, wash it off immediately.

Battery
This vehicle has a high voltage battery and a standard 12-volt battery.

If the vehicle is in a crash, the sensing system may shut down the high voltage system. When this occurs, the high voltage battery is disconnected and the vehicle will not start. The SERVICE VEHICLE SOON message in the Driver Information Center (DIC) will be displayed. Before the vehicle can be operated again, it must be serviced at your dealer.
See “If a Crash Occurs” under Collision Damage Repair on page 13-9 for additional information. If an airbag has inflated, see What Will You See after an Airbag Inflates? on page 3-22.

Only a trained service technician with the proper knowledge and tools should inspect, test, or replace the high voltage battery. See your dealer if the high voltage battery needs service. The dealer has information on how to recycle the high voltage battery. There is also information available at http://www.recyclemybattery.com.

Keep the vehicle plugged in, even when fully charged, to keep the high voltage battery temperature ready for the next drive. This is important when outside temperatures are extremely hot or cold.

Propulsion power may be reduced in extremely cold temperatures, or if the high voltage battery is too cold. BATTERY TOO COLD, PLUG IN TO WARM will display. See Battery and Charging Messages on page 5-31.

A vehicle cover, which can reduce sun loading on the vehicle and improve high voltage battery life, is available from your dealer.

Refer to the replacement number shown on the original battery label when a new 12-volt battery is needed. The vehicle has an Absorbed Glass Mat (AGM) 12-volt battery. Installation of a standard 12-volt battery will result in reduced 12-volt battery life.

When using a 12-volt battery charger on the 12-volt AGM battery, some chargers have an AGM battery setting on the charger. If available, use the AGM setting on the charger, to limit charge voltage to 14.8 volts.

Vehicle Storage

12-volt batteries have acid that can burn you and gas that can explode. You can be badly hurt if you are not careful. See Jump Starting on page 10-55 for tips on working around a battery without getting hurt.

Up to Four Weeks

- Plug in the charge cord.
10-14 Vehicle Care

Four Weeks to 12 Months

- Discharge the high voltage battery until two or three bars remain on the battery range indicator (Battery symbol) on the instrument cluster.
- Do not plug in the charge cord.
- Remove the black negative (−) cable from the 12-volt battery and attach a trickle charger to the battery terminals or keep the 12-volt battery cables connected and trickle charge from the underhood remote positive (+) and negative (−) terminals. See Jump Starting on page 10-55 for the location of these terminals.

Caution

The vehicle is equipped with an AGM/VRLA 12-volt battery, which can be damaged by using the incorrect type of trickle charger. An AGM/VRLA-compatible charger must be used, with the appropriate setting selected. Follow the trickle charger manufacturer instructions.

Caution (Continued)

Reconnecting the 12-Volt Black Negative Cable

With the 12-volt black negative (−) cable disconnected, the hatch cannot be opened by pressing the hatch release button. If the hatch is closed and latched, reopen it:

1. Use the door key to open the driver door.
2. Manually unlock and open one of the rear doors.
3. Lower one of the rear seatbacks.
4. Pull the load floor cover forward to access and reconnect the 12-volt battery black negative (−) cable.
5. After the cable has been connected, open the hatch and then tighten the cable.

After the battery cable is reconnected, it is possible that the vehicle may not operate. If this happens, the high voltage battery may need to be charged.

Wiper Blade Replacement

Front Wiper Blade Replacement

Windshield wiper blades should be inspected for wear or cracking. See Maintenance Schedule on page 11-2.

Replacement blades come in different types and are removed in different ways. For proper windshield wiper blade length and type, see Maintenance Replacement Parts on page 11-9.
Caution

Allowing the wiper arm to touch the windshield when no wiper blade is installed could damage the windshield. Any damage that occurs would not be covered by your warranty. Do not allow the wiper arm to touch the windshield.

To replace the windshield wiper blade:

1. Pull the windshield wiper assembly away from the windshield.

2. Press the button (2) in the middle of the wiper arm connector, and pull the wiper blade away from the arm connector (1).

3. Remove the wiper blade.

4. Reverse Steps 1–3 for wiper blade replacement.

Rear Wiper Blade Replacement

1. Pull the wiper arm (1) a short distance away from the glass.

2. Push the blade (2) away from the arm (1).

3. Once the blade pin disengages from the wiper arm, remove the wiper blade by sliding the blade off the arm.

4. Reverse the steps to install the new blade.
10-16 Vehicle Care

Headlamp Aiming
Headlamp aim has been preset and should need no further adjustment. If the vehicle is damaged in a crash, the headlamp aim may be affected. If adjustment to the headlamps is necessary, see your dealer.

Bulb Replacement
For the proper type of replacement bulbs, see Replacement Bulbs on page 10-19. For any bulb-changing procedure not listed in this section, contact your dealer.

Halogen Bulbs

⚠️ Warning
Halogen bulbs have pressurized gas inside and can burst if you drop or scratch the bulb. You or others could be injured. Be sure to read and follow the instructions on the bulb package.

Headlamps, Front Turn Signal and Parking Lamps

High/Low-Beam Headlamp

1. Connector Retaining Tab
2. Connector Release
3. Headlamp Bulb

To replace a headlamp bulb:
1. Open the hood. See Hood on page 10-4.
2. Remove the connector retaining tab (1).

3. Disconnect the wiring harness connector from the bulb (3) by pressing the connector release (2) and pulling straight back.

4. Remove the bulb (3) from the headlamp assembly by turning counterclockwise and pulling straight back.

5. Install the new bulb in the headlamp assembly by turning clockwise.

6. Install the wiring harness connector to the bulb. Be sure the connector release (2) locks into place.

7. Install the connector retaining tab (1).

**Front Turn Signal/Parking Lamps**

To replace a front turn signal bulb:

1. Open the hood. See *Hood on page 10-4*.
10-18 Vehicle Care

To replace a license plate lamp bulb:
1. Remove the two screws (1) from the license plate lamp assembly.
2. Turn and pull the license plate lamp assembly down.
3. Turn the bulb socket (3) counterclockwise and pull it out of the lamp assembly.
4. Pull the bulb (2) straight out of the socket.
5. Push the new bulb into the socket.
6. Install the bulb socket (3) by turning clockwise into the license plate lamp assembly.
7. Replace the license plate lamp assembly by using the two screws to secure.

License Plate Lamp

1. Attachment Screws
2. License Plate Bulb
3. Bulb Socket

7. Reinstall the lamp assembly and two screws.

2. Remove the two screws and the lamp assembly.
3. Turn the bulb socket counterclockwise and remove the socket.
4. Press the bulb in and turn counterclockwise to remove it from the socket.
5. Press the new bulb in and turn clockwise to install the bulb into the socket.
6. Turn the bulb socket clockwise to reinstall.

For replacement bulbs not listed here, contact your dealer.

Electrical System

Electrical System Overload

The vehicle has fuses and circuit breakers to protect against an electrical system overload.

When the current electrical load is too heavy, the circuit breaker opens and closes, protecting the circuit until the current load returns to normal or the problem is fixed. This greatly reduces the chance of circuit overload and fire caused by electrical problems.

Fuses and circuit breakers protect power devices in the vehicle.

Replace a bad fuse with a new one of the identical size and rating.

If there is a problem on the road and a fuse needs to be replaced, the same amperage fuse can be borrowed. Choose some feature of the vehicle that is not needed to use and replace it as soon as possible.

Headlamp Wiring

An electrical overload may cause the lamps to go on and off, or in some cases to remain off. Have the headlamp wiring checked right away if the lamps go on and off or remain off.

Windshield Wipers

If the wiper motor overheats due to heavy snow or ice, the windshield wipers will stop until the motor cools and will then restart.

Although the circuit is protected from electrical overload, overload due to heavy snow or ice may cause wiper linkage damage. Always clear ice and heavy snow from the windshield before using the windshield wipers.

If the overload is caused by an electrical problem and not snow or ice, be sure to get it fixed.
10-20 Vehicle Care

**Fuses and Circuit Breakers**

The wiring circuits in the vehicle are protected from short circuits by a combination of fuses, circuit breakers, and fusible thermal links. This greatly reduces the chance of fires caused by electrical problems.

Look at the silver-colored band inside the fuse. If the band is broken or melted, replace the fuse. Be sure you replace a bad fuse with a new one of the identical size and rating.

Fuses of the same amperage can be temporarily borrowed from another fuse location, if a fuse goes out. Replace the fuse as soon as you can.

**Underhood Compartment Fuse Block**

The underhood compartment fuse block is on the driver side of the vehicle, near the battery.

**Caution**

Spilling liquid on any electrical component on the vehicle may damage it. Always keep the covers on any electrical component.

To access the fuses, press the tab at the back of the cover, and lift the cover.
## 10-22 Vehicle Care

The vehicle may not be equipped with all of the fuses, relays, and features shown.

### Wheels and Tires

#### Tires

Every new GM vehicle has high-quality tires made by a leading tire manufacturer. See the warranty manual for information regarding the tire warranty and where to get service. For additional information refer to the tire manufacturer.

> **Warning**

- Poorly maintained and improperly used tires are dangerous.
- Overloading the tires can cause overheating as a result of too much flexing. There could be a blowout.

(Continued)
and a serious crash. See *Vehicle Load Limits on page 9-10*.

- Underinflated tires pose the same danger as overloaded tires. The resulting crash could cause serious injury. Check all tires frequently to maintain the recommended pressure. Tire pressure should be checked when the tires are cold.

- Overinflated tires are more likely to be cut, punctured, or broken by a sudden impact — such as when hitting a pothole. Keep tires at the recommended pressure.

(Continued)

- Worn or old tires can cause a crash. If the tread is badly worn, replace them.

- Replace any tires that have been damaged by impacts with potholes, curbs, etc.

- Improperly repaired tires can cause a crash. Only the dealer or an authorized tire service center should repair, replace, dismount, and mount the tires.

- Do not spin the tires in excess of 56 km/h (35 mph) on slippery surfaces such as snow, mud, ice, etc. Excessive spinning may cause the tires to explode.

(Continued)

Winter Tires

This vehicle was not originally equipped with winter tires. Winter tires are designed for increased traction on snow and ice-covered roads. Consider installing winter tires on the vehicle if frequent driving on ice or snow covered roads is expected. See your dealer for details regarding winter tire availability and proper tire selection. Also, see *Buying New Tires on page 10-40*.

With winter tires, there may be decreased dry road traction, increased road noise, and shorter tread life. After changing to winter tires, be alert for changes in vehicle handling and braking.

If using winter tires:

- Use tires of the same brand and tread type on all four wheel positions.
10-28 Vehicle Care

- Use only radial ply tires of the same size, load range, and speed rating as the original equipment tires.

Winter tires with the same speed rating as the original equipment tires may not be available for H, V, W, Y, and ZR speed rated tires. If winter tires with a lower speed rating are chosen, never exceed the tire’s maximum speed capability.

Summer Tires

This vehicle may come with high performance summer tires. These tires have a special tread and compound that are optimized for maximum dry and wet road performance. This special tread and compound will decrease performance in cold climates, and on ice and snow. We recommend installing winter tires on the vehicle if frequent driving in cold temperatures or on snow or ice covered roads is expected. See Winter Tires on page 10-27.

Tire Sidewall Labeling

Useful information about a tire is molded into its sidewall. The examples show a typical passenger tire sidewall.

Passenger (P-Metric) Tire Example

(1) Tire Size: The tire size is a combination of letters and numbers used to define a particular tire’s width, height, aspect ratio, construction type, and service description. See the “Tire Size” illustration later in this section for more detail.

(2) TPC Spec (Tire Performance Criteria Specification): Original equipment tires designed to GM’s specific tire performance criteria have a TPC specification code molded onto the sidewall. GM’s TPC specifications meet or exceed all federal safety guidelines.

(3) DOT (Department of Transportation): The Department of Transportation (DOT) code indicates that the tire is in compliance with the U.S. Department of Transportation Motor Vehicle Safety Standards.

DOT Tire Date of Manufacture: The last four digits of the TIN indicate the tire manufactured date. The first two digits represent the week (01-52) and the last two digits, the year. For example, the third
week of the year 2010 would have a four-digit DOT date of 0310.

(4) Tire Identification Number (TIN): The letters and numbers following the DOT code are the Tire Identification Number (TIN). The TIN shows the manufacturer and plant code, tire size, and date the tire was manufactured. The TIN is molded onto both sides of the tire, although only one side may have the date of manufacture.

(5) Tire Ply Material: The type of cord and number of plies in the sidewall and under the tread.

(6) Uniform Tire Quality Grading (UTQG): Tire manufacturers are required to grade tires based on three performance factors: treadwear, traction, and temperature resistance. For more information see Uniform Tire Quality Grading on page 10-43.

(7) Maximum Cold Inflation Load Limit: Maximum load that can be carried and the maximum pressure needed to support that load.

Tire Designations

Tire Size
The following is an example of a typical passenger vehicle tire size.

The tire size means a passenger vehicle tire engineered to standards set by the U.S. Tire and Rim Association.

(2) Tire Width: The three-digit number indicates the tire section width in millimeters from sidewall to sidewall.

(3) Aspect Ratio: A two-digit number that indicates the tire height-to-width measurements. For example, if the tire size aspect ratio is 60, as shown in item 3 of the illustration, it would mean that the tire's sidewall is 60 percent as high as it is wide.

(4) Construction Code: A letter code is used to indicate the type of ply construction in the tire. The letter R means radial ply construction; the letter D means diagonal or bias ply construction; and the letter B means belted-bias ply construction.
10-30 Vehicle Care

(5) Rim Diameter: Diameter of the wheel in inches.

(6) Service Description: These characters represent the load index and speed rating of the tire. The load index represents the load carrying capacity a tire is certified to carry. The speed rating is the maximum speed a tire is certified to carry a load.

Tire Terminology and Definitions

Air Pressure: The amount of air inside the tire pressing outward on each square inch of the tire. Air pressure is expressed in kPa (kilopascal) or psi (pounds per square inch).

Accessory Weight: The combined weight of optional accessories. Some examples of optional accessories are, electric drive unit, power windows, power seats, and air conditioning.

Aspect Ratio: The relationship of a tire's height to its width.

Belt: A rubber coated layer of cords that is located between the plies and the tread. Cords may be made from steel or other reinforcing materials.

Bead: The tire bead contains steel wires wrapped by steel cords that hold the tire onto the rim.

Bias Ply Tire: A pneumatic tire in which the plies are laid at alternate angles less than 90 degrees to the centerline of the tread.

Cold Tire Pressure: The amount of air pressure in a tire, measured in kPa (kilopascal) or psi (pounds per square inch) before a tire has built up heat from driving. See Tire Pressure on page 10-32.

Curb Weight: The weight of a motor vehicle with standard and optional equipment including the maximum capacity of fuel, oil, and coolant, but without passengers and cargo.

DOT Markings: A code molded into the sidewall of a tire signifying that the tire is in compliance with the U.S. Department of Transportation (DOT) Motor Vehicle Safety Standards. The DOT code includes the Tire Identification Number (TIN), an alphanumeric designator which can also identify the tire manufacturer, production plant, brand, and date of production.

**GAWR FRT:** Gross Axle Weight Rating for the front axle. See *Vehicle Load Limits on page 9-10.*

**GAWR RR:** Gross Axle Weight Rating for the rear axle. See *Vehicle Load Limits on page 9-10.*

**Intended Outboard Sidewall:** The side of an asymmetrical tire, that must always face outward when mounted on a vehicle.

**Kilopascal (kPa):** The metric unit for air pressure.

**Light Truck (LT-Metric) Tire:** A tire used on light duty trucks and some multipurpose passenger vehicles.

**Load Index:** An assigned number ranging from 1 to 279 that corresponds to the load carrying capacity of a tire.

**Maximum Inflation Pressure:** The maximum air pressure to which a cold tire can be inflated. The maximum air pressure is molded onto the sidewall.

**Maximum Load Rating:** The load rating for a tire at the maximum permissible inflation pressure for that tire.

**Maximum Loaded Vehicle Weight:** The sum of curb weight, accessory weight, vehicle capacity weight, and production options weight.

**Normal Occupant Weight:** The number of occupants a vehicle is designed to seat multiplied by 68 kg (150 lbs). See *Vehicle Load Limits on page 9-10.*

**Occupant Distribution:** Designated seating positions.

**Outward Facing Sidewall:** The side of an asymmetrical tire that has a particular side that faces outward when mounted on a vehicle. The side of the tire that contains a whitewall, bears white lettering, or bears manufacturer, brand, and/or model name molding that is higher or deeper than the same moldings on the other sidewall of the tire.

**Passenger (P-Metric) Tire:** A tire used on passenger cars and some light duty trucks and multipurpose vehicles.

**Recommended Inflation Pressure:** Vehicle manufacturer's recommended tire inflation pressure as shown on the tire placard. See *Tire Pressure on page 10-32* and *Vehicle Load Limits on page 9-10.*
10-32 Vehicle Care

Radial Ply Tire: A pneumatic tire in which the ply cords that extend to the beads are laid at 90 degrees to the centerline of the tread.

Rim: A metal support for a tire and upon which the tire beads are seated.

Sidewall: The portion of a tire between the tread and the bead.

Speed Rating: An alphanumeric code assigned to a tire indicating the maximum speed at which a tire can operate.

Traction: The friction between the tire and the road surface. The amount of grip provided.

Tread: The portion of a tire that comes into contact with the road.

Treadwear Indicators: Narrow bands, sometimes called wear bars, that show across the tread of a tire when only 1.6 mm (1/16 in) of tread remains. See When It Is Time for New Tires on page 10-40.

UTQGS (Uniform Tire Quality Grading Standards): A tire information system that provides consumers with ratings for a tire's traction, temperature, and treadwear. Ratings are determined by tire manufacturers using government testing procedures. The ratings are molded into the sidewall of the tire. See Uniform Tire Quality Grading on page 10-43.

Vehicle Capacity Weight: The number of designated seating positions multiplied by 68 kg (150 lbs) plus the rated cargo load. See Vehicle Load Limits on page 9-10.

Vehicle Maximum Load on the Tire: Load on an individual tire due to curb weight, accessory weight, occupant weight, and cargo weight.

Vehicle Placard: A label permanently attached to a vehicle showing the vehicle's capacity weight and the original equipment tire size and recommended inflation pressure. See "Tire and Loading Information Label" under Vehicle Load Limits on page 9-10.

Tire Pressure

Tires need the correct amount of air pressure to operate effectively.
Neither tire underinflation nor overinflation is good. Underinflated tires, or tires that do not have enough air, can result in:

- Tire overloading and overheating which could lead to a blowout.
- Premature or irregular wear.
- Poor handling.
- Reduced fuel economy.

Overinflated tires, or tires that have too much air, can result in:

- Unusual wear.
- Poor handling.
- Rough ride.
- Needless damage from road hazards.

The Tire and Loading Information label on the vehicle indicates the original equipment tires and the correct cold tire inflation pressures. The recommended pressure is the minimum air pressure needed to support the vehicle’s maximum load carrying capacity.

For additional information regarding how much weight the vehicle can carry, and an example of the Tire and Loading Information label, see Vehicle Load Limits on page 9-10. How the vehicle is loaded affects vehicle handling and ride comfort. Never load the vehicle with more weight than it was designed to carry.

When to Check
Check the tires once a month or more.

How to Check
Use a good quality pocket-type gauge to check the tire pressure. Proper tire inflation cannot be determined by looking at the tire. Check the tire inflation pressure when the tires are cold, meaning the vehicle has not been driven for at least three hours or no more than 1.6 km (1 mi).

Remove the valve cap from the tire valve stem. Press the tire gauge firmly onto the valve to get the pressure measurement. If the cold tire inflation pressure matches the recommended pressure on the Tire and Loading Information label, no further adjustment is necessary.

If the inflation pressure is low, add air until the recommended pressure is reached. If the inflation pressure is high, press on the metal stem in the center
of the tire valve to release air. Re-check the tire pressure with the tire gauge.

Return the valve caps on the valve stems to keep out dirt and moisture and prevent leaks.

**Tire Pressure Monitor System**

The Tire Pressure Monitor System (TPMS) uses radio and sensor technology to check tire pressure levels. The TPMS sensors monitor the air pressure in your tires and transmit tire pressure readings to a receiver located in the vehicle.

Each tire, including the spare (if provided), should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or tire inflation pressure label. (If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label, you should determine the proper tire inflation pressure for those tires.)

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires is significantly under-inflated.

Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly under-inflated tire causes the tire to overheat and can lead to tire failure. Under-inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle's handling and stopping ability.

Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver's responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.

Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists.

When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended. TPMS malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly. Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to
ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly.

See Tire Pressure Monitor Operation on page 10-35.

**Tire Pressure Monitor Operation**

This vehicle may have a Tire Pressure Monitor System (TPMS). The TPMS is designed to warn the driver when a low tire pressure condition exists. TPMS sensors are mounted onto each tire and wheel assembly, excluding the spare tire and wheel assembly. The TPMS sensors monitor the air pressure in the tires and transmit the tire pressure readings to a receiver located in the vehicle.

When a low tire pressure condition is detected, the TPMS illuminates the low tire pressure warning light located on the instrument cluster. If the warning light comes on, stop as soon as possible and inflate the tires to the recommended pressure shown on the Tire and Loading Information label. See Vehicle Load Limits on page 9-10.

The low tire pressure warning light comes on at each drive cycle until the tires are inflated to the correct inflation pressure.

The low tire pressure warning light may come on in cool weather when the vehicle is first started, and then turn off as the vehicle is driven. This could be an early indicator that the air pressure is getting low and must be inflated to the proper pressure.

A Tire and Loading Information label shows the size of the original equipment tires and the correct inflation pressure for the tires when they are cold. See Vehicle Load Limits on page 9-10, for an example of the Tire and Loading Information label and its location. Also see Tire Pressure on page 10-32.

The TPMS can warn about a low tire pressure condition but it does not replace normal tire maintenance. See Tire Inspection on page 10-38, Tire Rotation on page 10-38 and Tires on page 10-26.

---

**Caution**

Tire sealant materials are not all the same. A non-approved tire sealant could damage the TPMS sensors. TPMS sensor damage caused by using an incorrect tire sealant is not covered by the vehicle warranty. Always use only (Continued)
10-36 Vehicle Care

Caution (Continued)

the GM approved tire sealant available through your dealer or included in the vehicle.

Factory-installed Tire Inflator Kits use a GM-approved liquid tire sealant. Using non-approved tire sealants could damage the TPMS sensors. See Tire Sealant and Compressor Kit on page 10-47 for information regarding the inflator kit materials and instructions.

TPMS Malfunction Light

The TPMS will not function properly if one or more of the TPMS sensors are missing or inoperable. When the system detects a malfunction, the low tire warning light flashes for about one minute and then stays on for the remainder of the ignition cycle. The malfunction light comes on at each ignition cycle until the problem is corrected. Some of the conditions that can cause this to come on are:

- One of the road tires has been replaced with the spare tire, if the vehicle has one. The spare tire does not have a TPMS sensor. The malfunction light should go off after the road tire is replaced and the sensor matching process is performed successfully. See "TPMS Sensor Matching Process" later in this section.

- The TPMS sensor matching process was not done or not completed successfully after rotating the tires. The malfunction light should go off after successfully completing the sensor matching process. See "TPMS Sensor Matching Process" later in this section.

- One or more TPMS sensors are missing or damaged. The malfunction light should go off when the TPMS sensors are installed and the sensor matching process is performed successfully. See your dealer for service.

- Replacement tires or wheels do not match the original equipment tires or wheels. Tires and wheels other than those recommended could prevent the TPMS from functioning properly. See Buying New Tires on page 10-40.

- Operating electronic devices or being near facilities using radio wave frequencies similar to the TPMS could cause the TPMS sensors to malfunction.
If the TPMS is not functioning properly, it cannot detect or signal a low tire condition. See your dealer for service if the TPMS malfunction light comes on and stays on.

**TPMS Sensor Matching Process**

Each TPMS sensor has a unique identification code. The identification code needs to be matched to a new tire/wheel position after rotating the tires or replacing one or more of the TPMS sensors. The TPMS sensor matching process should also be performed after replacing a spare tire with a road tire containing the TPMS sensor. The malfunction light should go off at the next ignition cycle. The sensors are matched to the tire/wheel positions, using a TPMS relearn tool, in the following order: driver side front tire, passenger side front tire, passenger side rear tire, and driver side rear. See your dealer for service or to purchase a relearn tool.

There are two minutes to match the first tire/wheel position, and five minutes overall to match all four tire/wheel positions. If it takes longer, the matching process stops and must be restarted.

The TPMS sensor matching process is:

1. Set the parking brake.
2. Put the vehicle in ON/RUN and place the vehicle in P (Park).
3. If the DIC display is minimized, press the SELECT knob to maximize it.
4. Use the SELECT knob to scroll to the Tire Pressure display screen.
5. Press and hold the SELECT knob for five seconds to begin the sensor matching process. A message displays confirming to begin the process.
6. Use the SELECT knob to select YES with the highlighted selection, and press the SELECT knob again to confirm the selection.

   The horn sounds twice to signal the receiver is in relearn mode and the TIRE LEARNING ACTIVE message displays on the DIC screen.

7. Start with the driver side front tire.
8. Place the relearn tool against the tire sidewall, near the valve stem. Then press the button to activate the TPMS sensor. A horn chirp confirms that the sensor identification code has been matched to this tire and wheel position.
9. Proceed to the passenger side front tire, and repeat the procedure in Step 8.
10. Proceed to the passenger side rear tire, and repeat the procedure in Step 8.
10-38 Vehicle Care

11. Proceed to the driver side rear tire, and repeat the procedure in Step 8. The horn sounds two times to indicate the sensor identification code has been matched to the driver side rear tire, and the TPMS sensor matching process is no longer active. The TIRE LEARNING ACTIVE message on the DIC display screen goes off.

12. Turn the vehicle off.

13. Set all four tires to the recommended air pressure level as indicated on the Tire and Loading Information label.

Tire Inspection

We recommend that the tires, including the spare tire, if the vehicle has one, be inspected for signs of wear or damage at least once a month.

Replace the tire if:

- The indicators at three or more places around the tire can be seen.
- There is cord or fabric showing through the tire’s rubber.
- The tread or sidewall is cracked, cut, or snagged deep enough to show cord or fabric.
- The tire has a bump, bulge, or split.
- The tire has a puncture, cut, or other damage that cannot be repaired well because of the size or location of the damage.

Tire Rotation

If the vehicle has non-directional tires, they should be rotated every 12,000 km/7,500 mi. See Maintenance Schedule on page 11-2.

Tires are rotated to achieve uniform wear for all tires. The first rotation is the most important.

Anytime unusual wear is noticed, rotate the tires as soon as possible, check for proper tire inflation pressure, and check for damaged tires or wheels. If the unusual wear continues after the rotation, check the wheel alignment. See When It Is Time for New Tires on page 10-40 and Wheel Replacement on page 10-44.

Directional tires should not be rotated. Each tire and wheel should be used only in the
Position it is in. Directional tires will have an arrow on the tire indicating the proper direction of rotation or will have “left” or “right” molded on the sidewall.

Different tire sizes should not be rotated front to rear.

Adjust the front and rear tires to the recommended inflation pressure on the Tire and Loading Information label after the tires have been rotated. See Tire Pressure on page 10-32 and Vehicle Load Limits on page 9-10.

Reset the Tire Pressure Monitor System. See Tire Pressure Monitor Operation on page 10-35.

Check that all wheel nuts are properly tightened. See “Wheel Nut Torque” under Capacities and Specifications on page 12-2.

Reset the Tire Pressure Monitor System. See Tire Pressure Monitor Operation on page 10-35.

Check that all wheel nuts are properly tightened. See “Wheel Nut Torque” under Capacities and Specifications on page 12-2.

**Warning**

Rust or dirt on a wheel, or on the parts to which it is fastened, can make wheel nuts become loose after time. The wheel could come off and cause an accident. When changing a wheel, remove any rust or dirt from places where the wheel attaches to the vehicle. In an emergency, a cloth or a paper towel can be used; however, use a scraper or wire brush later to remove all rust or dirt.

Lightly coat the center of the wheel hub with wheel bearing grease after a wheel change or tire rotation to prevent corrosion or rust build-up. Do not get grease on the flat wheel mounting surface or on the wheel nuts or bolts.

Use this rotation pattern if the vehicle has different size tires on the front and rear and they are non-directional.
When It Is Time for New Tires

Factors such as maintenance, temperatures, driving speeds, vehicle loading, and road conditions affect the wear rate of the tires.

The rubber in tires ages over time. This also applies to the spare tire, if the vehicle has one, even if it is never used. Multiple factors including temperatures, loading conditions, and inflation pressure maintenance affect how fast aging takes place. GM recommends that tires, including the spare if equipped, be replaced after six years, regardless of tread wear. The tire manufacturer date is the last four digits of the DOT Tire Identification Number (TIN) which is molded into one side of the tire sidewall. The first two digits represent the week (01–52) and the last two digits, the year. For example, the third week of the year 2010 would have a four-digit DOT date of 0310.

Vehicle Storage

Tires age when stored normally mounted on a parked vehicle. Park a vehicle that will be stored for at least a month in a cool, dry, clean area away from direct sunlight to slow aging. This area should be free of grease, gasoline, or other substances that can deteriorate rubber.

Packing for an extended period can cause flat spots on the tires that may result in vibrations while driving. When storing a vehicle for at least a month, remove the tires or raise the vehicle to reduce the weight from the tires.

Buying New Tires

GM has developed and matched specific tires for the vehicle. The original equipment tires installed were designed to meet General Motors Tire Performance Criteria Specification (TPC Spec) system rating. When replacement tires are needed, GM strongly recommends buying tires with the same TPC Spec rating.
GM’s exclusive TPC Spec system considers over a dozen critical specifications that impact the overall performance of the vehicle, including brake system performance, ride and handling, traction control, and tire pressure monitoring performance. GM’s TPC Spec number is molded onto the tire’s sidewall near the tire size. If the tires have an all-season tread design, the TPC spec number will be followed by MS, for mud and snow. See Tire Sidewall Labeling on page 10-28.

GM recommends replacing worn tires in complete sets of four. Uniform tread depth on all tires will help to maintain the performance of the vehicle. Braking and handling performance may be adversely affected if all the tires are not replaced at the same time. If proper rotation and maintenance have been done, all four tires should wear out at about the same time. See Tire Rotation on page 10-38. However, if it is necessary to replace only one axle set of worn tires, place the new tires on the rear axle.

Winter tires with the same speed rating as the original equipment tires may not be available for H, V, W, Y, and ZR speed rated tires. Never exceed the winter tires’ maximum speed capability when using winter tires with a lower speed rating.

**Warning**

Tires could explode during improper service. Attempting to mount or dismount a tire could cause injury or death. (Continued)

**Warning**

Mixing tires of different sizes, brands, or types may cause loss of control of the vehicle, resulting in a crash or other vehicle damage. Use the correct size, brand, and type of tire on all wheels.

**Warning**

Using bias-ply tires on the vehicle may cause the wheel rim flanges to develop cracks after many miles of driving. (Continued)
Warning (Continued)

A tire and/or wheel could fail suddenly and cause a crash. Use only radial-ply tires with the wheels on the vehicle.

If the vehicle tires must be replaced with a tire that does not have a TPC Spec number, make sure they are the same size, load range, speed rating, and construction (radial) as the original tires.

Vehicles that have a tire pressure monitoring system could give an inaccurate low-pressure warning if non-TPC Spec rated tires are installed. See Tire Pressure Monitor System on page 10-34.

Warning

If different sized wheels are used, there may not be an acceptable level of performance and safety if tires not recommended for those wheels are selected. This increases the chance of a crash and serious injury. Only use GM specific wheel and tire systems developed for the vehicle, and have them properly installed by a GM certified technician.

Different Size Tires and Wheels

If wheels or tires are installed that are a different size than the original equipment wheels and tires, vehicle performance, including its braking, ride and handling characteristics, stability, and resistance to rollover may be affected. If the vehicle has electronic systems such as antilock brakes, rollover airbags, traction control, electronic stability control, or All-Wheel Drive, the performance of these systems can also be affected.

See Buying New Tires on page 10-40 and Accessories and Modifications on page 10-2.
Uniform Tire Quality Grading

Quality grades can be found where applicable on the tire sidewall between tread shoulder and maximum section width. For example:

**Treadwear 200 Traction AA Temperature A**

The following information relates to the system developed by the United States National Highway Traffic Safety Administration (NHTSA), which grades tires by treadwear, traction, and temperature performance. This applies only to vehicles sold in the United States. The grades are molded on the sidewalls of most passenger car tires. The Uniform Tire Quality Grading (UTQG) system does not apply to deep tread, winter tires, compact spare tires, tires with nominal rim diameters of 10 to 12 inches (25 to 30 cm), or to some limited-production tires.

While the tires available on General Motors passenger cars and light trucks may vary with respect to these grades, they must also conform to federal safety requirements and additional General Motors Tire Performance Criteria (TPC) standards.

All Passenger Car Tires Must Conform to Federal Safety Requirements In Addition To These Grades.

**Treadwear**

The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on specified government test course. For example, a tire graded 150 would wear one and one-half (1½) times as well on the government course as a tire graded 100. The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices and differences in road characteristics and climate.

**Traction**

The traction grades, from highest to lowest, are AA, A, B, and C. Those grades represent the tire’s ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

Warning: The traction grade assigned to this tire is based on
10-44 Vehicle Care

straight-ahead braking traction tests, and does not include acceleration, cornering, hydroplaning, or peak traction characteristics.

Temperature
The temperature grades are A (the highest), B, and C, representing the tire’s resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a level of performance which all passenger car tires must meet under the Federal Motor Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law. Warning: The temperature grade for this tire is established for a tire that is properly inflated and not overloaded. Excessive speed, underinflation, or excessive loading, either separately or in combination, can cause heat buildup and possible tire failure.

Wheel Alignment and Tire Balance
The tires and wheels were aligned and balanced at the factory to provide the longest tire life and best overall performance. Adjustments to wheel alignment and tire balancing are not necessary on a regular basis. Consider an alignment check if there is unusual tire wear or the vehicle is significantly pulling to one side or the other. Some slight pull to the left or right, depending on the crown of the road and/or other road surface variations such as troughs or ruts, is normal. If the vehicle is vibrating when driving on a smooth road, the tires and wheels may need to be rebalanced. See your dealer for proper diagnosis.

Wheel Replacement
Replace any wheel that is bent, cracked, or badly rusted or corroded. If wheel nuts keep coming loose, the wheel, wheel bolts, and wheel nuts should be replaced. If the wheel leaks air, replace it. Some aluminum wheels can be repaired. See your dealer if any of these conditions exist.

Your dealer will know the kind of wheel that is needed. Each new wheel should have the same load-carrying capacity, diameter, width, offset, and be mounted the same way as the one it replaces.
Replace wheels, wheel bolts, wheel nuts, or Tire Pressure Monitor System (TPMS) sensors with new GM original equipment parts.

**Warning**

Using the wrong replacement wheels, wheel bolts, or wheel nuts can be dangerous. It could affect the braking and handling of the vehicle. Tires can lose air, and cause loss of control, causing a crash. Always use the correct wheel, wheel bolts, and wheel nuts for replacement.

**Caution**

The wrong wheel can also cause problems with bearing life, brake cooling, speedometer or odometer calibration, headlamp aim, bumper height, vehicle ground clearance, and tire or tire chain clearance to the body and chassis.

**Warning**

Replacing a wheel with a used one is dangerous. How it has been used or how far it has been driven may be unknown. It could fail suddenly and cause a crash. When replacing wheels, use a new GM original equipment wheel.

**Caution (Continued)**

- ground clearance, and tire or tire chain clearance to the body and chassis.

**Tire Chains**

**Warning**

Do not use tire chains. There is not enough clearance. Tire chains used on a vehicle without the proper amount of clearance can cause damage to the brakes, suspension, or other vehicle parts. The area damaged by the tire chains could cause loss of control and a crash. Use another type of traction device only if its manufacturer recommends it for the vehicle's tire size combination and road conditions. Follow that manufacturer's instructions. To avoid vehicle damage, drive slow and readjust or remove the traction device if it contacts the vehicle. Do not spin the wheels. If traction devices are used, install them on the front tires.
10-46 Vehicle Care

If a Tire Goes Flat

This vehicle has a tire sealant and compressor kit. See Tire Sealant and Compressor Kit on page 10-47. There is no spare tire, no tire changing equipment, and no place to store a tire.

It is unusual for a tire to blow out, especially if the tires are maintained properly. See Tires on page 10-26. Air goes out of a tire, it is much more likely to leak out slowly. But if there is ever a blowout, here are a few tips about what to expect and what to do.

If a front tire fails, the flat tire will create a drag that pulls the vehicle toward that side. Take your foot off the accelerator pedal and grip the steering wheel firmly. Steer to maintain lane position, and then gently brake to a stop, well off the road, if possible.

A rear blowout, particularly on a curve, acts much like a skid and may require the same correction as used in a skid. Stop pressing the accelerator pedal and steer to straighten the vehicle. It may be very bumpy and noisy. Gently brake to a stop, well off the road, if possible.

**Warning**

Driving on a flat tire will cause permanent damage to the tire. Re-inflating a tire after it has been driven on while severely underinflated or flat may cause a blowout and a serious crash. Never attempt to re-inflate a tire that has been driven on while severely underinflated or flat. Have your dealer or an authorized tire service center repair or replace the flat tire as soon as possible.

**Warning**

Lifting a vehicle and getting under it to do maintenance or repairs is dangerous without the appropriate safety equipment and training. If a jack is provided with the vehicle, it is designed only for changing a flat tire. If it is used for anything else, you or others could be badly injured or killed if the vehicle slips off the jack. If a jack is provided with the vehicle, only use it for changing a flat tire.

If a tire goes flat, avoid further tire and wheel damage by driving slowly to a level place, well off the road, if possible.

1. Turn on the hazard warning flashers. See Hazard Warning Flashers on page 6-3.

2. Park the vehicle. Set the parking brake firmly and put the shift lever in P (Park). See Shifting Into Park on page 9-17.
3. Turn off the vehicle.
4. Inspect the flat tire.

If the tire has been separated from the wheel, has damaged sidewalls, or has a puncture larger than a 6 mm (0.25 in), the tire is too severely damaged for the tire sealant and compressor kit to be effective.

If the tire has a puncture less than a 6 mm (0.25 in) in the tread area of the tire, see Tire Sealant and Compressor Kit on page 10-47.

### Tire Sealant and Compressor Kit

**Warning**

Overinflating a tire could cause the tire to rupture and you or others could be injured. Be sure to read and follow the tire sealant and compressor kit instructions and inflate the tire to its recommended pressure. Do not exceed the recommended pressure.

**Warning (Continued)**

Storing the tire sealant and compressor kit or other equipment in the passenger compartment of the vehicle could cause injury. In a sudden stop or collision, loose equipment could strike someone. Store the tire sealant and compressor kit in its original location.

If this vehicle has a tire sealant and compressor kit, there may not be a spare tire or tire changing equipment, and on some vehicles there may not be a place to store a tire.

The tire sealant and compressor can be used to temporarily seal punctures up to 6 mm (0.25 in) in the tread area of the tire. It can also be used to inflate an underinflated tire.

If the tire has been separated from the wheel, has damaged sidewalls, or has a large puncture, the tire is too severely damaged for the tire sealant and compressor kit to be effective. See Roadside Assistance Program on page 13-5.

Read and follow all of the tire sealant and compressor kit instructions.
The kit includes:

1. Sealant Canister Inlet Valve
2. Sealant/Air Hose
3. Base of Sealant Canister
4. Tire Sealant Canister
5. On/Off Button
6. Slot on Top of Compressor
7. Pressure Gauge
8. Pressure Deflation Button
9. Power Plug
10. Air Only Hose

**Tire Sealant**

Read and follow the safe handling instructions on the label adhered to the tire sealant canister (4).

Check the tire sealant expiration date on the tire sealant canister. The tire sealant canister (4) should be replaced before its expiration date. Replacement tire sealant canisters are available at your local dealer.

There is only enough sealant to seal one tire. After usage, the tire sealant canister must be replaced.

**Using the Tire Sealant and Compressor Kit to Temporarily Seal and Inflate a Punctured Tire**

When using the tire sealant and compressor kit during cold temperatures, warm the kit in a heated environment for five minutes. This will help to inflate the tire faster.

If a tire goes flat, avoid further tire and wheel damage by driving slowly to a level place. Turn on the hazard warning flashers. See *Hazard Warning Flashers on page 6-3*.

See *If a Tire Goes Flat on page 10-46* for other important safety warnings.

Do not remove any objects that have penetrated the tire.
1. Remove the tire sealant canister (4) and compressor from its storage location. See Storing the Tire Sealant and Compressor Kit on page 10-54.

2. Remove the air only hose (10) and the power plug (9) from the bottom of the compressor.

3. Place the compressor on the ground near the flat tire.

4. Attach the air only hose (10) to the sealant canister inlet valve (1) by turning it clockwise until tight.

5. Slide the base of the tire sealant canister (3) into the slot on the top of the compressor (6) to hold it upright.

   Make sure the tire valve stem is positioned close to the ground so the hose will reach it.

6. Remove the valve stem cap from the flat tire by turning it counterclockwise.

7. Attach the sealant/air hose (2) to the tire valve stem by turning it clockwise until tight.
8. Plug the power plug (9) into the accessory power outlet in the vehicle. Unplug all items from other accessory power outlets. See Power Outlets on page 5-5.

If the vehicle has an accessory power outlet, do not use the cigarette lighter.

If the vehicle only has a cigarette lighter, use the cigarette lighter.

Do not pinch the power plug cord in the door or window.

9. Start the vehicle. The vehicle must be running while using the air compressor.

10. Press the on/off button (5) to turn the tire sealant and compressor kit on.

The compressor will inject sealant and air into the tire.

The pressure gauge (7) will initially show a high pressure while the compressor pushes the sealant into the tire. Once the sealant is completely dispersed into the tire, the pressure will quickly drop and start to rise again as the tire inflates with air only.

11. Inflate the tire to the recommended inflation pressure using the pressure gauge (7). The recommended inflation pressure can be found on the Tire and Loading Information label. See Tire Pressure on page 10-32.

The pressure gauge (7) may read higher than the actual tire pressure while the compressor is on. Turn the compressor off to get an accurate pressure reading. The compressor may be turned on/off until the correct pressure is reached.

12. Press the on/off button (5) to turn the tire sealant and compressor kit off.

The tire is not sealed and will continue to leak air until the vehicle is driven and the sealant is distributed in the tire. Therefore, Steps 13–21 must be done immediately after Step 12.

Be careful while handling the tire sealant and compressor kit as it could be warm after usage.

---

Caution

If the recommended pressure cannot be reached after approximately 25 minutes, the vehicle should not be driven.

(Continued)
13. Unplug the power plug (9) from the accessory power outlet in the vehicle.

14. Turn the sealant/air hose (2) counterclockwise to remove it from the tire valve stem.

15. Replace the tire valve stem cap.

16. Remove the tire sealant canister (4) from the slot on top of the compressor (6).

17. Turn the air only hose (10) counterclockwise to remove it from the tire sealant canister inlet valve (1).

18. Turn the sealant/air hose (2) clockwise onto the sealant canister inlet valve (1) to prevent sealant leakage.

19. Return the air only hose (10) and power plug (9) back to their original storage location.

20. If the flat tire was able to inflate to the recommended inflation pressure, remove the maximum speed label from the sealant canister and place it in a highly visible location.

   Do not exceed the speed on this label until the damaged tire is repaired or replaced.

21. Return the equipment to its original storage location in the vehicle.

22. Immediately drive the vehicle 8 km (5 mi) to distribute the sealant in the tire.

23. Stop at a safe location and check the tire pressure. Refer to Steps 1–10 under “Using the Tire Sealant and Compressor Kit without Sealant to Inflate a Tire (Not Punctured).”

   If the tire pressure has fallen more than 68 kPa (10 psi) below the recommended inflation pressure, stop driving the vehicle. The tire is too severely damaged and the tire sealant cannot seal the tire. See Roadside Assistance Program on page 13-5.

   If the tire pressure has not dropped more than 68 kPa (10 psi) from the recommended inflation pressure, inflate the tire to the recommended inflation pressure.
24. Wipe off any sealant from the wheel, tire, or vehicle.

25. Dispose of the used tire sealant canister (4) at a local dealer or in accordance with local state codes and practices.

26. Replace it with a new canister available from your dealer.

27. After temporarily sealing a tire using the tire sealant and compressor kit, take the vehicle to an authorized dealer within 161 km (100 mi) of driving to have the tire repaired or replaced.

Using the Tire Sealant and Compressor Kit without Sealant to Inflate a Tire (Not Punctured)
The kit includes:

1. Sealant Canister Inlet Valve
2. Sealant/Air Hose
3. Base of Sealant Canister
4. Tire Sealant Canister
5. On/Off Button
6. Slot on Top of Compressor
7. Pressure Gauge
8. Pressure Deflation Button
9. Power Plug
10. Air Only Hose

If a tire goes flat, avoid further tire and wheel damage by driving slowly to a level place. Turn on the hazard warning flashers. See Hazard Warning Flashers on page 6-3.

See If a Tire Goes Flat on page 10-46 for other important safety warnings.
1. Remove the compressor from its storage location. See Storing the Tire Sealant and Compressor Kit on page 10-54.

2. Remove the air only hose (10) and the power plug (9) from the bottom of the compressor.

3. Place the compressor on the ground near the flat tire.
   Make sure the tire valve stem is positioned close to the ground so the hose will reach it.

4. Remove the valve stem cap from the flat tire by turning it counterclockwise.

5. Attach the air only hose (10) to the tire valve stem by turning it clockwise until tight.

6. Plug the power plug (9) into the accessory power outlet in the vehicle. Unplug all items from other accessory power outlets. See Power Outlets on page 5-5.
   If the vehicle has an accessory power outlet, do not use the cigarette lighter.
   If the vehicle only has a cigarette lighter, use the cigarette lighter.
   Do not pinch the power plug cord in the door or window.

7. Start the vehicle. The vehicle must be running while using the air compressor.

8. Press the on/off button (5) to turn the tire sealant and compressor kit on.
   The compressor will inflate the tire with air only.

9. Inflate the tire to the recommended inflation pressure using the pressure gauge (7). The recommended inflation pressure can be found on the Tire and Loading Information label. See Tire Pressure on page 10-32.

   The pressure gauge (7) may read higher than the actual tire pressure while the compressor is on. Turn the compressor off to get an accurate pressure reading. The compressor may be turned on/off until the correct pressure is reached.

   If the tire is inflated higher than the recommended pressure, adjust the excess pressure by pressing the pressure deflation button (8) until the proper pressure reading is reached. This option is only functional when using the air only hose (10).
10-54 Vehicle Care

Caution

If the recommended pressure cannot be reached after approximately 25 minutes, the vehicle should not be driven farther. The tire is too severely damaged and the tire sealant and compressor kit cannot inflate the tire. Remove the power plug from the accessory power outlet and unscrew the inflating hose from the tire valve. See Roadside Assistance Program on page 13-5.

10. Press the on/off button (5) to turn the tire sealant and compressor kit off.

Be careful while handling the compressor as it could be warm after usage.

11. Unplug the power plug (9) from the accessory power outlet in the vehicle.

12. Turn the air only hose (10) counterclockwise to remove it from the tire valve stem.

13. Replace the tire valve stem cap.

14. Return the air only hose (10) and power plug (9) back to their original storage location.

15. Return the equipment to its original storage location in the vehicle.

The tire sealant and compressor kit has accessory adapters located in a compartment on the bottom of its housing that can be used to inflate air mattresses, balls, etc.

Storing the Tire Sealant and Compressor Kit

The tire sealant and compressor kit is located in the rear storage area.

1. Lift the trim cover.

2. Remove the compressor (1) and the tire sealant canister (2).

To store the tire sealant and compressor kit, reverse the steps.
Jump Starting

For more information about the vehicle battery, see Battery on page 10-12.

If the 12-volt battery has run down, try to use another vehicle and some jumper cables to start your vehicle. Be sure to use the following steps to do it safely.

**Warning**

Batteries can hurt you. They can be dangerous because:

- They contain acid that can burn you.
- They contain gas that can explode or ignite.
- They contain enough electricity to burn you.

If you do not follow these steps exactly, some or all of these things can hurt you.

**Caution**

Ignoring these steps could result in costly damage to the vehicle that would not be covered by the vehicle warranty. Trying to start the vehicle by pushing or pulling it will not work, and it could damage the vehicle.

1. Discharged Battery Negative Grounding Point
2. Discharged Battery Positive Terminal
3. Good Battery Negative Terminal
4. Good Battery Positive Terminal

The jump start negative grounding point (1) is a stud on a bracket located to the right of the Traction Power Inverter Module (TPIM).

The jump start positive terminal (2) is on the discharged battery on the driver side of the vehicle.

The jump start positive terminal (4) and jump start negative terminal (3) are on the battery of the vehicle providing the jump start.

The positive jump start connection for the discharged battery is under a trim cover. Open the cover to expose the terminal.

1. Check the other vehicle. It must have a 12-volt battery with a negative ground system.
10-56 Vehicle Care

**Caution**

If the other vehicle does not have a 12-volt system with a negative ground, both vehicles can be damaged. Only use a vehicle that has a 12-volt system with a negative ground for jump starting.

2. Position the two vehicles so that they are not touching.

3. Set the parking brake firmly and put the shift lever in P (Park). See *Shifting Into Park* on page 9-17.

**Caution**

If any accessories are left on or plugged in during the jump starting procedure, they could be damaged. The repairs would not be covered by the vehicle warranty. Whenever possible, turn off or unplug all accessories on either vehicle when jump starting.

4. Turn the ignition to LOCK/OFF. Turn off all lights and accessories in both vehicles, except the hazard warning flashers if needed.

**Warning**

An electric fan can start up even when the propulsion system is not operating and can injure you. Keep hands, clothing and tools away from any underhood electric fan.

**Warning (Continued)**

Be sure the battery has enough water. You do not need to add water to the battery installed in your new vehicle. But if a battery has filler caps, be sure the right amount of fluid is there. If it is low, add water to take care of that first. If you do not, explosive gas could be present.

Battery fluid contains acid that can burn you. Do not get it on you. If you accidentally get it in your eyes or on your skin, flush the place with water and get medical help immediately.

**Warning**

Using a match near a battery can cause battery gas to explode. People have been hurt doing this, and some have been blinded. Use a flashlight if you need more light.

(Continued)
### Warning

Fans or other moving propulsion system parts can injure you badly. Keep your hands away from moving parts once the propulsion system is operating.

5. Connect one end of the red positive (+) cable to the positive (+) terminal on the discharged battery.

6. Connect the other end of the red positive (+) cable to the positive (+) terminal of the good battery.

7. Connect one end of the black negative (−) cable to the negative (−) terminal of the good battery.

8. Connect the other end of the black negative (−) cable to the negative (−) grounding point for the discharged battery.

9. Start the engine in the vehicle with the good battery and run the engine at idle speed for at least four minutes.

10. Try to start the vehicle that had the dead battery. If it will not start after a few tries, it probably needs service.

### Caution

If the jumper cables are connected or removed in the wrong order, electrical shorting may occur and damage the vehicle. The repairs would not be covered by the vehicle warranty. Always connect and remove the jumper cables in the correct order, making sure that the cables do not touch each other or other metal.

### Towing the Vehicle

Incorrectly towing a disabled vehicle may cause damage. The damage would not be covered by the vehicle warranty. Do not lash or hook to the chassis components — including the front and rear subframes, suspension control arms, and links — during towing and recovery of a disabled vehicle, or when securing the vehicle. Use the proper nylon strap harnesses around the tires to secure the vehicle.

Have the vehicle towed on a flatbed car carrier or a wheel lift tow truck. If a wheel lift tow truck is used, the drive wheels cannot contact the road while the vehicle is being towed. A wheel dolly must be used to lift all drive wheels off the ground.

### Jumper Cable Removal

Reverse the sequence exactly when removing the jumper cables.
10-58 Vehicle Care

Use the tow eye for towing a disabled vehicle or loading it onto a flatbed car carrier. The tow eye should not be used to recover a vehicle from an off road situation.

⚠️ Caution

Improper use of the tow eye can cause vehicle damage. Use caution and low speeds to prevent damage to the vehicle.

Carefully open the cover by using the small notch that conceals the tow eye socket.

Install the tow eye into the socket by turning it clockwise until it stops. When the tow eye is removed, reinstall the cover with the notch in the original position.

Consult your dealer or a professional towing service if the disabled vehicle must be towed.

To tow the vehicle behind another vehicle for recreational purposes, such as behind a motor home, see “Recreational Vehicle Towing” in this section.

Recreational Vehicle Towing

Recreational vehicle towing means towing the vehicle behind another vehicle – such as behind a motor home. The two most common types of recreational vehicle towing are known as dinghy towing and dolly towing. Dinghy towing is towing the vehicle with all four wheels on the ground. Dolly towing is towing the vehicle with two wheels on the ground and two wheels up on a device known as a dolly.

Here are some important things to consider before recreational vehicle towing:

- What is the towing capacity of the towing vehicle? Be sure to read the tow vehicle manufacturer's recommendations.

- How far will the vehicle be towed? Some vehicles have restrictions on how far and how long they can tow.

- Does the vehicle have the proper towing equipment? See your dealer or trailering professional for additional advice and equipment recommendations.

- Is the vehicle ready to be towed? Just as preparing the vehicle for a long trip, make sure the vehicle is prepared to be towed.
Dinghy Towing

The vehicle was not designed to be towed with all four wheels on the ground. If the vehicle must be towed, a dolly should be used. See "Dolly Towing" following.

Dolly Towing

Tow the vehicle with the two rear wheels on the ground and the front wheels on a dolly.

To tow the vehicle with two wheels on the ground and a dolly:
1. Put the front wheels on a dolly.
2. Put the shift lever in P (Park).
3. Secure the vehicle to the dolly.

Caution

If the vehicle is towed with all four wheels on the ground, the drivetrain components could be damaged. The repairs would not be covered by the vehicle warranty. Do not tow the vehicle with all four wheels on the ground.

Caution

Towing the vehicle from the rear could damage it. Also, repairs would not be covered by the vehicle warranty. Never have the vehicle towed from the rear.
10-60 Vehicle Care

Appearance Care

Exterior Care

Locks

Locks are lubricated at the factory. Use a de-icing agent only when absolutely necessary, and have the locks greased after using. See Recommended Fluids and Lubricants on page 11-8.

Washing the Vehicle

To preserve the vehicle’s finish, wash it often and out of direct sunlight.

Caution

Do not use petroleum-based, acidic, or abrasive cleaning agents as they can damage the vehicle’s paint, metal, or plastic parts. If damage occurs, it would not be covered by the vehicle warranty. Approved cleaning products can be obtained from your dealer. Follow all manufacturer directions regarding correct product usage, necessary safety precautions, and appropriate disposal of any vehicle care product.

Caution (Continued)

Avoid using high-pressure washes closer than 30 cm (12 in) to the surface of the vehicle. Use of power washers exceeding 8,274 kPa (1,200 psi) can result in damage or removal of paint and decals.

The symbol is on any underhood compartment electrical center that should not be power washed. This could cause damage that would not be covered by the vehicle warranty.

If using an automatic car wash, follow the car wash instructions. The windshield wiper and rear window wiper, if equipped, must be off. Remove any accessories that may be damaged or interfere with the car wash equipment.

Rinse the vehicle well, before washing and after, to remove all cleaning agents completely. If they are allowed to dry on the surface, they could stain.

Dry the finish with a soft, clean chamois or an all-cotton towel to avoid surface scratches and water spotting.

Finish Care

Application of aftermarket clearcoat sealant/wax materials is not recommended. If painted surfaces are damaged, see your dealer to have the damage assessed and repaired. Foreign materials such as
Calcium chloride and other salts, ice melting agents, road oil and tar, tree sap, bird droppings, chemicals from industrial chimneys, etc., can damage the vehicle’s finish if they remain on painted surfaces. Wash the vehicle as soon as possible. If necessary, use non-abrasive cleaners that are marked safe for painted surfaces to remove foreign matter.

Occasional hand waxing or mild polishing should be done to remove residue from the paint finish. See your dealer for approved cleaning products.

Do not apply waxes or polishes to uncoated plastic, vinyl, rubber, decals, simulated wood, or flat paint as damage can occur.

⚠️ Caution

Machine compounding or aggressive polishing on a basecoat/clearcoat paint finish (Continued)

⚠️ Caution (Continued)

May damage it. Use only non-abrasive waxes and polishes that are made for a basecoat/clearcoat paint finish on the vehicle.

To keep the paint finish looking new, keep the vehicle garaged or covered whenever possible.

Protecting Exterior Bright Metal Moldings

⚠️ Caution

Failure to clean and protect the bright metal moldings can result in a hazy white finish or pitting. This damage would not be covered by the vehicle warranty.

The bright metal moldings on the vehicle are aluminum. To prevent damage always follow these cleaning instructions:

- Be sure the molding is cool to the touch before applying any cleaning solution.
- Use a cleaning solution approved for aluminum. Some cleaners are highly acidic or contain alkaline substances and can damage the moldings.
- Always dilute a concentrated cleaner according to the manufacturer’s instructions.
- Do not use chrome cleaners.
- Do not use cleaners that are not intended for automotive use.
- Use a nonabrasive wax on the vehicle after washing to protect and extend the molding finish.
10-62 Vehicle Care

Cleaning Exterior Lamps/Lenses, Emblems, Decals and Stripes

Use only lukewarm or cold water, a soft cloth, and a car washing soap to clean exterior lamps, lenses and emblems. Follow instructions under "Washing the Vehicle" previously in this section.

Lamp covers are made of plastic, and some have a UV protective coating.

Use only lukewarm water, a soft cloth, and mild car washing soap to clean exterior lamps and lenses. Do not clean or wipe them while they are dry.

Do not use any of the following on lamp covers:

• Abrasive or caustic agents.
• Washer fluids and other cleaning agents in higher concentrations than suggested by the manufacturer.

• Solvents, alcohols, fuels, or other harsh cleaners.
• Ice scrapers or other hard items.
• Aftermarket appearance caps or covers while the lamps are illuminated, due to excessive heat generated.

Caution

Failure to clean lamps properly can cause damage to the lamp cover that would not be covered by the vehicle warranty.

Caution

Using wax on low gloss black finish stripes can increase the gloss level and create a non-uniform finish. Clean low gloss stripes with soap and water only.

Air Intakes

Clear debris from the air intakes, between the hood and windshield when washing the vehicle.

Windshield and Wiper Blades

Clean the outside of the windshield with glass cleaner.

Clean rubber blades using a lint-free cloth or paper towel soaked with windshield washer fluid or a mild detergent. Wash the windshield thoroughly when cleaning the blades. Bugs, road grime, sap, and a buildup of vehicle wash/wax treatments may cause wiper streaking.

Replace the wiper blades if they are worn or damaged. Damage can be caused by extreme dusty conditions, sand, salt, heat, sun, snow, and ice.

Weatherstrips

Apply Dielectric silicone grease on weatherstrips to make them last longer, seal better, and not stick or
squeak. Lubricate weatherstrips at least once a year. Hot, dry climates may require more frequent application. Black marks from rubber material on painted surfaces can be removed by rubbing with a clean cloth. See Recommended Fluids and Lubricants on page 11-8.

**Tires**

Use a stiff brush with tire cleaner to clean the tires.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Using petroleum-based tire dressing products on the vehicle may damage the paint finish and/or tires. When applying a tire dressing, always wipe off any overspray from all painted surfaces on the vehicle.</td>
</tr>
</tbody>
</table>

**Wheels and Trim — Aluminum or Chrome**

Use a soft, clean cloth with mild soap and water to clean the wheels. After rinsing thoroughly with clean water, dry with a soft, clean towel. A wax may then be applied.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chrome wheels and other chrome trim may be damaged if the vehicle is not washed after driving on roads that have been sprayed with magnesium, calcium, or sodium chloride. These chlorides are used on roads for conditions such as ice and dust. Always wash the chrome with soap and water after exposure.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>To avoid surface damage, do not use strong soaps, chemicals, abrasive polishes, cleaners, brushes, or cleaners that contain acid on aluminum or chrome-plated wheels. Use only approved cleaners. Also, never drive a vehicle with aluminum or chrome-plated wheels through an automatic car wash that uses silicone carbide tire cleaning brushes. Damage could occur and the repairs would not be covered by the vehicle warranty.</td>
</tr>
</tbody>
</table>

**Steering, Suspension, and Chassis Components**

Visually inspect steering, suspension, and chassis components for damaged, loose or missing parts or signs of wear at least once a year. Inspect the power steering for proper hook-up, binding, leaks, cracks, chafing, etc.
10-64 Vehicle Care

Visually check constant velocity joints, rubber boots, and axle seals for leaks.

Body Component Lubrication
Lubricate all key lock cylinders, hood hinges, liftgate hinges, and the charge port door unless the components are plastic. Applying silicone grease on weatherstrips with a clean cloth will make them last longer, seal better, and not stick or squeak.

Underbody Maintenance
At least twice a year, spring and fall, use plain water to flush dirt and debris from the vehicle's underbody. Your dealer or an underbody car washing system can do this. If not removed, rust and corrosion can develop.

Sheet Metal Damage
If the vehicle is damaged and requires sheet metal repair or replacement, make sure the body repair shop applies anti-corrosion material to parts repaired or replaced to restore corrosion protection.

Original manufacturer replacement parts will provide the corrosion protection while maintaining the vehicle warranty.

Finish Damage
Quickly repair minor chips and scratches with touch-up materials available from your dealer to avoid corrosion. Larger areas of finish damage can be corrected in your dealer's body and paint shop.

Chemical Paint Spotting
Airborne pollutants can fall upon and attack painted vehicle surfaces causing blotchy, ring-shaped discolorations, and small, irregular dark spots etched into the paint surface. See “Finish Care” previously in this section.

Interior Care
To prevent dirt particle abrasions, regularly clean the vehicle's interior. Immediately remove any soils. Note that newspapers or dark garments that can transfer color to home furnishings can also permanently transfer color to the vehicle's interior.

Use a soft bristle brush to remove dust from knobs and crevices on the instrument cluster. Using a mild soap solution, immediately remove hand lotions, sunscreen, and insect repellent from all interior surfaces or permanent damage may result.

Your dealer may have products for cleaning the interior. Use cleaners specifically designed for the surfaces being cleaned to prevent permanent damage. Apply all cleaners directly to the cleaning cloth. Do not spray cleaners directly on any switches or controls. Cleaners should be removed quickly. Never allow cleaners to
remain on the surface being cleaned for extended periods of time.

Cleaners may contain solvents that can become concentrated in the interior. Before using cleaners, read and adhere to all safety instructions on the label. While cleaning the interior, maintain adequate ventilation by opening the doors and windows.

To prevent damage, do not clean the interior using the following cleaners or techniques:

- Never use a razor or any other sharp object to remove a soil from any interior surface.
- Never use a brush with stiff bristles.
- Never rub any surface aggressively or with excessive pressure.
- Do not use laundry detergents or dishwashing soaps with degreasers. For liquid cleaners, use approximately 20 drops per 3.8 L (1 gal) of water. A concentrated soap solution will leave a residue that creates streaks and attracts dirt. Do not use solutions that contain strong or caustic soap.
  - Do not heavily saturate the upholstery when cleaning.
  - Do not use solvents or cleaners containing solvents.

**Interior Glass**

To clean, use a terry cloth fabric dampened with water. Wipe droplets left behind with a clean dry cloth. Commercial glass cleaners may be used, if necessary, after cleaning the interior glass with plain water.

**Caution**

To prevent scratching, never use abrasive cleaners on automotive glass. Abrasive cleaners or aggressive cleaning may damage the rear window defogger.

Cleaning the windshield with water during the first three to six months of ownership will reduce tendency to fog.

**Speaker Covers**

Vacuum around a speaker cover gently, so that the speaker will not be damaged. Clean spots with just water and mild soap.

**Coated Moldings**

Coated moldings should be cleaned.

- When lightly soiled, wipe with a sponge or soft lint-free cloth dampened with water.
- When heavily soiled, use warm soapy water.
10-66 Vehicle Care

Fabric/Carpet/Suede
Start by vacuuming the surface using a soft brush attachment. If a rotating brush attachment is being used during vacuuming, only use it on the floor carpet. Before cleaning, gently remove as much of the soil as possible using one of the following techniques:

- Gently blot liquids with a paper towel. Continue blotting until no more soil can be removed.
- For solid soils, remove as much as possible prior to vacuuming.

To clean:

1. Saturate a clean lint-free colorfast cloth with water. Microfiber cloth is recommended to prevent lint transfer to the fabric or carpet.
2. Remove excess moisture by gently wringing until water does not drip from the cleaning cloth. Start on the outside edge of the soil and gently rub toward the center. Fold the cleaning cloth to a clean area frequently to prevent forcing the soil in to the fabric.
3. Continue gently rubbing the soiled area until there is no longer any color transfer from the soil to the cleaning cloth.
4. If the soil is not completely removed, use a mild soap solution followed only by plain water.
5. If the soil is not completely removed, it may be necessary to use a commercial upholstery cleaner or spot lifter. Test a small hidden area for colorfastness before using a commercial upholstery cleaner or spot lifter. If ring formation occurs, clean the entire fabric or carpet.

Following the cleaning process, a paper towel can be used to blot excess moisture.

Cleaning High Gloss Surfaces and Vehicle Information and Radio Displays
For vehicles with high gloss surfaces or vehicle displays, use a microfiber cloth to wipe surfaces. Before wiping the surface with the microfiber cloth, use a soft bristle brush to remove dirt that could scratch the surface. Then use the microfiber cloth by gently rubbing to clean. Never use window cleaners or solvents. Periodically hand wash the microfiber cloth separately, using mild soap. Do not use bleach or fabric softener. Rinse thoroughly and air dry before next use.

⚠️ Caution
Do not attach a device with a suction cup to the display. This may cause damage and would not be covered by the warranty.
Instrument Panel, Leather, Vinyl, Other Plastic Surfaces, Low Gloss Paint Surfaces and Natural Open Pore Wood Surfaces

Use a soft microfiber cloth dampened with water to remove dust and loose dirt. For a more thorough cleaning, use a soft microfiber cloth dampened with a mild soap solution.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Soaking or saturating leather, especially perforated leather, as well as other interior surfaces, may cause permanent damage. Wipe excess moisture from these surfaces after cleaning and allow them to dry naturally. Never use heat, steam, spot lifters, or spot removers. Do not use cleaners that contain silicone or wax-based products. Cleaners containing these solvents can permanently change the appearance and feel of leather or soft trim and are not recommended.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Caution (Continued)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not use cleaners that increase gloss, especially on the instrument panel. Reflected glare can decrease visibility through the windshield under certain conditions.</td>
</tr>
</tbody>

</table>

Cargo Cover and Convenience Net

Wash with warm water and mild detergent. Do not use chlorine bleach. Rinse with cold water, and then dry completely.

Care of Safety Belts

Keep belts clean and dry.

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not bleach or dye safety belts. It may severely weaken them. In a crash, they might not be able to provide adequate protection. Clean safety belts only with mild soap and lukewarm water.</td>
</tr>
</tbody>
</table>
Floor Mats

**Warning**

If a floor mat is the wrong size or is not properly installed, it can interfere with the pedals. Interference with the pedals can cause unintended acceleration and/or increased stopping distance which can cause a crash and injury. Make sure the floor mat does not interfere with the pedals.

Use the following guidelines for proper floor mat usage:

- The original equipment floor mats were designed for your vehicle. If the floor mats need replacing, it is recommended that GM certified floor mats be purchased. Non-GM floor mats may not fit properly and may interfere with the pedals. Always check that the floor mats do not interfere with the pedals.

- Use the floor mat with the correct side up. Do not turn it over.
- Do not place anything on top of the driver side floor mat.
- Use only a single floor mat on the driver side.
- Do not place one floor mat on top of another.

**Removing and Replacing the Floor Mats**

Pull up on the rear of the floor mat to unlock each retainer and remove.

Reinstall by lining up the floor mat retainer openings over the carpet retainers and snap into position. Make sure the floor mat is properly secured in place. Verify the floor mat does not interfere with the pedals.
Service and Maintenance

General Information
Your vehicle is an important investment. This section describes the required maintenance for the vehicle. Follow this schedule to help protect against major repair expenses resulting from neglect or inadequate maintenance. It may also help to maintain the value of the vehicle if it is sold. It is the responsibility of the owner to have all required maintenance performed.

Your dealer has trained technicians who can perform required maintenance using genuine replacement parts. They have up-to-date tools and equipment for fast and accurate diagnostics. Many dealers have extended evening and Saturday hours, courtesy transportation, and online scheduling to assist with service needs.

Your dealer recognizes the importance of providing competitively priced maintenance and repair services. With trained technicians, the dealer is the place for routine maintenance such as tire rotations and additional maintenance items like tires, brakes, batteries, and wiper blades.

Caution
Damage caused by improper maintenance can lead to costly repairs and may not be covered by the vehicle warranty. Maintenance intervals, checks, inspections, recommended fluids, and lubricants are important to keep the vehicle in good working condition.

The Tire Rotation and Required Services are the responsibility of the vehicle owner. It is recommended to have your dealer perform these services every 12,000 km/7,500 mi. Proper vehicle maintenance helps to keep the vehicle in good working condition.
11-2 Service and Maintenance

The Additional Required Services are for vehicles that:

- Carry passengers and cargo within recommended limits on the Tire and Loading Information label. See Vehicle Load Limits on page 9-10.
- Are driven on reasonable road surfaces within legal driving limits.

Refer to the information in the Maintenance Schedule Additional Required Services chart.

**Warning**
Performing maintenance work can be dangerous and can cause serious injury. Perform maintenance work only if the required information, proper tools, and equipment are available. If they are not, see your dealer to have a trained technician do the work. See Doing Your Own Service Work on page 10-3.

### Maintenance Schedule

**Owner Checks and Services**

**Once a Month**

- Check the tire inflation pressures. See Tire Pressure on page 10-32.
- Inspect the tires for wear. See Tire Inspection on page 10-38.
- Check the windshield washer fluid level. See Washer Fluid on page 10-9.

### Tire Rotation and Required Services Every 12,000 km/7,500 mi

Rotate the tires, if recommended for the vehicle, and perform the following services. See Tire Rotation on page 10-38.

- Check vehicle coolant level.
- Check windshield washer fluid level. See Washer Fluid on page 10-9.
- Visually inspect windshield wiper blades for wear, cracking, or contamination. See Exterior Care on page 10-60. Replace worn or damaged wiper blades. See Wiper Blade Replacement on page 10-14.
Service and Maintenance 11-3

- Check tire inflation pressures. See Tire Pressure on page 10-32.
- Inspect tire wear. See Tire Inspection on page 10-38.
- Visually check for fluid leaks.
- Inspect brake system.
- Visually inspect steering, suspension, and chassis components for damaged, loose, or missing parts or signs of wear. See Exterior Care on page 10-60.
- Check restraint system components. See Safety System Check on page 3-15.

- Lubricate body components. See Exterior Care on page 10-60.
- Check accelerator pedal for damage, high effort, or binding. Replace if needed.
- Visually inspect gas strut for signs of wear, cracks, or other damage. Check the hold open ability of the strut. See your dealer if service is required.
- Check tire sealant expiration date, if equipped. See Tire Sealant and Compressor Kit on page 10-47.

### Footnotes — Maintenance Schedule Additional Required Services

(1) Or every two years, whichever comes first. More frequent replacement may be needed if the vehicle is driven in areas with heavy traffic, areas with poor air quality, or areas with high dust levels. Replacement may also be needed if there is a reduction in air flow, excessive window fogging, or odors.

(2) Or every five years, whichever comes first. See Cooling System (High Voltage Battery) on page 10-7 or Cooling System (TPIM, APM, and Charger Modules) on page 10-8 and Cabin Heating Coolant System on page 10-9.

(3) Or every two years, whichever comes first.

### Special Application Services

- Severe Commercial Use Vehicles Only: Lubricate chassis components every 5 000 km/3,000 mi.
- Have underbody flushing service performed. See "Underbody Maintenance" in Exterior Care on page 10-60.
Additional Maintenance and Care

Your vehicle is an important investment and caring for it properly may help to avoid future costly repairs. To maintain vehicle performance, additional maintenance services may be required. It is recommended that your dealer perform these services — their trained dealer technicians know your vehicle best. Your dealer can also perform a thorough assessment with a multi-point inspection to recommend when your vehicle may need attention. The following list is intended to explain the services and conditions to look for that may indicate services are required.

Battery
The battery supplies power to operate any additional electrical accessories.

- To avoid break-down or failure, maintain a battery with full power.
- Trained dealer technicians have the diagnostic equipment to test the battery and ensure that the connections and cables are corrosion-free.

Brakes
Brakes stop the vehicle and are crucial to safe driving.

- Signs of brake wear may include chirping, grinding, or squealing noises, or difficulty stopping.
- Trained dealer technicians have access to tools and equipment to inspect the brakes and recommend quality parts engineered for the vehicle.

Fluids
Proper fluid levels and approved fluids protect the vehicle’s systems and components. See Recommended Fluids and Lubricants on page 11-8 for GM approved fluids.

- Keep the windshield washer fluid reservoir filled.
- Instrument cluster lights may come on to indicate that fluids may be low and need to be filled.

Hoses
Hoses transport fluids and should be regularly inspected to ensure that there are no cracks or leaks. With a multi-point inspection, your dealer can inspect the hoses and advise if replacement is needed.

Lamps
Properly working headlamps, taillamps, and brake lamps are important to see and be seen on the road.

- Signs that the headlamps need attention include dimming, failure to light, cracking, or damage. The brake lamps need to be checked periodically to ensure that they light when braking.
11-6 Service and Maintenance

- With a multi-point inspection, your dealer can check the lamps and note any concerns.

**Shocks and Struts**

Shocks and struts help aid in control for a smoother ride.
- Signs of wear may include steering wheel vibration, bounce/sway while braking, longer stopping distance, or uneven tire wear.
- As part of the multi-point inspection, trained dealer technicians can visually inspect the shocks and struts for signs of leaking, blown seals, or damage, and can advise when service is needed.

**Tires**

Tires need to be properly inflated, rotated, and balanced. Maintaining the tires can save money and reduce the risk of tire failure.
- Signs that the tires need to be replaced include three or more visible treadwear indicators; cord or fabric showing through the rubber; cracks or cuts in the tread or sidewall; or a bulge or split in the tire.
- Trained dealer technicians can inspect and recommend the right tires. Your dealer can also provide tire/wheel balancing services to ensure smooth vehicle operation at all speeds. Your dealer sells and services name brand tires.

**Vehicle Care**

To help keep the vehicle looking like new, vehicle care products are available from your dealer. For information on how to clean and protect the vehicle’s interior and exterior, see *Interior Care* on page 10-64 and *Exterior Care* on page 10-60.

**Wheel Alignment**

Wheel alignment is critical for ensuring that the tires deliver optimal wear and performance.
- Signs that the alignment may need to be adjusted include pulling, improper vehicle handling, or unusual tire wear.
- Your dealer has the required equipment to ensure proper wheel alignment.
Windshield

For safety, appearance, and the best viewing, keep the windshield clean and clear.

- Signs of damage include scratches, cracks, and chips.
- Trained dealer technicians can inspect the windshield and recommend proper replacement if needed.

Wiper Blades

Wiper blades need to be cleaned and kept in good condition to provide a clear view.

- Signs of wear include streaking, skipping across the windshield, and worn or split rubber.
- Trained dealer technicians can check the wiper blades and replace them when needed.

Vehicle Identification

Service Parts Identification Label

This label, on the inside of the glove box, has the following information:

- Vehicle Identification Number (VIN).
- Model designation.
- Paint information.
- Production options and special equipment.

Do not remove this label from the vehicle.

This legal identifier is in the front corner of the instrument panel, on the left side of the vehicle. It can be seen through the windshield from outside. The VIN also appears on the Vehicle Certification and Service Parts labels and certificates of title and registration.

Customer Information

Customer Satisfaction Procedure

Your satisfaction and goodwill are important to your dealer and to Chevrolet. Normally, any concerns with the sales transaction or the operation of the vehicle will be resolved by your dealer's sales or service departments. Sometimes, however, despite the best intentions of all concerned, misunderstandings can occur. If your concern has not been resolved to your satisfaction, the following steps should be taken:

STEP ONE: Discuss your concern with a member of dealership management. Normally, concerns can be quickly resolved at that level. If the matter has already been reviewed with the sales, service, or parts manager, contact the owner of your dealership or the general manager.
13-2 Customer Information

STEP TWO: If after contacting a member of dealership management, it appears your concern cannot be resolved by your dealership without further help, in the U.S., call the Chevrolet Customer Assistance Center at 1-855-477-2754 (1-855-4-SPARK-INFO). In Canada, call General Motors of Canada Customer Care Centre at 1-800-263-3777 (English), or 1-800-263-7854 (French).

We encourage you to call the toll-free number in order to give your inquiry prompt attention. Have the following information available to give the Customer Assistance representative:

- Vehicle Identification Number (VIN). This is available from the vehicle registration or title, or the plate at the top left of the instrument panel and visible through the windshield.
- Dealership name and location.
- Vehicle delivery date and present mileage.

When contacting Chevrolet, remember that your concern will likely be resolved at a dealer’s facility. That is why we suggest following Step One first.

STEP THREE — U.S. Owners: Both General Motors and your dealer are committed to making sure you are completely satisfied with the new vehicle. However, if you continue to remain unsatisfied after following the procedure outlined in Steps One and Two, you can file with the Better Business Bureau (BBB) Auto Line® Program to enforce your rights.

The BBB Auto Line Program is an out-of-court program administered by the Council of Better Business Bureaus to settle automotive disputes regarding vehicle repairs or the interpretation of the New Vehicle Limited Warranty. Although you may be required to resort to this informal dispute resolution program prior to filing a court action, use of the program is free of charge and your case will generally be heard within 40 days. If you do not agree with the decision given in your case, you may reject it and proceed with any other venue for relief available to you.

You may contact the BBB Auto Line Program using the toll-free telephone number or write them at the following address:

BBB Auto Line Program
Council of Better Business Bureaus, Inc.
4200 Wilson Boulevard
Suite 800
Arlington, VA 22203-1838
Telephone: 1-800-955-5100
www.dr.bbb.org/goauto

This program is available in all 50 states and the District of Columbia. Eligibility is limited by vehicle age, mileage, and other factors. General Motors reserves the right to change eligibility limitations and/or discontinue its participation in this program.
STEP THREE — Canadian Owners: In the event that you do not feel your concerns have been addressed after following the procedure outlined in Steps One and Two, General Motors of Canada Limited wants you to be aware of its participation in a no-charge Mediation/Arbitration Program. General Motors of Canada Limited has committed to binding arbitration of owner disputes involving factory-related vehicle service claims. The program provides for the review of the facts involved by an impartial third party arbiter, and may include an informal hearing before the arbiter. The program is designed so that the entire dispute settlement process, from the time you file your complaint to the final decision, should be completed in about 70 days. We believe our impartial program offers advantages over courts in most jurisdictions because it is informal, quick, and free of charge.

For further information concerning eligibility in the Canadian Motor Vehicle Arbitration Plan (CAMVAP), call toll-free 1-800-207-0685, or call the General Motors Customer Care Centre, 1-800-263-3777 (English), 1-800-263-7854 (French), or write to:
The Mediation/Arbitration Program
C/O Customer Care Centre
General Motors of Canada Limited
Mail Code: CA1-163-005
1908 Colonel Sam Drive
Oshawa, Ontario L1H 8P7
The inquiry should be accompanied by the Vehicle Identification Number (VIN).

Customer Assistance Offices
Chevrolet encourages customers to call the toll-free number for assistance. However, if a customer wishes to write or e-mail Chevrolet, the letter should be addressed to:

Customer Assistance for Text Telephone (TTY) Users
To assist customers who are deaf, hard of hearing, or speech-impaired and who use Text Telephones (TTYS), Chevrolet has TTY equipment available at its Customer Assistance Center. Any TTY user in the U.S. can communicate with Chevrolet by dialing:
1-800-833-2438. TTY users in Canada can dial 1-800-263-3830.

Online Owner Center

Online Owner Experience (U.S.) my.chevrolet.com
The Chevrolet online owner experience is a one-stop resource that allows interaction with Chevrolet and keeps important vehicle-specific information in one place.

Membership Benefits

(Vehicle Information): Download owner manuals and view vehicle-specific how-to videos.
(Maintenance Information): View maintenance schedules, required alerts, OnStar onboard vehicle diagnostic information, and schedule service appointments.

(Service History): View printable dealer-recorded service records and self-recorded service records.
(Preferred Dealer Information): Select a preferred dealer and view dealer location, maps, phone numbers, and hours.
(Warranty Tracking Information): Track the vehicle’s warranty information.
(Recall Information): View active recalls or search by Vehicle Identification Number (VIN). See Vehicle Identification Number (VIN) on page 12-1.
(Other Account Information): View GM Card, SiriusXM Satellite radio, and OnStar account information.
(Live Chat Support): Chat live with online help representatives.
Visit my.chevrolet.com to register your vehicle.
Chevrolet Owner Centre (Canada) chevroletowner.ca
Take a trip to the Chevrolet Owner Centre:
- Chat live with online help representatives.
- Use the Vehicle Tools section.
- Access third party enthusiast sites and social media networks.
- Locate owner resources such as lease-end, financing, and warranty information.
- Retrieve your favorite articles, quizzes, tips, and multimedia galleries organized into the Features and Auto Care Sections.
- Download the owner manual for your vehicle, quickly and easily.
- Find the Chevrolet-recommended maintenance services for your vehicle.

GM Mobility Reimbursement Program

GM MOBILITY

This program is available to qualified applicants for cost reimbursement of eligible aftermarket adaptive equipment required for the vehicle, such as hand controls or a wheelchair/scooter lift for the vehicle.

For more information on the limited offer, visit www.gmmobility.com or call the GM Mobility Assistance Center at 1-800-323-9935. Text Telephone (TTY) users, call 1-800-833-9935.

General Motors of Canada also has a Mobility Program. Visit www.gm.ca or call 1-800-GM-DRIVE (463-7483) for details. TTY users call 1-800-263-3830.

Roadside Assistance Program

For Canadian-purchased vehicles, call 1-800-268-6800.

Service is available 24 hours a day, 365 days a year.

Calling for Assistance

When calling Roadside Assistance, have the following information ready:
- Your name, home address, and home telephone number.
- Telephone number of your location.
- Location of the vehicle.
13-6 Customer Information

- Model, year, color, and license plate number of the vehicle.
- Odometer reading, Vehicle Identification Number (VIN), and delivery date of the vehicle.
- Description of the problem.

Coverage

Services are provided up to 5 years/160,000 km (100,000 mi), whichever comes first.

In the U.S., anyone driving the vehicle is covered. In Canada, a person driving the vehicle without permission from the owner is not covered.

Roadside Assistance is not a part of the New Vehicle Limited Warranty. Chevrolet and General Motors of Canada Limited reserve the right to make any changes or discontinue the Roadside Assistance program at any time without notification.

Chevrolet and General Motors of Canada Limited reserve the right to limit services or payment to an owner or driver if they decide the claims are made too often, or the same type of claim is made many times.

Services Provided

- Emergency Charging Service: Delivery of enough charge for the vehicle to get to the nearest charging station or home, whichever is closest.
- Lock-Out Service: Service to unlock the vehicle if you are locked out. A remote unlock may be available if you have OnStar. For security reasons, the driver must present identification before this service is given.
- Emergency Tow from a Public Road or Highway: Tow to the nearest Chevrolet dealer for warranty service, or if the vehicle was in a crash and cannot be driven. Assistance is also given when the vehicle is stuck in the sand, mud, or snow.

Services Not Included in Roadside Assistance

- Impound towing caused by violation of any laws.
- Legal fines.
- Mounting, dismounting, or changing of snow tires, chains, or other traction devices.
- Towing or services for vehicles driven on a non-public road or highway.

Services Specific to Canadian-Purchased Vehicles

- Lock-Out Service: Vehicle registration is required.
- Flat Tire Change: Service to change a flat tire with the spare tire. The spare tire, if equipped, must be in good condition and properly inflated. It is the owner’s responsibility for the repair or replacement of the tire if it is not covered by the warranty.
- Battery Jump Start: Service to jump start a dead battery.
Trip Interruption Benefits and Assistance: Must be over 250 kilometers from where your trip was started to qualify. General Motors of Canada Limited requires pre-authorization, original detailed receipts, and a copy of the repair orders. Once authorization has been received, the Roadside Assistance advisor will help to make arrangements and explain how to receive payment.

Alternative Service: If assistance cannot be provided right away, the Roadside Assistance advisor may give permission to get local emergency road service. You will receive payment, up to $100, after sending the original receipt to Roadside Assistance. Mechanical failures may be covered, however any cost for parts and labor for repairs not covered by the warranty are the owner responsibility.

Scheduling Service Appointments
When the vehicle requires warranty service, contact your dealer and request an appointment. By scheduling a service appointment and advising the service consultant of your transportation needs, your dealer can help minimize your inconvenience.

If the vehicle cannot be scheduled into the service department immediately, keep driving it until it can be scheduled for service, unless, of course, the problem is safety related. If it is, please call your dealership, let them know this, and ask for instructions.

If your dealer requests you to bring the vehicle for service, you are urged to do so as early in the work day as possible to allow for same-day repair.

Courtesy Transportation Program
To enhance your ownership experience, we and our participating dealers are proud to offer Courtesy Transportation, a customer support program for vehicles with the Bumper-to-Bumper (Base Warranty Coverage period in Canada), extended powertrain, and/or hybrid-specific warranties in both the U.S. and Canada.

Several Courtesy Transportation options are available to assist in reducing inconvenience when warranty repairs are required. Courtesy Transportation is not a part of the New Vehicle Limited Warranty. A separate booklet entitled “Limited Warranty and Owner Assistance Information” furnished with each new vehicle provides detailed warranty coverage information.
13-8  Customer Information

Transportation Options
Warranty service can generally be completed while you wait. However, if you are unable to wait, GM helps to minimize inconvenience by providing several transportation options. Depending on the circumstances, your dealer can offer one of the following:

Shuttle Service
Shuttle service is the preferred means of offering Courtesy Transportation. Dealers may provide shuttle service to get you to your destination with minimal interruption of your daily schedule. This includes one-way or round-trip shuttle service within reasonable time and distance parameters of your dealer's area.

Public Transportation or Fuel Reimbursement
If the vehicle requires overnight warranty repairs, and public transportation is used instead of your dealer's shuttle service, the expense must be supported by original receipts and can only be up to the maximum amount allowed by GM for shuttle service. In addition, for U.S. customers, should you arrange transportation through a friend or relative, limited reimbursement for reasonable fuel expenses may be available. Claim amounts should reflect actual costs and be supported by original receipts. See your dealer for information regarding the allowance amounts for reimbursement of fuel or other transportation costs.

Courtesy Rental Vehicle
Your dealer may arrange to provide you with a courtesy rental vehicle or reimburse you for a rental vehicle that you obtain if the vehicle is kept for an overnight warranty repair. Rental reimbursement will be limited and must be supported by original receipts. This requires that you sign and complete a rental agreement and meet state/provincial, local, and rental vehicle provider requirements. Requirements vary and may include minimum age requirements, insurance coverage, credit card, etc. You are responsible for fuel usage charges and may also be responsible for taxes, levies, usage fees, excessive mileage, or rental usage beyond the completion of the repair.

It may not be possible to provide a like vehicle as a courtesy rental.

Additional Program Information
All program options, such as shuttle service, may not be available at every dealer. Please contact your dealer for specific information about availability. All Courtesy Transportation arrangements will be administered by appropriate dealer personnel.

General Motors reserves the right to unilaterally modify, change, or discontinue Courtesy Transportation at any time and to resolve all questions of claim eligibility pursuant to the terms and conditions described herein at its sole discretion.
Collision Damage Repair
If the vehicle is involved in a collision and it is damaged, have the damage repaired by a qualified technician using the proper equipment and quality replacement parts. Poorly performed collision repairs diminish the vehicle resale value, and safety performance can be compromised in subsequent collisions.

Collision Parts
Genuine GM Collision parts are new parts made with the same materials and construction methods as the parts with which the vehicle was originally built. Genuine GM Collision parts are the best choice to ensure that the vehicle's designed appearance, durability, and safety are preserved. The use of Genuine GM parts can help maintain the GM New Vehicle Limited Warranty.

Recycled original equipment parts may also be used for repair. These parts are typically removed from vehicles that were total losses in prior crashes. In most cases, the parts being recycled are from undamaged sections of the vehicle. A recycled original equipment GM part may be an acceptable choice to maintain the vehicle's originally designed appearance and safety performance; however, the history of these parts is not known. Such parts are not covered by the GM New Vehicle Limited Warranty, and any related failures are not covered by that warranty.

Repair Facility
GM also recommends that you choose a collision repair facility that meets your needs before you ever need collision repairs. Your dealer may have a collision repair center with GM-trained technicians and state-of-the-art equipment, or be able to recommend a collision repair center that has GM-trained technicians and comparable equipment.

Insuring the Vehicle
Protect your investment in the GM vehicle with comprehensive and collision insurance coverage. There are significant differences in the quality of coverage afforded by various insurance policy terms. Many insurance policies provide reduced protection to the GM vehicle by limiting compensation for damage repairs by using aftermarket collision parts. Some insurance companies will not specify aftermarket collision parts. When purchasing insurance, we
13-10 Customer Information

recommend that you ensure that the vehicle will be repaired with GM original equipment collision parts. If such insurance coverage is not available from your current insurance carrier, consider switching to another insurance carrier.

If the vehicle is leased, the leasing company may require you to have insurance that ensures repairs with Genuine GM Original Equipment Manufacturer (OEM) parts or Genuine Manufacturer replacement parts. Read the lease carefully, as you may be charged at the end of the lease for poor quality repairs.

If a Crash Occurs

If there has been an injury, call emergency services for help. Do not leave the scene of a crash until all matters have been taken care of. Move the vehicle only if its position puts you in danger, or you are instructed to move it by a police officer.

Give only the necessary information to police and other parties involved in the crash.

For emergency towing see Roadside Assistance Program on page 13-5.

Gather the following information:

- Driver name, address, and telephone number.
- Driver license number.
- Owner name, address, and telephone number.
- Vehicle license plate number.
- Vehicle make, model, and model year.
- Vehicle Identification Number (VIN).
- Insurance company and policy number.
- General description of the damage to the other vehicle.

Choose a reputable repair facility that uses quality replacement parts. See “Collision Parts” earlier in this section.

In a crash, the sensing system may shut down the high voltage system. See Battery on page 10-12 for important safety information. If an airbag has inflated, see What Will You See after an Airbag Inflates? on page 3-22.

If the vehicle is damaged from a crash, flood, fire, or other event it may be necessary to have the vehicle inspected. See Battery on page 10-12 and High Voltage Safety Information on page 1-14 for important safety information.

Managing the Vehicle Damage Repair Process

In the event that the vehicle requires damage repairs, GM recommends that you take an active role in its repair. If you have a pre-determined repair facility of choice, take the vehicle there, or have it towed there. Specify to the facility that any
required replacement collision parts be original equipment parts, either new Genuine GM parts or recycled original GM parts. Remember, recycled parts will not be covered by the GM vehicle warranty.

Insurance pays the bill for the repair, but you must live with the repair. Depending on your policy limits, your insurance company may initially value the repair using aftermarket parts. Discuss this with the repair professional, and insist on Genuine GM parts. Remember, if the vehicle is leased, you may be obligated to have the vehicle repaired with Genuine GM parts, even if your insurance coverage does not pay the full cost.

If another party’s insurance company is paying for the repairs, you are not obligated to accept a repair valuation based on that insurance company’s collision policy repair limits, as you have no contractual limits with that company. In such cases, you can have control of the repair and parts choices as long as the cost stays within reasonable limits.

**Service Publications**

**Ordering Information**

**Service Manuals**

Service Manuals have the diagnosis and repair information on the electric drive unit, axle, suspension, brakes, electrical, steering, body, etc.

**Service Bulletins**

Service Bulletins give additional technical service information needed to knowledgeably service General Motors cars and trucks. Each bulletin contains instructions to assist in the diagnosis and service of the vehicle.

**Owner Information**

Owner publications are written specifically for owners and intended to provide basic operational information about the vehicle. The Owner Manual includes the Maintenance Schedule for all models.

In-Portfolio: Includes a Portfolio, Owner Manual, and Warranty Booklet.

RETAIL SELL PRICE: $35.00 (U.S.) plus handling and shipping fees.

Without Portfolio: Owner Manual only.

RETAIL SELL PRICE: $25.00 (U.S.) plus handling and shipping fees.

**Current and Past Models**

Technical Service Bulletins and Manuals are available for current and past model GM vehicles.

ORDER TOLL FREE: 1-800-551-4123 Monday - Friday 8:00 AM - 6:00 PM Eastern Time

For Credit Card Orders Only (VISA-MasterCard-Discover), visit Helm, Inc. at: www.helminc.com
13-12 Customer Information

Or write to:

Plymouth, MI 48170

Prices are subject to change without notice and without incurring obligation. Allow ample time for delivery.

All listed prices are quoted in U.S. funds. Make checks payable in U.S. funds.

Reporting Safety Defects

Reporting Safety Defects to the United States Government
If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying General Motors.

If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign.

However, NHTSA cannot become involved in individual problems between you, your dealer, or General Motors.

To contact NHTSA, you may call the Vehicle Safety Hotline toll-free at 1-888-327-4236 (TTY: 1-800-424-9153); go to http://www.safercar.gov; or write to:
Administrator, NHTSA
1200 New Jersey Avenue, S.E.
Washington, D.C. 20590

You can also obtain other information about motor vehicle safety from http://www.safercar.gov.
Reporting Safety Defects to the Canadian Government

If you live in Canada, and you believe that the vehicle has a safety defect, notify Transport Canada immediately, and notify General Motors of Canada Limited. Call Transport Canada at 1-800-333-0510 or write to:
Transport Canada
Road Safety Branch
80 rue Noel
Gatineau, QC J8Z 0A1

Reporting Safety Defects to General Motors

In addition to notifying NHTSA (or Transport Canada) in a situation like this, notify General Motors.
Call 1-800-222-1020, or write:
Chevrolet Motor Division
Chevrolet Customer Assistance Center
P.O. Box 33170
Detroit, MI 48232-5170

In Canada, call 1-800-263-3777 (English) or 1-800-263-7854 (French), or write:
General Motors of Canada Limited
Customer Care Centre, Mail Code: CA1-163-005
1908 Colonel Sam Drive
Oshawa, Ontario L1H 8P7

Vehicle Data Recording and Privacy

The vehicle has a number of computers that record information about the vehicle’s performance and how it is driven. For example, the vehicle uses computer modules to monitor and control electric drive unit performance, to monitor the conditions for airbag deployment and to deploy them in a crash, and, if equipped, to provide antilock braking to help the driver control the vehicle. These modules may store data to help the dealer technician service the vehicle. Some modules may also store data about how the vehicle is operated, such as rate of fuel consumption or average speed. These modules may retain personal preferences, such as radio presets, seat positions, and temperature settings.
Event Data Recorders

This vehicle is equipped with an event data recorder (EDR). The main purpose of an EDR is to record, in certain crash or near crash-like situations, such as an air bag deployment or hitting a road obstacle, data that will assist in understanding how a vehicle's systems performed. The EDR is designed to record data related to vehicle dynamics and safety systems for a short period of time, typically 30 seconds or less. The EDR in this vehicle is designed to record such data as:

- How various systems in your vehicle were operating;
- Whether or not the driver and passenger safety belts were buckled/fastened;
- How far (if at all) the driver was depressing the accelerator and/or brake pedal; and,
- How fast the vehicle was traveling.

These data can help provide a better understanding of the circumstances in which crashes and injuries occur. NOTE: EDR data are recorded by your vehicle only if a non-trivial crash situation occurs; no data are recorded by the EDR under normal driving conditions and no personal data (e.g., name, gender, age, and crash location) are recorded. However, other parties, such as law enforcement, could combine the EDR data with the type of personally identifying data routinely acquired during a crash investigation.

To read data recorded by an EDR, special equipment is required, and access to the vehicle or the EDR is needed. In addition to the vehicle manufacturer, other parties, such as law enforcement, could combine the EDR data with the type of personally identifying data routinely acquired during a crash investigation.

GM will not access this data or share it with others except: with the consent of the vehicle owner or, if the vehicle is leased, with the consent of the lessee; in response to an official request by police or similar government office; as part of GM's defense of litigation through the discovery process; or, as required by law. Data that GM collects or receives may also be used for GM research needs or may be made available to others for research purposes, where a need is shown and the data is not tied to a specific vehicle or vehicle owner.

OnStar®

If the vehicle is equipped with OnStar® and has an active subscription, additional data may be collected through the OnStar system. This includes information about the vehicle's operation; collisions involving the vehicle; the use of the vehicle and its features; and, in certain situations, the location and approximate GPS speed of the vehicle. Refer to the
OnStar Terms and Conditions and Privacy Statement on the OnStar website.

**Radio Frequency Identification (RFID)**

RFID technology is used in some vehicles for functions such as tire pressure monitoring and ignition system security, as well as in connection with conveniences such as Remote Keyless Entry (RKE) transmitters for remote door locking/unlocking and starting, and in-vehicle transmitters for garage door openers. RFID technology in GM vehicles does not use or record personal information or link with any other GM system containing personal information.

**Radio Frequency Statement**

This vehicle has systems that operate on a radio frequency that comply with Part 15 of the Federal Communications Commission (FCC) rules and with Industry Canada Standards RSS-GEN/210/220/310.

Operation is subject to the following two conditions:

1. The device may not cause harmful interference.
2. The device must accept any interference received, including interference that may cause undesired operation of the device.

Changes or modifications to any of these systems by other than an authorized service facility could void authorization to use this equipment.
OnStar Overview

OnStar Overview

OnStar Services

Emergency .......... 14-2
Security .............. 14-2
Navigation .......... 14-2

OnStar Additional Information

OnStar Additional Information .......... 14-5

If equipped, this vehicle has a comprehensive, in-vehicle system that can connect to a live Advisor for Emergency, Security, Navigation, Connection, and Diagnostic Services.

The OnStar system status light is next to the OnStar buttons. If the status light is:

- Solid Green: System is ready.
- Flashing Green: On a call.
- Red: Indicates a problem.

Press the call button or call 1-888-4-ONSTAR (1-888-466-7827) to speak to an Advisor.

Press to:

- Make a call, end a call, or answer an incoming call.
- Give OnStar Hands-Free Calling voice commands.
- Give OnStar Turn-by-Turn Navigation voice commands. Requires the available Directions and Connections service plan.

Press to connect to a live Advisor to:

- Verify account information or update contact information.
- Get driving directions. Requires the available Directions and Connections service plan.
- Receive On-Demand Diagnostics for a check of the vehicle’s key operating systems.
- Receive Roadside Assistance.
14-2 OnStar

Press the OnStar Emergency button to get a priority connection to an Emergency Advisor available 24/7 to:

- Get help for an emergency.
- Be a Good Samaritan or respond to an AMBER Alert.
- Get assistance in severe weather or other crisis and evacuation routes.

OnStar Services

Emergency

With Automatic Crash Response, the built-in system can automatically connect to help in most crashes, even if help cannot be requested.

Press to connect to an Emergency Advisor. GPS technology is used to identify the vehicle location and can provide critical information to emergency personnel. The Advisor is also trained to offer critical assistance in emergency situations.

Security

OnStar provides services like Stolen Vehicle Assistance, Remote Ignition Block, and Roadside Assistance, if equipped. OnStar can unlock the vehicle doors remotely, if equipped with automatic door locks, and can help police locate the vehicle if it is stolen.

Navigation

OnStar navigation requires the Directions and Connections service plan.

Press to receive directions or have them sent to the vehicle navigation screen, if equipped. Destinations can also be forwarded to the vehicle from MapQuest.com. The OnStar mapping database is continuously updated. For coverage maps, see www.onstar.com (U.S.) or www.onstar.ca (Canada).

Turn-by-Turn Navigation

1. Press to connect to a live Advisor.
2. Request directions.
3. Directions are downloaded to the vehicle.
4. Follow the voice-guided commands.
Using Voice Commands During a Planned Route

Cancel Route
2. Say “Yes.” System responds: “OK, request completed, thank you, goodbye.”

Route Preview
2. Say “Route preview.” System responds with the next three maneuvers.

Repeat
2. Say “Repeat.” System responds with the last direction given, then responds with “OnStar ready,” then a tone.

Get My Destination
2. Say “Get my destination.” System responds with the address and the distance to the destination, then responds with “OnStar ready,” then a tone.

Other Navigation Services Available from OnStar

OnStar eNav: Allows subscribers to send destinations from MapQuest.com to their Turn-by-Turn Navigation or screen-based navigation system. When ready, the directions will be downloaded to the vehicle.

Destination Download: Press \=, then request the Advisor to download directions to the navigation system in the vehicle.

After the call ends, press the “Go” button on the navigation screen to begin driving directions.

If directions are downloaded to the navigation system, the route can only be canceled through the navigation system.

Destinations can also be downloaded on the go. For information about eNav, Destination Download, and coverage maps see www.onstar.com (U.S.) or www.onstar.ca (Canada).

Connections

OnStar Hands-Free Calling allows calls to be made and received from the vehicle. The vehicle can also be controlled through the OnStar RemoteLink® mobile app. For coverage maps, see www.onstar.com (U.S.) or www.onstar.ca (Canada).
OnStar Mobile App
Download the OnStar RemoteLink mobile app to select Apple®, Android™, and BlackBerry® devices to check vehicle fuel level, oil life, or tire pressure; to start the vehicle (if equipped) or unlock it; or to connect to an OnStar Advisor. For OnStar RemoteLink information and compatibility, see www.onstar.com (U.S.) or www.onstar.ca (Canada).

Hands-Free Calling
2. Say “Call.” System responds: “Please say the name or number to call.”
3. Say the entire number without pausing, including a “1” and the area code. System responds: “OK calling.”

Calling 911 Emergency
2. Say “Call.” System responds: “Please say the name or number to call.”

Retrieve My Number
2. Say “My number.” System responds: “Your OnStar Hands-Free Calling number is,” then says the number.

End a Call
Press 📞. System responds: “Call ended.”

Store a Name Tag for Speed Dialing
2. Say “Store.” System responds: “Please say the number you would like to store.”
3. Say the entire number without pausing. System responds: “Please say the name tag.”
5. Say “Yes” or say “No” to try again. System responds: “OK, storing <name tag>.”

Place a Call Using a Stored Number
2. Say “Call <name tag>.” System responds: “OK, calling <name tag>.”
Verify Minutes and Expiration
Press and say “Minutes” then “Verify” to check how many minutes remain and their expiration date.

Diagnostics
OnStar Vehicle Diagnostics will perform a vehicle check every month. It will check the electric drive unit, antilock brakes, and major vehicle systems. It also checks the tire pressures, if the vehicle is equipped with the Tire Pressure Monitoring System. If an On-Demand Diagnostics check is needed between e-mails, press , and an Advisor can run a check.

OnStar Additional Information

Transferring Service
Press to request account transfer eligibility information. The Advisor can assist in canceling or removing account information. If OnStar receives information that vehicle ownership has changed, OnStar may send a voice message to the vehicle, requesting updated account information.

Reactivation for Subsequent Owners
Press and follow the prompts to speak to an Advisor as soon as possible after acquiring the vehicle. The Advisor will update vehicle records and will explain the OnStar service offers and options available.

How OnStar Service Works
Automatic Crash Response, Emergency Services, Crisis Assist, Stolen Vehicle Assistance, Vehicle Diagnostics, Remote Door Unlock, Roadside Assistance, Turn-by-Turn Navigation, and Hands-Free Calling are available on most vehicles. Not all OnStar services are available everywhere or on all vehicles. For more information, a full description of OnStar services, system limitations, and OnStar terms and conditions:

- Call 888-4-ONSTAR (888-466-7827)
- See www.onstar.com (U.S.).
- See www.onstar.ca (Canada).
- Call TTY 1-877-248-2080
- Press to speak with an Advisor.

OnStar services require a vehicle electrical system, wireless service, and GPS satellite technologies to be available and operating for features
14-6 OnStar

to function properly. These systems may not operate if the battery is discharged or disconnected.

OnStar service cannot work unless your vehicle is in a place where OnStar has an agreement with a wireless service provider for service in that area, and the wireless service provider has coverage, network capacity, reception, and technology compatible with OnStar service. Service involving location information about the vehicle cannot work unless GPS signals are available, unobstructed, and compatible with the OnStar hardware. OnStar service may not work if the OnStar equipment is not properly installed or it has not been properly maintained. If equipment or software is added, connected, or modified, OnStar service may not work. Other problems beyond the control of OnStar may prevent service such as hills, tall buildings, tunnels, weather, electrical system design and architecture of the vehicle, damage to the vehicle in a crash, or wireless phone network congestion or jamming.

Services for People with Disabilities

Advisors provide services to help subscribers with physical disabilities and medical conditions.

Press ☎ for help with:

- Finding a hotel, restaurant, etc., that meets accessibility needs.
- Providing directions to the closest hospital or pharmacy in urgent situations.

TTY Users

OnStar has the ability to communicate to the deaf, hard-of-hearing, or speech-impaired customers while in the vehicle. The available dealer-installed TTY system can provide in-vehicle access to all of the OnStar services, except Virtual Advisor and OnStar Turn-by-Turn Navigation.

OnStar.com (U.S.) or OnStar.ca (Canada)

The website provides access to account information, allows management of the OnStar subscription, and viewing of videos of each service. Get subscription plan pricing and sign up for OnStar Vehicle Diagnostics. Click on the “My Account” tab on the home page. The website navigation and services provided may vary by country.

OnStar Personal Identification Number (PIN)

A PIN is needed to access some of the OnStar services, like Remote Door Unlock and Stolen Vehicle Assistance. You will be prompted to change the PIN the first time when speaking with an Advisor. To
change the OnStar PIN, call OnStar and provide the Advisor with the current number.

**Warranty**
OnStar equipment may be warranted as part of the New Vehicle Limited Warranty. The manufacturer of the vehicle furnishes detailed warranty information.

**Languages**
The vehicle can be programmed to respond in multiple languages. Press and ask an Advisor. Advisors are available in English, Spanish and French. Available languages may vary by country.

**Potential Issues**
OnStar cannot perform Remote Door Unlock or Stolen Vehicle Assistance after the vehicle has been off continuously for five days. After five days, OnStar can contact Roadside Assistance and a locksmith to help gain access to the vehicle.

**Global Positioning System (GPS)**
- Obstruction of the GPS can occur in a large city with tall buildings; in parking garages; around airports; in tunnels, underpasses, or parking garages; or in an area with very dense trees. If GPS signals are not available, the OnStar system should still operate to call OnStar. However, OnStar could have difficulty identifying the exact location.
- In emergency situations, OnStar can use the last stored GPS location to send to emergency responders.
- A temporary loss of GPS can cause loss of the ability to send a Turn-by-Turn Navigation route. The Advisor may give a verbal route or may ask for a call back after the vehicle is driven into an open area.

**Cellular and GPS Antennas**
Avoid placing items over or near the antenna to prevent blocking cellular and GPS signal reception. Cellular reception is required for OnStar to send remote signals to the vehicle.

**Unable to Connect to OnStar Message**
If there is limited cellular coverage or the cellular network has reached maximum capacity, this message may come on. Press to try the call again or try again after driving a few miles into another cellular area.

**Vehicle and Power Issues**
OnStar services require a vehicle electrical system, wireless service, and GPS satellite technologies to be available and operating for features to function properly. These systems may not operate if the battery is discharged or disconnected.
Add-on Electrical Equipment

The OnStar system is integrated into the electrical architecture of the vehicle. Do not add any electrical equipment. See Add-On Electrical Equipment on page 9-42. Added electrical equipment may interfere with the operation of the OnStar system and cause it to not operate.

Privacy

The complete OnStar Privacy Statement may be found at www.onstar.com (U.S.), or www.onstar.ca (Canada). Privacy-sensitive users of wireless communications are cautioned that the privacy of any information sent via wireless cellular communications cannot be assured. Third parties may unlawfully intercept or access transmissions and private communications without consent.
